YOU have done all that amateur radio communications and "know what it is like,"
don't you? Of course you do...you watched hams do it....

> You KNOW
> what it is like to be within flying distance of nastyfolks who Have The
> Bomb a

Sure I do. I've lived almost my whole life within flying distance of other
countries with nuclear weapons systems. How long would it take a Soviet missile
to reach Philadelphia?

> and want to "correct" others about NATO aircraft code names.

You're the one who underestimated the distance from Tokyo to Korea and the
Soviet Union, and who mentioned Soviet aircraft that weren't in service when
you were there....

google knows
>
> I'm wondering what YOU do "to serve your country" which is as good
> of better than actually serving with the military? Come on, TELL US.

Why?

We've already seen how you react to others who have served our country in both
military and nonmilitary government service. Like your classic "sphincter
post", the many times you put down K8MN for his State Department service, your
insults to a member of the Marine Corps, your denial of W3RV's work for the US
Navy, and many other examples. Like the "feldwebel" post.

> Show us your heroism and wonderful deeds that makes YOU so
> superior you can denigrate those of us who DID serve in the military.

Where have I "denigrated" anyone's military or other government service?

His last endeavour, copied to the list by myself, was an AOL "profile" in which he conceptualized himself as the little old man on a park bench, getting purse-whupped by Ruth Buzzy.

He's never posted a single character-specific item on himself, family, career or accomplishments..

Guess it comes from being too incompetent to handle the technology.

Many things are legal that are not ethical or right. "Legal" just means you
probably won't go to jail for it, not that it's OK to do.

> Which ones that "aren't mine", Brain?

Other people's medals that are in your posession.

The ones which were not awarded to you.

> You mean my USMC Good Conduct? Sea Service Deployment? Meritorious Unit
> Citation? National Defense?

I would hope those are yours and you didn't throw them over a fence.

> Or one's I've collected and keep in a box (which you yourself have
> admitted were "in a box")

So you do know the one's that I referred to.

Why do you play word games like that other Extra, David?

> The "Best of Luck" is yours, Brain, as the ones I've cited above may be
> found in my Service Record Book, and you are free to independently verify them
> via the Marine Corps, if you care to.

Back to playing dumb?

Which ones cited above? The ones which were awarded to you, or the
ones awarded to other people?

> And since I HAVE given them to you, we will wait for you to make that
> verification and return to us to either tell the world I was lying, or that you
> were, once again, wrong.

I've no interest in the medals awarded to you.

> The rest...well, You can "make fun" of someone collecting things if you
> care to, but you'd only be making an even bigger fool of yourself...as if THAT
> were possible...

So you say. Now prove they are not Kerry's medals. Show the
citations for the medals which weren't yours.

You are truly an amazing individual.

You were medically discharged and retired from the Corps.

You have been declared "disabled."

You have not had a single act of therapy.

You now hold a physically demanding and mentally challenging job all while still being disabled.

How do you like the "known liar" label?

>> Which ones that "aren't mine", Brain?
>
>Other people's medals that are in your posession.

Other than the medals left from my father's estate and some I've collected
(and acknowldeged as collected, not awarded), you still have yet to define
those alleged medals and to whom they belonged.

>The ones which were not awarded to you.
>
>> You mean my USMC Good Conduct? Sea Service Deployment? Meritorious
>Unit
>> Citation? National Defense?
>
>I would hope those are yours and you didn't throw them over a fence.

We'll dioscuss THAT comment at Dayton, Brain.

>> Or one's I've collected and keep in a box (which you yourself have
>> admitted were "in a box")
>
>So you do know the one's that I referred to.

No...YOU have alleged I have "other people's medals".

I do not have anyone else's medals, Brain.

>Why do you play word games like that other Extra, David?

There's no "word games" here, Brain, other than the ones YOU try to play
in order to hide your own deceit and lies.

>> The "Best of Luck" is yours, Brain, as the ones I've cited above may
>be
>> found in my Service Record Book, and you are free to independently verify
>them
>> via the Marine Corps, if you care to.
>
>Back to playing dumb?

Nope.

You've made allegations that I have awards that are not mine.

You've done it before, been asked to prove your allegation, yet have not done it.

You seem to enjoy making such false allegations and then trying to avoid taking responsibility for it.

Is this what you teach your "scouts"...?!?! Perhaps a word to the Council about your

>Which ones cited above? The ones which were awarded to you, or the
>ones awarded to other people?

Again...other than the medals from my fathers estate, to which awards of other people do you allude?

I told you what awards I received from the Marines and you certainly have it at your option to verify those awards via your own resources.

>> And since I HAVE given them to you, we will wait for you to make that
>> verification and return to us to either tell the world I was lying, or that
>you
>> were, once again, wrong.
>
>I've no interest in the medals awarded to you.

Of course you don't.

You have already established a couple of years long record of dishonesty and avoidance of the truth...why should it be any different when you are given specific details and the means to ascertain their validity...???

That's the biggest difference between you and I, Brain...

I make assertions, but then I can back them up.

You make assertions and then do your best to hope no one "calls" you on them.

YOUR biggest problem is that you are like Bozo in the middle of traffic.

>> The rest...well, You can "make fun" of someone collecting things if
>you
>> care to, but you'd only be making an even bigger fool of yourself...as if

>> were possible...
>
>So you say. Now prove they are not Kerry's medals. Show the
>citations for the medals which weren't yours.

How can I show you citations for medals that weren't mine?

You're welcome to ask the U. S Navy and the U.S. Army about Douglas B Robeson's medals.

See you at Dayton, Brain.

Steve, K4YZ

N2EY has been wallowing in the slop and slurry of late. But he thinks
he still smells sweetly.

Oh no...I have had PHYSICAL therapy, Brain...

Stated that YEARS ago. You've stated, on numerous occassions MENTAL threapy.

I've NEVER had ANY form of MENTAL therapy, Brain.

>You now hold a physically demanding and mentally challenging job all
>while still being disabled.

It is those. And within physical limits, I can do that job. You WON'T find me climbing ladders, loading heavy trucks, rapelling from mountains, pulling hoses off of the engine, or working as a Paramedic where I would not generally ahve the help to do what I do.

>How do you like the "known liar" label?

I'm not a liar, Brain. You've not even come CLOSE to showing any lie.

On the OTHER hand we still have the issue of YOU making assinine assertions that were made on the very same day AFTER facts to the contrary were made that MADE those assertions so assinine, Brain.

Not a hint of apology from you on those.

Coward AND a liar.

See you at Dayton, putz.

> and hobby activities."

That's because:

1) If an international safety frequency was interfered with, there'd
be some pretty knotty legal situations.

2) Most amateur radio communications *is* routine. Always been that
way.

3) Amateur communications cannot, be law, be commercial. They are also
not the first choice for emergency communications if other means are
available (because of the non-secure nature of amateur radio
communications).

The current batch of politician/regulators thinks BPL is needed enough
that it's worth polluting the RF spectrum to get it. That's a
political issue, not a scientific one, because the science and
experience have already shown what experience results. And it goes
right to the top.

What sort of communications goes over the BPL systems? Wanna bet most
of it is "routine communications and hobby activities"?

> Face it, Brian, we've been marginalized, and for years the FCC has been

> digital techniques."

OK, hold it right there.

What, exactly, does that mean to Joe Average Hamm?

Does it mean no more AM voice on HF, because it takes up so much
spectrum?

How about FM on VHF/UHF?

Is Baudot RTTY still OK, or should PSK-31 be the standard?

Is this what the push for WINLINK is all about? Perhaps we should
automate HF completely.

"Such a shift has a number of benefits:
>
> "- First of all, it demonstrates to POLICYMAKERS and REGULATORS
> that you are good stewards of the public's airwaves even without
> direct economic incentives.

How do they know unless the monitor the bands?

> "- Second, by using what you have efficiently, it strengthens
> your case when you need to ask for additional spectrum.

So if we use less spectrum, we get more?
>
> "- Third, by allowing more users to access the available
> allocations simultaneously, it improves the amateur experience and
> ultimately increases the attractiveness of the service to new and
> old users alike."

Yet there are petitions out there to widen the subbands intended for
spectrally inefficient modes at the expense of spectrally efficient
ones.

I recall some years back when a certain poster here was haranging us
about "better modes and modulations" and how we should be using DSSS
on HF. He was/is Executive Director of a lobbying group called "No
Code International" IIRC.

He gave us the essentially the same speech over and over. He also
spoke out forcefully against "wallpaper hunting" and "electronic
paintball wars" (his terms for award-seeking and contesting). Then
restructuring came, and he eventually got his Extra. Last I heard, his
major ham activity was chasing HF DX - on SSB. With a manufactured
transceiver.

He did some really great work on BPL - work which may have had some
effect, but not as much as we'd like.

Remember this, too: The BPL folks wanted the Part 15 limits *raised*,
and also wanted *protection from interference*. They didn't get
either.

OK, fine - how do we do that? Who defines "obsolete"?

> From those two FCC speeches, it ought to be clear to all of us that
> Amateur Radio does *not* have a "free pass" to spectrum, not will our
> current allocations be "protected" when other applications come looking
> for a place to operate.

Of course! It's *always* been that way - which is why we need a strong
national organization like ARRL.

And the fact is that we can't expect to win every battle, no matter
what happens.
>
> The handwriting is on the wall --- the FCC isn't much interested in what

> much pissing money down a rathole.

Then what do we do, Hans?

This weekend is CW SS. I plan to get on the air, probably with my
homebrew 100 W transceiver and inverted V, and try to make as many
QSOs as possible. Because I think it's fun to do so.

Is that OK? Am I being a good steward of the resources by domestic
contesting on CW? Heck, I'll bet 99% of the amateurs I work this
weekend could have been reached by email in a fraction of the time and
with no use of the radio spectrum at all - so is SS "obsolete"?

Is it OK for me to homebrew rigs the way I do? Or must it be electropolitically correct, using only SMT and the latest goodies in the Digi-Key catalog?

This whole discussion sounds like I'm being told what I should enjoy and what I shouldn't.

There was a classic original "Twilight Zone" episode starring Burgess Meredith and Dennis Weaver. Called "The Obsolete Man", about a future society in which books had been declared "obsolete". A librarian (Meredith) is declared "obsolete" because he has preserved some books and actually reads them - an activity declared to be wasteful of resources by The State. So he is eliminated.

Am I "obsolete" because of what I like to do, and what I believe in?

Hello, again, Jim

Who says history doesn't repeat. A good friend's wife stopped over last night. My friend and a friend of his were working on his computer. XP. Only an administrator account. Sigh. Used for business. Double sigh. Financial records. Triple sigh. Bids (he owns a construction business). Quadruple sigh. Broadband connection (he is certain he got bit, bad). Quintuple sigh. He can't even get to his desktop!

This one is gonna be cute. If I can't find work, I may just start doing computer work and charging folks. Right now, it is fun - but I have a feeling I am about to become beset with *fun* :))

Well folks, there you have it. Proof positive that Len sees himself as
the moderator here.

And he's essentially telling Mike, Brian and I to shut up. Or at least
to take our discussion elsewhere.

Funny thing is, when we *did* "take it elsewhere" (to 7037 kHz, to be
exact) he got all ticked off about it.

Just no pleasing some people.

1626. Amateur Radio Newsline™ Report 1421 November 5, 2004

Newsgroup: rec.radio.amateur.policy
Date: 2004-11-05 18:06:58 UTC
From: radionews@aol.com
Message-ID: <20041105130658.12009.00000115@mb-m16.aol.com>
Source record: 99474

Amateur Radio Newsline™ Report 1421 November 5, 2004

Amateur Radio Newsline report number 1421 with a release date of Friday, November 5th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. AMSAT says that the U Oh 22 ham-sat is dying and Israel says it may do away with Morse testing. Find out the details on Amateur Radio Newsline report number 1421 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: UO-22 MAY SOON BE S.K.

AMSAT U-K says that the UO-22 ham radio satellite is not in good shape, and its looks as though its useful life may be over. Bill Pasternak, WA6ITF, has more:

--

The AMSAT News Service which brought the first worked of the problem says that the cause if the satellite's demise is unknown. Bit says A-N-S, it may be related to problems with the satellites batteries which have been in space for more than 10 years.

UO-22 was launched in July 1991 from Kourou, French Guiana. It served for many years as the store and forward satellite for Amateur Radio packet and the world wide Sat Gate service. The latter is a linked series of packet radio networks in many countries.

The Ground Station control center at the University of Surrey has attempted several times in recent weeks to reactivate the UO-22 After one attempt it did come back to life, but only briefly. Other attempts have failed completely.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, reporting.

--

As time permits, the Control Station at the University of Surrey may make further attempts at reviving the ailing bird, but says AMSAT U-K it seems unlikely that they will be completely successful. (ANS)

**

HAM RADIO IN SPACE: PC SAT RECOVERY SUCCESSFUL

Meantime, better news about another ham radio satellite. The P-C Sat ham radio bird continues to work perfectly following it's recovery two weeks ago.

To use P-C Sat, just QSY your APRS mobile station to 145.825 during a pass. You should not have to change any parameters. PCsat digipeats the aliases of RELAY and WIDE just like terrestrial digipeating. (ANS)

**

RESTRUCTURING: ISRAEL MAY DROP CW REQUIREMENT

Back on Earth, word that the state of Israel may be the next nation to do away with Morse testing. At least the possibility has been raised in the latest issue of the Israel Amateur Radio Club's English language publication Hagal International.

In a brief statement in the latest on-line edition, the magazine says that a proposal to abandon Morse testing has been raised by the nations Ministry of Communications. The publication notes that many European countries have been dropping the Morse requirement and that it expects to see a rather heated discussion among Israeli hams once the Ministry opens the debate for public discussion.

At the moment Israel maintains a 5 word per minute Morse testing requirement for access to the High Frequency bands. But it is also a signatory to the pan-European C-E-P-T licensing agreement and tends to abide by whatever regulations C-E-P-T adopts for its member nations.

More on what's happening in Israeli ham radio is on line at www.iarc.org (Hagal International)

**

REFARMING THE BANDS: FCC RELOCATION OF FEDERAL USERS INCLUDES SOME AMATEUR 2.3 GHz SPECTRUM

Meantime, here in the United States, the FCC has acted to include the first five 5 megahertz of the 2390 to 2417 MHz Amateur Radio Service primary allocation that it has opened up to accommodate federal users shifted from other bands. According to the ARRL Letter, the reallocations, which also involved non amateur spectrum at 2 GHz are aimed at making room for A-W-S or advanced wireless services including so-called third-generation wireless systems. In making the announcement the FCC said it worked with the US Department of Defense and the National Telecommunications and Information Administration to allow for relocation of critical military and other operations into the 2360 to 2395 MHz band. (ARRL)

**

RESCUE RADIO: DISASTER NUMBERS FOR 2003

If you are involved in emergency communications, these numbers will be of interest to you.

According to the International Federation of Red Cross and Red Crescent Societies, natural disasters killed 76,806 people in 2003. This is three times the number of victims than died in 2002 with the rise due in part to extremes in the global climate.

The joint society report noted that an earthquake that killed 31,000 people in the Iranian city of Bam and a heat wave in Europe that killed 35,000. They say that these were major contributing factors in the higher toll victim toll.

All of this is a good reason for hams to be prepared for any emergency situation. Here in the United States the best way is by signing up for one of the many communications training courses offered by the American Radio Relay League. Just visit their website at www.arrl.org to find out what's available to you right now. (ARNewsline(tm)) from information from International Red Cross and ARRL)

TELECOMMUNICATIONS LAW: RADIO DISTRACTED DRIVERS REDUX

Some good news for those of you who operate mobile. The head of the National Transportation Safety Board says that education rather than legislation is the best approach to getting people to minimize distractions including cellular telephones when they get behind the wheel of a car.

At a recent press conference National Transportation Safety Board Chairperson Ellen Engleman-Conners said there still are no definitive studies showing that talking on a cell phone is more dangerous than any number of other motorist activities. This includes such activities as eating, reaching for a drink or adjusting the car radio.

Last summer, federal regulators announced new guidelines for states to follow when reporting crashes. Investigating agencies are now asked to say whether the driver was distracted and if that distraction was caused by a cell phone, a two-way radio, or something else.

Engleman-Conners says that having the ability to call is a safety issue and cited the example of a 16-year-old girl who's driving home from the library late at night and has a flat tire. Engleman-Conners said people are more likely to embrace safety measures if they're educated about why they are important.

New York, New Jersey, the District of Columbia and a growing number of cities and towns are prohibiting drivers from using cell phones without hands-free devices. (NTSB reports)

ENFORCEMENT: SOCAL HAMS CLAIM EX-KG6IRO JAMMED EMERGENCY COMMS

From the some people never learn department comes the latest on Jack Gerritsen, the ex KG6IRO. The same Jack Gerritsen whom the FCC has recently told to pay a $10,000 fine for operating without a license.

And you would think that would be enough to catch anyone's attention. But hams on one Los Angeles area repeater say that even with this fine facing him that he, or someone claiming to be him, recently jammed ham radio communications of an emergency at sea. And this time the United States Coast Guard is involved. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the latest:

--

The story starts with Al Geiger, KG6FB, sailing solo to Guadalupe Island on his 36 ft. sloop, following another boat which was about 20 miles ahead of him. On Tuesday night, October 26th they were caught in a bad storm. Al turned back when he lost his Jib sail in the high winds.

Both his VHF marine radio and his 2 meter ham radio amplifier had failed. Without his VHF marine radio, Al lost contact with the other boat.

The alleged jamming incident happened on the Catalina repeater on Friday morning, October 29th. The Coast Guard group in Los Angeles was interested in obtaining any information that KG6FB had about the other boat. So it had Bill Scholz, W1HIJ, who is the District Communications Officer for the Coast Guard Auxiliary, try to contact Al on the Catalina Repeater.

The QSO between KG6FB and W1HIJ started at 10:02 AM and continued off and on through about 11:40. The person alleged to be Jack Gerritsen showed up after the traffic began and refused to clear the frequency. Luckily, a tape recorder was going and here is a small part of what happened. The first voice you hear is that of Bill Scholz, W1HIJ followed by that alleged to be former ham Jack Gerritsen. This was recorded using VOX, so any dead air is missing.

--

W1HIJ: Wiskey One Hotel India Juliet, Coast Guard Auxiliary Upland Radio 1. This frequency is in use for emergency communications. This frequency in use for emergency communications. Please remain

off he frequency. This is W1HIJ, Upland Radio 1 out."

Unidentified Transmission: "Yeah whats your phone number. Ive never heard any emergencies on this damn frequency. You ever heard of 911 stupid?"

Repeater: "beep"

--

The station believed to be Gerritsen continued on. Not only did he pester W1HIJ verbally. He also played what can best be described as political recordings over and over again.

Soon, other stations believed to have come over from the 147.435 MHz repeater -- the one calling itself the "Animal Farm" -- also appeared on the Calalina machine. They began taunting and jamming the station believed to be Gerritsen, tying up the Catalina repeater frequency much of the time. The combined garbage made it impossible to continue the passing of emergency traffic and it was not until much later in the day that the other boat was confirmed as having arrived at Guadalupe Island, and that KG6FB had made it safely to Whites Landing.

Copies of the full recording of this incident have reportedly been forwarded to several government agencies that handle malicious interference to ongoing emergency radio traffic. We will have to see of any of them follow up on this one.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Another ham, Tim Thompson, W6DCE, provided us with whats purported to be a phone message left on Gerritsen's answering machine by local FCC inspectors. The investigators reportedly went to his house on a complaint from the Coast Guard to perform a station inspection but were refused entry. On the recording they urge the person inside to permit them in. This, to avoid added fines or possible arrest.

You may recall that the last person prosecuted for bothering an emergency communications service was Rajib Mitra, of Brookfield, Wiisconsin. As reported here on Newsline, last June Mitra was convicted under the United States "Patriot Act" of interference to the communications of a local police department. He was sentenced to 8 years in a Federal prison for that crime. (ARNewsline (tm) with infrormation from K6PZW, W1HIJ, W6DCE, others)

**

ENFORCEMENT: YOU CAN'T OPERATE THERE

A pair of hams who operated the wrong part of 20 meters have caught the eye of the FCC enforcement folks. The agency's Daryl Duckworth, NN0W, has the details:

--

Duckworth: "Two warning notices went out for operation on 14.010 MHz. The first went to K0HUU, Donald Mullen, of Springfield, Missouri, for operation outside General class privileges. The second went to W6QEU, Peter Onnigian, of Sacramento, California, for operating outside Advanced class privileges."

--

Both operators were advised that such operation my lead to revocation of their licenses or to a monetary forfeiture. Also that no renewal or upgrade application will be considered until this matter is resolved. They were given 20 days from the October 18th date of the FCC's letter to them to respond. (FCC, RAIN)

**

ON THE WEB: QRZ.COM WEBSERVER DE-LISTS K1MAN

A popular ham radio callsign webserver has removed the listing of International Amateur Radio Network net manager Glenn Baxter, K1MAN, from its database. In a posting to his own QRZ.com website, owner Fred Lloyd, AA7BQ, says that he took the action because the staff at QRZ reached the collective opinion that K1MAN does not represent a view of amateur radio activities that is conducive to the furtherance of the hobby. His words -- not ours.

Lloyd has also started what he calls an informal survey of QRZ.com users to get their feelings as to whether or not this is the right course of action. As of Wednesday, November 4th, some 387 hams say that they support QRZ's decision to de-list K1MAN while only 19 feel the listing for Baxter should remain.

You can follow this one for yourself. Its on-line at www.qrz.com (QRZ.COM)

**

TOWER PROBLEMS: EXPLOSION ROCKS TEXAS TRANSMISSION TOWER

Remember our recent story about a fire bug in the Pacific Northwest burning down radio towers. Fires that cost one ham his home. Well that fire bug still has not been caught and authorities are still looking for leads in the case.

And while we do not know if there is any connection, but news reports say that Federal investigators are now looking into the circumstances surrounding an explosion at a power line transmission tower near Dallas, Texas on October 27th. The reports say that one leg of the support structure appeared to have been severed in two places.

Agents from the Federal Bureau of Investigation, the Bureau of Alcohol, Tobacco and Firearms, along with local police, are investigating. (Published reports)

**

TOWER PROBLEMS: VANDAL FELLS TWO TOWERS IN TEXAS

But that's not the only tower vandalism to report this week. Another instance is in Milwaukee, Wisconsin where a company that owns two power transmission towers that were deliberately toppled two weeks ago says that it is willing to pay big bucks to have the person who did it put behind prison bars.

The American Transmission Company is offering a $10,000 reward for information that leads to the arrest and conviction of those responsible for the criminal act that left 17,000 customers without electrical service. News reports in the one say that a person or persons unknown removed the base bolts from the eighty five foot towers causing them to tumble.

American Transmission says that it is installing two temporary wooden structures to support the downed power lines until such time as replacements can be put in. Meantime investigators want the person behind these criminal acts behind bars before he or she strikes again. (Published reports)

**

THE HAM BUSINESS CENTER: NEW RELEASES FROM CSS

From the ham radio business world comes word that Creative Services Software of Muscle Shoals, Alabama has announced the release of PacTerm 3 for Windows and P k Term 3 for Windows for preview. This latest software includes a new user interface in a single window, a built in generic logging program, the M T 63 soundcard mode, a PSK 62.5 mode, TCP/IP support and much much more. Both programs include a 30 day full featured demo version, so hams and MARS users can try before they buy. Creative Software Services is on the web at www.cssincorp.com (CSS)

**

THE SOCIAL SCENE: GREAT LAKES SUPER SWAP IN MICHIGAN IN NOVEMBER

Meantime, the combined 2004 Great Lakes Super Swap and ARRL Michigan State Convention takes place November 5th and 6th at the Harbor Lights School in Holland, Michigan. For more information on this fun event take your web browser over to www.hollandarc.org and click on the words swap info. (Via Internet)

THE SOCIAL SCENE: HAMVENTION(r) ANNOUNCES 2005 THEME

"Bringing Hams Together From Around The World" will be the theme of the next Dayton Hamvention now slated for May 20th to the 22nd of 2005. The announcement was made this past week by the events General Chairman Gary Des Combes, N8EMO, who added a personal thank you to everyone who made suggestions and helped to select this theme. Des Combes said that all of these efforts were very valuable and sincerely appreciated. More information about Hamvention 2005 is on the World Wide Web at www.hamvention.org (Hamvention (r))

**

A HELPING HAM: GET WELL WISHES TO W4TBU

If you read the QCWA Journal, then you may remember an article about "Ultimate Elmer" Shirley Wilkerson, Jr., W4TBU, that appeared in the winter 2003 edition. A ham who loves sharing the hobby with others.

Now, Tom Webb, W4YOK, says over the QCWA remailer that Wilkerson, who is his close friend and personal Elmer, is seriously ill and confined to a hospital.

Tom says that Shirley is 84 years old and the situation has him depressed and he is refusing treatment. Tom says that this is so unlike Shirley who he describes as a person who loves life so much. And W4YOK says that hearing words of encouragement from the ham community might really help.

So we are going to ask that you take a moment, write out a QSL or post card and send it to W4TBU. Tell him how much you appreciate what he has done to make ham radio a better place.

Send your card to Shirley Wilkerson, Jr., W4TBU, Room 314, Community Methodist Hospital, Henderson, Kentucky, 42420.

Hams traditionally support one another in time of need. This is one of those times. (W4YOK, QCWA)

**

HAM RADIO IN SPACE: FINNISH CONTACT SUCCESSFUL

Students at a Senior High School, in Pori, Finland, spoke to cosmonaut Yuri Shargin, on October 19. They were able to ask 12

questions before the International Space Station went over the horizon. Students, teachers and members of the media attended the event. (ARISS)

**

WORLDBEAT - AUSTRALIA: COST PROHIBITIVE TO KEEP REPEATERS ON THE AIR

Several repeaters down-under are now off the air. This after Australia's telephone provider Telstra put site rental beyond the economic reach of ham radio. Felix Scerri, VK4FUQ, of the WIA News Service reports:

--

From 22nd October the UHF repeaters co sited on the Black Mountain Telstra Tower in Canberra have been removed from service. Telstra recently carried out an audit of the site and discovered there was no rental agreement that could be found for this ham gear to be on site.

After negotiations with Telstra, the rental offer made by Telstra is beyond the economic resources of the Canberra Region Amateur Radio Club and, sadly they had no option but to remove the equipment by Today October 31st .

Better news however is at Black Hill the ACT's 146.900 MHz service is on air however it may subject to further interruptions. Following last years bush fires there has been a considerable amount of work done by the Tibinbilla tracking station staff to get the site fully operational. The task of the refurbishment and repairs is almost complete.

--

The repeaters that lost their home operated on 438.025 MHz and 439.950 Mhz. They served the greater Canberra area. (WIA)

**

WORLDBEAT: UK 5 MHZ BEACONS COMING SOON

The Radio Society of Great Britain says that is close to installing and operating two new beacons on 5 point 290 kHz. The new beacons will operate under the callsigns GB3WES and GB3ORK. GB3WES will be located in Cumbria and GB3ORK in the Orkney Islands. Both will have a stepped transmit power sequence and a 30-second sounder sequence of 0.5ms pulses at 40 Hz and identical to that of the Oxfordshire GB3RAL beacon.

The new beacons will have transmit times will follow GB3RAL by one and two minutes respectively. Together the three beacons will provide an excellent spread of signal source from across Great Britain and offering experimenters worldwide a unique opportunity to study propagation effects at 5 MHz from their own QTH. (GB2RS)

**

ON THE AIR: USS SALEM ARC COMMEMORATES VETERANS DAY

In news of special event operations, the radio group supporting the U-S-S Salem will be activating K1USN on November 11th for Veterans Day. Activities will be on most bands using CW and SSB. During the operation the ship will be open to the public as well as radio amateurs. A special QSL has been created from the official 2004 Veterans Day Poster. Stateside QSL requests with a S.A.S.E. go to Harold Pugh, K1RV, at his callbook address. DX cards go via the W1 Bureau. More information is on-line at www.qsl.net/k1usn. (1VV)

**

ON THE AIR: VoIP TRANSCEIVER TO BE INSTALLED IN BAGHDAD

Former 73 Magazine Editor Keith Lamonica, W7DXX, plans to install a fully operational remotely controlled transceiver in Baghdad, Iraq, in the next few weeks. YI9DXX this will be available for any ham in the world who is registered with W7DXX to use his Voice over I P Internet system. For more information take your web browser over to www.lamonica.com and peruse the information you will find there. (G3ZHI)

**

DX

In D-X, word that Team Vertical will be operational from Taveuni Island, Fiji from November 20th to the 30th. Operations will be on 160 through 10 meters, mainly on CW. The group will have 6 low-power stations and ocean-front vertical arrays on all bands. QSL all Team Vertical 3-D-2 stations via WA4WTG. (Team Vertical)

And YT1CS who is currently active portable 5Z4 from Nairobi, has arranged a side trip to Lamu Island. He will be there through the 11th of November on 80 to 10 meters SSB using 100 watts to verticals and inverted-Vees. QSL as directed on the air. (RSGB)

**

THAT FINAL ITEM: RFID FOR COWS

And finally this week a cow sized idea. in fact, its an idea that combines radio R-F-I-D tags and cows in a system called the National Livestock Identification System or simply N-L-I-S for short. John Williams, VK2BUI, is in New South Whales, Australia, where the system is being tried out:

--

NLIS uses machine-readable Radio Frequency Identification (RFID) devices to identify cattle. Cattle are tagged with NLIS devices only once in their life. Cattle identified with NLIS devices can be electronically read as they move through the livestock chain. At

time of reading, each owner's PIC can be recorded and linked to the NLIS device. This transaction information is then stored in the secure central NLIS database.

RFID eliminates the need for "line of sight" reading necessary with barcode systems. The signal can penetrate through body tissue, wood, plastic, mud, manure and more. RFID in this application is passive and therefore requires no battery, meaning it will last for the life of the animal.

--

With Japan set to reopen import of U-S beef, government officials in that nation feel that it is more important than ever to be able to trace every animal from birth to marketplace. Many believe that a National Livestock Identification System using R-F-I-D tagging is the logical answer. (WIA News)

"N2EY" <N2EY@AOL.COM> wrote

>
> Am I "obsolete" because of what I like to do, and what I believe in?
>

Jim, your message is a classic collection of "shoot the messenger". The comments in my message aren't mine; they are direct quotes from hams inside the FCC. I think it's safe to say they reflect 'official' regulatory views. Further, it is my opinion that those comments weren't meant as "handwriting on the wall" but as huge billboards painted in international-orange to send our service an unmistakeable message.

Distill it all down, and the essence of that message is "You guys have a playground which is a prime piece of RF "real estate". Unless we see some 'contributions to the radio art' pretty damn soon, we're going to bulldoze the place and put it up for sale to commercial interests."

In a misdirdected response ARRL has erected an expensive political soapbox on the street corner with huge banners saying "Save Our Playground". The FCC is ignoring that soapbox and putting up more billboards with unflattering descriptions like "routine communications and hobby activities".

It is the contention of a growing number of active and concerned hams that ARRL needs to quit spending our money on political posturing, and redirect their attention and our money into regrowing the technological reputation which earned us that playground in the first place.

73, de Hans, K0HB

In article <20041105070227.10298.00000008@mb-m25.aol.com>, n2ey@aol.comSPAMNO (N2EY) writes:

>We've already seen how you react to others who have served our country in >both military and nonmilitary government service.

Right...for making lots of brags and claims and implied "combat experience" as in "seven hostile actions." :-)

Or those who were "in Vietnam" yet can't be specific about what they did or where.

Or those who "served the country" by being a minor civilian sort for a defense contractor on a USN aircraft carrier. [I tend to dismiss the claims of "taking photographs for naval intelligence" as having any importance]

"Dave" wants his State experiences enobled as wonderful radio acts for the nation or something. State Department just doesn't have the size or scope to compete with the U.S. military commo facilities. The DSN has taken over the day-to-day task for that and the U.S. Army Signal Corps has long served State for the vital sensitive communications means (which "Dave" will immediately argue since he is most sensitive to any sort of negativism to "Dave").

Ooooo...I've "insulted" a member of the USMC? Horrors!

Yes, I was unaware that the USMC is hero of the U.S. military and the savior of all wars and is therefore ALLOWED (perhaps encouraged) to insult and demean all other U.S. military service branch veterans. See cute little Yiddish pejoratives such as "Putz" (which means 'penis head').

Tsk. I am "guilty" of an inter-service faux pas according to your veteranism (or veterinarianism or vegetarianism) as a military veteran yourself. I was unaware that standing retreat (a military ceremony at sundown) honoring 23 members of my military battalion was somehow "dishonoring them" (according to the medically-discharged USMC veteran). Mea culpa.

That USMC "veteran" (who never claimed any USMC commo experience) thinks my MOS was as a "radio mechanic" despite my giving the official U.S. Army Military Occupation Specialty brief description.

All that because the U.S. Army never used any morse code in
long-distance 24/7 operation HF communications 51 years ago.

Tsk. Well, you've had all that "experience" at Washington Army
Radio because you read a rather dated (almost pre-WW2) article
by a very olde-tymer hamme and thus you "were there" and
"knew all about" ACAN (Army Command and Administrative
Network) in which I took part. No sweaty dah.

You've neglected to "correct" me on many other things that
involved communications that I've experienced since 1956...
except some brief mentions on SURPLUS equipment of WW2
era radio. You don't know SINCGARS or the IHFR families
which are the mainstay of small-unit operations in today's
military...IHFR involves HF spectrum communications and the
present-day PRC-104 is part of that IHFR effort since 1986.

>> Show us your heroism and wonderful deeds that makes YOU so
>> superior you can denigrate those of us who DID serve in the military.
>
>Where have I "denigrated" anyone's military or other government service?

Myself and Brian Burke by implication if not directly. Further,
you've supported or condoned other PCTAs for personally insulting
the both of us. All that has been in public view here.

You've made considerable "fun" out of my having a professional
career in radio-electronics and try to denigrate professionals in
many areas besides radio. Yet you CLAIM to be a "pro" in your
day job and have never been specific in what you are supposed
to be doing "in electronics." Have you joined the IEEE yet? :-)

I've brought out the FACT in the U.S. military communications (on
HF) as of a half century ago NOT INVOLVING morse code for fixed-
point to fixed-point "traffic." You kept diverting to USN shipboard
operations trying somehow to "prove" that morse was the Big
Thing in the military...which you didn't prove since TTY was the
major traffic carrier (by far) for all military branches a half century
ago. I can't possibly disturb your Belief System (a polite
euphemism for league brainwashing) since you've had all that
direct experience (through reading about it) in all those other
radio services. No sir. :-)

No, "N2EY," I'm just not going to accept your fantasyland notions
of communications, not even in amateur radio. No matter what
the subject matter in here, you WILL attempt to "correct" me for
the simple reason of being an NCTA. You are SO touchy about
being corrected yourself, even to the implication of negativisms
about anything you do. Time is wasted trying to dicuss anything
with you about anything.

>> left the Commission (except to the supreme court of the league).
>
>Yep. Sumbuddy said it was OK.

The ARRL posted a "notice" to that effect. It might even be buried somewhere on the FCC website...haven't searched for it. Have to search for it since it isn't given some extra-special link at the FCC at the Wireless Bureau or the sub-page devoted to Amateur Radio nor at the OET page.

If the ARRL has posted the "notice" then that is "just as good" as being official. [the league can do no wrong...according to so many league Believers]

>
>I guess we need our own Constitutional Amendment.

Not to worry. All the licensured constitutionalists have taken care of that. Here's a synopsis of what they've come up with:

1. The ONLY way to show any interest in radio is to get a ham license. Any other endeavor, interest, curiosity is meaningless without that official authoritzation to operate (but only in the ham bands). Industry employment doesn't count, ever.

2. The ONLY way to show any capability of doing anything in radio is to home-build an HF transceiver (for the ham bands) and then display it on an AOL home page. All else is meaningless.

3. Newsgroup gabble about non-amateur-radio subjects is absolutely permitted, even encouraged...because it is done by authorized, licensured, official amateurs who are regulars in this newsgroup and self-designated as the saviors of the amateur radio future.

4. Anyone not a PCTA is forbidden to even mention radio policy subjects and such should always be cat-called, heckled, personally insulted for the slightest hint of negativism expressed against the god-like words of the PCTA and their beloved morse code ability.

5. No one, absolutely none, is permitted to say anything negative (however slight) against the claims, brags, or statements of any PCTA. All must shower such with accolades and respect worthy of heroes, leaders, and statesmen lest they be offended and run home from the schoolyard crying for their mamas.

6. There is NO other radio except amateur radio. The excellence of all radio (no exceptions) lies in HF bands operations as done by official, licensured amateurs working DX with CW. Implications that there are other radio services (including evil CB) is an aberration and is punishable by all manner of personal insult to anyone bringing such subjects to the newsgroup.

7. Anyone who has met the old Amateur Extra federal examination and passed is automatically elevated to expertise in:
A. Entertainment business production and ethics.
B. Architectural techniques, including engineering for same.
C. National and International politics and policies.
D. Aerospace business, industry, and technology.
E. Rail and other vehicle transportation.
F. Medical technology and application, regardless of licensure.
G. Parenting and family values, plus pediatrics.
H. Absolute insider knowledge on the decisions made by the Federal Communications Commission.
I. Intimate knowledge and understanding of all amateur radio technology and how it came to be through history.
J. The righteousness and correctness of the ARRL in all matters on amateur radio (for they are blessed as the saviors of U.S. amateur radio as sung in the hymnals at the Church of St. Hiram - the Divine).
K. Anything else not covered in items A through J.

8. The Constitution of the United States of America has NO freedom of speech allowed to any No-Code-Test Advocate.

9. The Federal Communications Commission requires all staffers and commissioners to hold valid amateur radio licenses in order to regulate U.S. amateur radio. Such INVOLVEMENT is absolutely necessary and may even be a legal requirement under the law.

10. It is impossible to know ANYTHING in any subject without any class of amateur radio license, foreign or domestic.

11. In order to discuss getting into amateur radio one MUST already be licensed and have licensure IN amateur radio.

12. All those already licensed (and with licensure) in amateur radio know EXACTLY how every other radio amateur thinks, feels, experiences, believes, behaves...in perfect understanding.

13. Anyone getting into amateur radio MUST also achieve cognizance by ALL other radio amateurs for their dedication and resolve and devotion to the ONLY radio - amateur radio.

Okay, that's just a baker's dozen items expressed or implied by those PCTA gurus of radio who reside in this royal mounted olympus newsgroup.

There's a 14th item but that involves HUMOR and amateur radio is a most SERIOUS subject. The PCTA will lose their amateur jobs if they give in to humor. The P in PCTA also stands for PROFESSIONAL. The PCTA are never ever amateurish.

A prediction I have is that Powell over at the FCC will begin to pass newer regulations on ISPs, and most importantly, the hosting companies. The internet, as a result, will become prey to the media consolidation and "standards" that are all the rage at the current FCC. Now, not to sound paranoid, but this, along with the expansion of the Patriot act, doesnt make me all confident about the future of the last true marketplace of ideas available to the american people.

I obtained my Noice license back in the early 80's. I kept renewing my ticket, but along the way I physically lost the license after a break from ham radio and a move.

So a few years ago I contacted the FCC and now have, in my possession, my Novice ticket from 1998-2002, and my current ticket from 2002 to 2012.

I am planning on upgrading to Technician class. Assuming I pass the test, will either of my Novice tickets grant me "Technician with HF privileges"? And when I eventually upgrade to General, will that also satisfy my General code requirement?

Thanks.
Erik

Yes the possession of the Novice license will mean that you will have the "Tech with HF" privileges. Those HF privileges will be the same as the Novice license. However what you gain are complete VHF/UHF and higher privileges.

When you upgrade to General, your Novice license will satisfy your General code requirement so don't lose it.

>privileges"?

Yes. You will have those privileges as long as you retain the license
documents.

>And when I eventually upgrade to General, will that also
>satisfy my General code requirement?

Yes again - even if the Novice license itself has expired.

--

I suggest that you try the General and Extra tests the same time you go for the
Technician. Besides being good practice, the VE fee entitles you to try them
each once. You might wind up with a General or even an Extra, and not have to
worry about keeping the old license documents around.

>I run OSX at work for my main computing, plus some Windoze as needed,
>and Windoze at home for ham apps.

Windows XP is lousy for me, because the menus keep switching.
They were trying to do some kind of contextual menus. For example, if you want photos, change the directory format into thumbnail photos.

It doesn't always "guess" correctly what I want it to do, and I end up having to try another directory. Rather than being helpful, it is annoying because of its inconsistancy.

>But there is one particular ham app for OSX that has me salivating.

Do you know of any "classic" OS9.x Ham applications? OS9x had the best user interface. This is very significant advantage, in my opinion, for "field" operations (such as Field Day).

I almost didn't become a ham, because I found out about feld-hell! I
mean *really*, just how unattractive a mode can you get?

But seriously folk, this whole "They just don't get it!" jeremiad, is
just that - a jeremiad.

Yapping at us about not using newfangled digital techniques without
naming what those modes might be is not a way to lend credence to the
lecturer.

Later on in this post, I'll do something like that.

> I recall some years back when a certain poster here was haranging us

> So which way do we go, Hans?

Turn left at Orion?

>> "Make sure that, on your watch, Amateur Radio never becomes
>> obsolete."
>
>
> OK, fine - how do we do that? Who defines "obsolete"?

I will.

All modes in use more than ten years ago shall be outlawed.
All modes shall be digital, as that is high-tech.
In order to avoid future obsolescence, no mode shall be allowed to be in
use more than ten years.

To encourage compliance, and to allow for manufacturers to continue to
make high quality equipment available, all equipment shall be destroyed
at the end of it's allotted life, and all new digital modes shall be
proprietary to the manufacturers.

>

> weekend could have been reached by email in a fraction of the time and
> with no use of the radio spectrum at all - so is SS "obsolete"?

Remember that the Internet is High tech and should always be used in preference to radio modes, which are old and stodgy.

Why don't hams get that through their head? We could move the CW SS to the internet. A clever programmer could write propagation conditions for each faux band, and random propagation conditions for the contest. Noise and QRM (QRpR for programmed interference?) There ya go! A Contest that uses absolutely no HF bandwidth, and is done via the web, therefore is modern and Hi-tech. Heck, the smart ham should be able to auto send and receive and auto log to boot. This would allow him or her to do something else, while the computer does the contest.

> Is it OK for me to homebrew rigs the way I do? Or must it be
> electropolitically correct, using only SMT and the latest goodies in
> the Digi-Key catalog?

Live in the now, Jim!

> This whole discussion sounds like I'm being told what I should enjoy
> and what I shouldn't.

Jeremiads often work that way.

That hams might be exhorted to try new technologies is in itself not a bad thing. To threaten them is quite another. To make *weird* arguments such as using less bandwidth can get you more spectrum is positively nonsensical, aside from being an argument against AM or WBFM!

So here we are. Considering that most of us here are RF type people, this means that digital equipment will most likely be in the form of add ons to existing equipment, unless we follow my draconian suggestion from a few paragraphs back.

And most of what I've seen leaves a lot to be desired. One I was reading about recently sounded promising, until I found out that you have to be on the same frequency as the other station when they start

transmitting, elswise you won't be able to pick up the signal. Nothing, not gibberish, or noise or anything. Channelized HF for us, folks? Maybe all comms by Sked?

Other thoughts are that many digital voice modes take up as much or more space than a properly modulated SSB signal. What's with that?

So we need to look at a successful digital mode. Probably the best one to use is PSK31. Low BW usage, works pretty well, as long as monster high power and BW grabbing other signals don't open up right next door.

PSK31 can be performed by any amateur with a rig, computer, sound card and interface.

The parts for the interface can be assembled for a few dollars, or purchased for not a whole lot of money.

Software can be free.

There are others out there to type to. Very important, yaknow.

So I made my interface, plugged it in, and was having QSO's in short order. That's a successful mode.

Probably more successful than a relatively expensive box that plug into your computer between mic and rig, and requires the guy or gal on the other end to know your frequency and when you are going to start transmitting.

We have (most of us) a digital processing box sitting on our desks right now. A lot of us already have it hooked to the rig.

Here's a potential voice mode that utilizes psk31:

Voice recognition software that you speak into a mic. the output is modulated using psk31, and after received on the other end, is text to speached by the other computer. Probably would take two sound cards, and would be slow, but that is probably as little BW as voice could take.

So there. I have offered my opinion, and a possible mode, not just a general jeremiad on how Hams need to keep up.

> There was a classic original "Twilight Zone" episode starring Burgess

This sounds like more bovine scat from Mister Baxter himself. What happened?
Did Glenn run out of Felony Affidavits?
So, porcine Glenn wants to garner "culpable" witnesses? Amnesty? From what?
"Prosecution?"
From who?

Get off it, Glenn. Your oversized ego is fastly being replaced by your
equally oversized mouth
and obviously undersized mentality.

I long ago found a very simple cure for Baxter's Blabfests. I turn the VFO
to frequencies where REAL Hams operate.

Go ahead, Glenn. Really! I strongly urge you to pursue this frivolous
lawsuit! Don't just posture about it as you do the Felony Affidavits. Do it!
You have already made such a huge fool of yourself that a little more won't
hurt.

Were you ever in the military, Glenn? If not, ask someone who was. Ask them
what a sinking ship looks like.

(Name and callsign withheld to avoid harassment from Glenn Baxter, K1MAN.)

The American Amateur Radio Association, AARA, announced today that
ARRL is being added as Defendants in the 16 October 2004 Boy Scout
interference incident. Other Defendants will also be added, according
to AARA Executive Director Glenn Baxter, K1MAN. "We are still
investigating the case and collecting many sworn statements. Any
possibly culpable hams who come forward as a witness for the Plaintiff
will receive amnesty from prosecution, Mr. Baxter said today in a
brief interview. I am a Professional Engineer, not an attorney, but I
would suggest that hams should not rely on attorney Riley
Hollingsworth, K4ZDH, since he is the PRIMARY Defendant (personally)
in this civil action. We are seeking ten million dollars in damages
and also a Court writ of mandamus to ORDER the Justice Department to
prosecute the criminal side of this Sections 333 and 501 matter. It is
quite interesting to note that October 16, 2004 is exactly three
years, to the day, of K1MAN amateur bulletins returning to the air
after my two year sabbatical teaching high school chemistry, physics,
and math," Mr. Baxter said."

For the latest information on this federal lawsuit go to www.K1MAN.com
and click on "Breaking News."

"Papers will be served by federal marshals in late December; just in time for Christmas," Mr. Baxter went on to say.

Yes, but not applicable in this case. Who the heck do you think comprises the Presidents cabinet? Its generally powerful friends and supporters he has had over the years. Cabinets have always contained these types, and the same thing applies to other political appointments the next level down. This is NOT civil service; its political appointments.

You're looking for trouble where there is none.

Ed

> license. Any other endeavor, interest, curiosity is meaningless
> without that official authoritzation to operate (but only in the ham
> bands). Industry employment doesn't count, ever.

Fiction.

Stated as such by numerous posters, including those that Lennie
refers to as "PCTA".

> 2. The ONLY way to show any capability of doing anything in radio
> is to home-build an HF transceiver (for the ham bands) and then
> display it on an AOL home page. All else is meaningless.

The only way to ahve any PRACTICAL experience is to actually DO
something. And "doing something" is not on Lennie's agenda. Neither
competent, capable or qualified.

> 3. Newsgroup gabble about non-amateur-radio subjects is absolutely
> permitted, even encouraged...because it is done by authorized,
> licensured, official amateurs who are regulars in this newsgroup
> and self-designated as the saviors of the amateur radio future.

Anyone can discuss anything in an unmoderated newsgroup.

However people who take other people to task for doing it, but
who are themselves most guilty of generating reams of "off-topic" fare
will be humiliated and harrassed as being two-faced.

> 4. Anyone not a PCTA is forbidden to even mention radio policy
> subjects and such should always be cat-called, heckled,
> personally insulted for the slightest hint of negativism expressed
> against the god-like words of the PCTA and their beloved morse
> code ability.

Nope.

Those who get "cat-called, heckled" are those who ACT like they
know about Amateur Radio policy (the subject of THIS NG.) but
obviously don't have a clue as to what it's all about.

IE: The persistent NG rantings of one Leonard H. Anderson.

> 5. No one, absolutely none, is permitted to say anything negative
> (however slight) against the claims, brags, or statements of any
> PCTA. All must shower such with accolades and respect worthy
> of heroes, leaders, and statesmen lest they be offended and run
> home from the schoolyard crying for their mamas.

As opposed to the shoring of accolades that non-licensed,
allegedly professional ex-technician/engineers are supposed to get,
Lennie?

> 6. There is NO other radio except amateur radio. The excellence of

> at the Church of St. Hiram - the Divine).
> K. Anything else not covered in items A through J.

Obviously a few of the things that Lennie seems overwhelmed by,
but tries to redirect onto others.

It must be miserable to be so old and BE so miserable...

> 8. The Constitution of the United States of America has NO freedom
> of speech allowed to any No-Code-Test Advocate.

Wondering where that is...??? It's not in any Constitutional
document I have ever read.

Guess Lennie's just lying AGAIN! When will it ever stop???

> 9. The Federal Communications Commission requires all staffers and
> commissioners to hold valid amateur radio licenses in order to
> regulate U.S. amateur radio. Such INVOLVEMENT is absolutely
> necessary and may even be a legal requirement under the law.

It's not a bad idea, but it's NOT the law.

> 10. It is impossible to know ANYTHING in any subject without any
> class of amateur radio license, foreign or domestic.

Huh?

> 11. In order to discuss getting into amateur radio one MUST already
> be licensed and have licensure IN amateur radio.

No...to have an INFORMED opinion one must some practical
experience...Whether in Amateur Radio, engineering, Nursing, or
bowling.

> 12. All those already licensed (and with licensure) in amateur radio
> know EXACTLY how every other radio amateur thinks, feels,
> experiences, believes, behaves...in perfect understanding.

Guess I missed out on that...

> 13. Anyone getting into amateur radio MUST also achieve
> cognizance by ALL other radio amateurs for their dedication
> and resolve and devotion to the ONLY radio - amateur radio.

Again, another Lennie rant...

> Okay, that's just a baker's dozen items expressed or implied by
> those PCTA gurus of radio who reside in this royal mounted olympus
> newsgroup.
>
> There's a 14th item but that involves HUMOR and amateur radio is
> a most SERIOUS subject. The PCTA will lose their amateur jobs
> if they give in to humor. The P in PCTA also stands for
> PROFESSIONAL. The PCTA are never ever amateurish.

In order for the concept of humor to be effective, there must be
some common frame of reference.

You have no common frame of reference with anyone in this forum
as it pertains TO the forum, Lennie...You hate Amateur Radio, you
slander the reputations of anyone/everyone remotely attached to it,
and basically are just a cruel, cold creep.

And what laughter you do hear is directed AT you, not WITH you.

Sucks to be you, Old Man...You cudda been a contender...

THat may be so. But looking at what was said, then the loss is
inevitable. When we get contradictory statements that we have to
conserve bandwidth to get bandwidth, it ain't good, or likely true.

HF isn't prime real estate anyhow.

> In a misdirdected response ARRL has erected an expensive political
> soapbox on the street corner with huge banners saying "Save Our
> Playground". The FCC is ignoring that soapbox and putting up more
> billboards with unflattering descriptions like "routine communications
> and hobby activities".

You are seriously saying that we would sway politicians, and regulators
that simply try to figure out what the regulates tell them to do - with
science rather than more politics? Better go read what the scientists
have to say about that sort of thing.

Today, if the science does not fit the agenda, it is discarded.

> It is the contention of a growing number of active and concerned hams
> that ARRL needs to quit spending our money on political posturing, and

Okay. Tell us what they must do. I hear a lot of posturing, but it is all of the political sort.

Give me some real projects, and where the ARS should go, and what they should do, in hard form, not hand wringing.

Not hardly. If the ARS were to be banished to a few bands, and allowed only digital signals of very small BW, I had come up with a method of doing voice comms using hardly any BW at all. Hardly cutting edge stuff, but cutting edge stuff isn't our province (on the ham bands) anymore.

That's more than what I hear from anyone else.

One shouldn't ever change their mind. As a newly minted Extra lite, I
had some thoughts about the matter.

But these days, one must make up their mind about something
immediately, and any change is a sign of weakness, moral ineptitude, and
a lot of other bad things.

Stay the course.

Sorry, but in my time since then, I've learned a lot. I learned that I
was wrong then. That may not fit in with your politics, but so be it.

I don't think your idea that we should abandon political action for
scientific reporting only (you do realize that that is just more
politics don't you?) is a great way to lose a lot of things.

We deal with regulators, and they are a branching of the political
process. It's there, and it's a fact of life. Notice how we give
feedback to the FCC on various subjects? That is political input. We are

a technical service trying to convince non-technical people of our opinions.

Put in reverse order, do you think that if we had prepared and
presented a technical report on the subject, that BPL would have been
discarded?

I've set my XP systems to all classic windows mode, and done the same
with my wife's laptop. She was having trouble with all that "help" that
XP has. I simply went classic display, and had the menus show all the
files, explained what is openable and what is not, and she's picked it
all up well.

I use Win2k on my laptop. The one OS that MS got mostly right.

>
>>But there is one particular ham app for OSX that has me salivating.

No, and I sure wish there was. OS9 is preferable to OSX in my book
also. Some of the simple functions, such as choosing a printer, or
simply connecting to another computer, are a nuisance in OSX. And I'll
never forgive Apple for taking away my function keys! On my old
computers I simply push a function key for whatever I want to do...

Of course I don't think that, and neither did I say that.

What I >>DID<< say is that I believe that ARRL is wasting our money trying to be a political force, and (MORE IMPORTANTLY) that I think that the same money would be better spent on efforts which renewed the Amateur Radio reputation for technical innovation.

You keep trying to twist it into "what has Hans done lately?".

You know this for a fact? How?

> Tsk. Well, you've had all that "experience" at Washington Army
> Radio because you read a rather dated (almost pre-WW2) article
> by a very olde-tymer hamme and thus you "were there" and
> "knew all about" ACAN (Army Command and Administrative
> Network) in which I took part. No sweaty dah.

Was the article factual or not?

It seems to me that you're very opposed to Morse Code getting *any* credit for
anything useful.

> You've neglected to "correct" me on many other things that
> involved communications that I've experienced since 1956...

You make too many mistakes for me to keep up with, Len ;-) ;-)

> except some brief mentions on SURPLUS equipment of WW2
> era radio. You don't know SINCGARS or the IHFR families
> which are the mainstay of small-unit operations in today's
> military...IHFR involves HF spectrum communications and the
> present-day PRC-104 is part of that IHFR effort since 1986.

So what? Why is SINCGARS of any relevance to amateur radio?

Can hams get the sets in surplus? Can hams use them legally? How much does a
new one cost?

>>> Show us your heroism and wonderful deeds that makes YOU so
>>> superior you can denigrate those of us who DID serve in the military.
>>

>>Where have I "denigrated" anyone's military or other government service?
>
> Myself and Brian Burke by implication if not directly.

You take *any* comment that is not butt-kissing suck-up praise as an insult.

Show us some examples of these so-called "denigrations". My posts are all in google.

> Further,
> you've supported or condoned other PCTAs for personally insulting
> the both of us. All that has been in public view here.

"Supported or condoned"?

What would you suggest that I do?

Seems to me that you expect me to somehow stop others from saying anything you perceive as an insult, but at the same time allow you to insult them freely.

Here's a clue, Len: That's not how it works. Each of us is responsible for our own postings.

> You've made considerable "fun" out of my having a professional
> career in radio-electronics and try to denigrate professionals in
> many areas besides radio.

Where? Show us, Len.

> Yet you CLAIM to be a "pro" in your
> day job and have never been specific in what you are supposed
> to be doing "in electronics."

Where did I claim any of that? Show us, Len.
>
> I've brought out the FACT in the U.S. military communications (on
> HF) as of a half century ago NOT INVOLVING morse code for fixed-
> point to fixed-point "traffic."

How do any of us know it's a FACT except because you say-so?

How do we know that the entire US military (not just the Army) did the same thing?

Most of all: *WHY* is that supposed FACT of any importance to amateur radio *today*?

C'mon - explain it to us. Show us why it has any importance at all.

> You kept diverting to USN shipboard
> operations trying somehow to "prove" that morse was the Big
> Thing in the military

Not true, Len.

I was simply showing that Morse Code use in the US military continued for decades beyond 1952. You may denigrate the USN and USCG as not being "big-time", but they are.

>...which you didn't prove since TTY was the
> major traffic carrier (by far) for all military branches a half century
> ago.

How do we *know* that except for your say-so, Len?

Most of all: *WHY* is that supposed FACT of any importance to amateur radio *today*?

They support at least the concept of BPL. That's abundantly clear. There was a time when FCC would have laughed the whole BPL concept out the door - not because it interfered with hams but because it was just not a good idea technically. Ask K2ASP.

I disagree, Hans. Without some political action, ham radio will simply be legislated out of existence - eventually.

We haven't gotten everyhting we wanted in the BPL fight. Neither did the BPL folks get everything *they* wanted.

>and (MORE IMPORTANTLY) that I think that
>the same money would be better spent on efforts which renewed the
>Amateur Radio reputation for technical innovation.

Why can't there be money to do both?

More important:

What, exactly, should we hams be doing to renew that reputation?

If I knew "what exactly" it would already have been done.

And I'm not talking about individual hams here, but how the ARRL focuses its (our) resources.

If ARRL redirected half of the millions (yes, millions) it spends in Washington towards fostering a renewal of the technical reputation which we have lost, we'd have both credibility at the regulatory level, and respect in industry.

ARRL (as the "national organization of amateur radio" which they bill themselves) is the only one with the resources to bring "tinkering and inventing" back into the forefront.

Encouraging innovation isn't tough --- in my engineering group I ask each engineer to spend 10% of their time (4 hours per week) as "PBI" time ("Partially Baked Idea"). This is time to pursue personally selected pet projects unrelated to their primary tasking, even unrelated to our groups tasking. Once a quarter we hold a one day "off site in blue jeans" meeting where individuals can grab the spotlight and "show and tell" their PBI to the rest of the group. The effect on creativity is marvelous, and also a great tool for identifying "up and comers" whose creativity might be otherwise masked by the day-to-day drudge of assigned tasking.

Can you imagine what might happen if ARRL spent perhaps $500,000/annum on "PBI" conferences, and made some "folk heroes" out of some tinkerers and expermenters. Hey, they do it for DXers and contesters!

Twist? A large part of your post was quoting:

"I would urge you to continue shifting towards more
spectrally efficient communications techniques - especially
digital techniques. Such a shift has a number of benefits:

"- First of all, it demonstrates to POLICYMAKERS and REGULATORS
that you are good stewards of the public's airwaves even without
direct economic incentives.

"- Second, by using what you have efficiently, it strengthens
your case when you need to ask for additional spectrum.

"- Third, by allowing more users to access the available
allocations simultaneously, it improves the amateur experience and
ultimately increases the attractiveness of the service to new and
old users alike."

I'll assume that you believe what you posted? (correct me if I'm wrong)

I would hope you would set a good example by taking the lead.

Of course an alternative might be like a person that I know that had
the cojones to declare that their role in life was to point out others
shortcomings, not to do anything about them.

Or are we only supposed to talk about the ARRL political funding and
not the other ports of your post? You quoted the "digital techniques"

again yourself while trying to discredit me for changing my position.

Between Lenover21 and yourself, I'm beginning to think my posts are a real irritant! 8^) You two need to get together and write up some posting rules fer me!! HA!

Yes, I believe that is what those regulators said.

>
> I would hope you would set a good example by taking the lead.
>

I did take the lead, by trying to point out what seems to be the
prevailing regulatory attitude towards us. I further took the lead by
pointing out that I feel the ARRL ought to shift some of the 'political'
spending into programs which sponsor and nuture an attitude of tinkering
and experimenting among amateurs.

Brian, you're right!

The issue is not that we are relevant or up to date. We're not. The issue is that we are the public. Hobby use of the radio spectrum is justifiable on it's own terms, and that is a matter of politics, not technology. CB and FRS are parts of the same thing, whether we like to admit it or not, and amateur radio is for the few who know a kilocycle from a bicycle!

The parks argument is a good one. The spectum is a natural resource like the forest and the shoreline, and like those it shouldn't be for business use only.

Way back in college in the 1970's, back in the days of SB102's
and DEC PDP8's, the computer guys called themselves the
digital hackers. One time we in the ham club joined them
in some project, and they called us hams "analog hackers".
Seems that what we did with circuits they did similar in
computer code. "Hacker" in the old sense of someone who
fooled around with computers to get better performance, not
breaking computer security.

Hello, gang

Now we have had questions as to the future of amateur radio and BPL - and have seen that the FCC now considers amateur radio simply a hobby and not worthy of full protection, I'm seeing some upcoming problems.

How will we calculate resonant frequency? Since Wisconsin is now going to teach creationism, I assume that Tennessee will revive their old law which states that PI is equal to 3 (integer). With Bush firmly in command, I suspect that PI will be made (by law) equal to three. Also, I suspect that the metric system will be scrapped. We will deal in feet, with the foot officially set to the length of Bush's foot.

Anyone have any new formulas? Or won't that matter too much? What will the radian be defined as?

Inquiring minds and such .... :))

As a paralegal, I can tell you this tort is flawed in that it does not
name the person/persons of cause. In this case it would be the Scout
station and specific operator on frequency that refused to move to
make way for K1MAN, who claims to hold legal ownership of said
frequency. But here a problem exists. This claim of ownership is in
direct opposition to the factuality of rule stated by the FCC that all
Amateur Service frequencies are shared and no Amateur Service license
holder has greater right of access to any frequency than any other.
Based on this and the fact that K1MAN has not named the specific
operator of cause in this action, the tort will be dismissed. This in
turn will permit those named by K1MAN to seek compensation through the
court system for malicious prosecution.

They are representative as they take a random selection of questions in the correct ratio from the question pool. However, since the question pool is several hundred questions, there is an infinite number of combinations. I.e. you won't see the same combination of questions on your test as you do on the sample tests.

If you know and understand the material, such as how to calculate a dipole length rather than just memorizing the length for the specific question, you will have no problem.

Sez so in the bible, so it must be!

2 Chronicles|4:2 Also he made a molten sea of ten cubits from brim to
brim, round in compass, and five cubits the height thereof; and a line
of thirty cubits did compass it round about.

But it wasn't Tennessee, it was Indiana. And it wasn't 3, it was 3.2, or
3.3, or 4. The fellow proposing the law (T.I. Record of Posen County, in
1897) was confused by the idea of pi being a non rational number.
REally really confused!

But aside from being in error on that matter, you have a good point. We
are entering an age of anti-science.

Hello, Mike

Thanks for straightening me out on that one.

Must be I was thinking of the Scope's (not sure of the name) monkey trial.

Well, I messed up on my numbers a bit (not to mention the state in question), but you did get my drift.

I like your last line. You are correct, we are going back to the 1950s (or 1850s, take your pick). I guess we can just hope that China can make our junk for us and India can design it. Then we won't have to worry what PI is anyway ;)

Hello, Hans

With Bush firmly in control with reactionary folks, I see that Wisconsin is now going to teach creationism.

I see no hope for science. We are going backwards 50 years or more. As long as India can design and China produce the junk we consume, no one will be the wiser.

That's similar to what I did a few years ago. When restructuring
happened back in 2000, I had a Tech plus (with the old style tech,
general written and novice code). I had the option of doing
a paperwork upgrade to a general, but I took and passed the
extra writtens. That locked in credit for 5WPM I had with
the old tech plus. Which I passed at an FCC field office,
I had to copy and send code. With a straight key they had
mounted to a desk. That's back in the olden days of
50 cent gas...

There is a very simple conclusion to all of this Baxter crap. Or
several...take your pick.

1. Baxter is a Blowgut.
2. Baxter is full of himself.
3. Baxter is selfish.
4. Baxter is a phony.
5. Baxter needs female companionship.
6. Baxter needs male companionship.
7. Baxter has no Contro Op.
8. Last but not least, Baxter is full of shit from top to bottom.

The main problem is the main numbers of genial software is developed for running under Windows.
I use LINUX for the main work, Internet, E-Mail, office, etc. and have beside a computer with WindowsNT which not connected to the Internet (security reasons) and only for use in LAN for some software which are not available for LINUX.
I understand you and would like to see more HAM software for LINUX.

>No anger. I was working on my ebonics.

I had to give this a lot of thought, Brain, and, well...here it is.

You represent the absolute worst there can be in a man, not only in Amateur Radio, but as a Veteran, Scout Leader, etc.

People forgive other people for mistakes, unintentional transgressions, or just blatant ignorance in the lack of knowledge.

But it takes a certain kind of low-life to lie in public, and then try to cover lies with more lies until the lies are so thick that your character is bankrupt.

You find it so easy to lie. You do it over and over, regardless of how obviously wrong you are. Your attempts to dodge responsibility for your misconduct are so transparent as to make one wonder how you look yourself in the mirror to shave.

You humiliate your family name by doing it, but that does not seem to deter you. You could care less about your family, it seems. You certainly present the very worst as a role model to the scouts you alledge to lead.

You publically "admire" yet another person known as a liar. You think it's a joke, but the joke, at the end of the day, is on you.

You have no credibilty. Your mistruths and refusal to adhere to even your own rhetoric have earned you several well earned back-channel awards.

Brian P. Burke is an unrepentant liar and coward. Archived. Proven.

And now he's in the kill file.

See ya at Dayton, Brain.

Steve, K4YZ

Hi, Bob

Well 22/7 was a simple, fairly close approximation. Obviously, not many folks memorize a lot of decimal places (which still wouldn't be exact, of course).

I had an electronics teacher (he was junior man on the totem pole; he was a drafting teacher actually) who insisted that there was a complex formula to figure out resonant frequency, but this equation was close enough: frequency equals capacitance times inductance.

LOL - true story and I was threatened when I disagreed. That was an early lesson (at age 14) as to what the real world would be like. Now that we have Bush, I just hope the rest of the world can do our designing for us ;)

>
>I don't think that would make any difference to how you behaved towards them.

Awwwww...poor babies...they can't Get Their Way by being nasty,
rude, and insulting to other people...BUT others simply CANNOT
mention their discomfort at that?

Of course. "Superior" extras must have earned some kind of "right"
through all that tested morsemanship so that they can behave like
ashholes to anyone else. Understood.

>> Or those who "served the country" by being a minor civilian sort for a
>> defense contractor on a USN aircraft carrier. [I tend to dismiss
>> the claims of "taking photographs for naval intelligence" as having
>> any importance]

>
>Yet all these people should show respect for *your* service even though you
>show absolutely none for *theirs*.

They've "shown respect" for me?

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHEEHEEHEEHEEHEEHAWHAW.

Hans Brakob is about the only other morseman in here who has
shown any respect for my service time.

>So you think it's OK to treat K8MN the way you did, and continue to do.

"Dave" got treated (mildly) in just the same way he "respected"
anyone else.

Neither you nor "Dave" get Special Dispensation for acting arrogant
and "superior" due to morsemanship.

>It would be interesting to see when that pejorative was first used, and what
>you did to encourage it.

"What I did to 'encourage' it?!?!?!

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH.

I suppose you think the Kennedy brothers "encouraged" their
assassins to kill them?

Tsk. Jimmie, you've got to LEARN how to handle computer-modem
communications. This is a very OPEN forum, unmoderated, and
(not matter how much you imagine it) you are NOT someone who is
a lawgiver of truth nor immune from criticism.

>It's more like your constant badgering and insulting of anyone who disagrees
>with you.

Tsk. I should roll over and play dead when some #$%^!!! calls me a
"penis head" in a dialect-language he doesn't know?

Of course. Morsemen are the superior breed, higher than all others.
After all, they passed a CODE TEST! That proves their "superiority."

>So - "can't you take a little tweak"?

I've taken little "tweaks" all my life.

Usually those "little tweaks" are from little twerps.

I've learned long ago to REPLY IN KIND to such bullshit "little tweaks."

>> All that because the U.S. Army never used any morse code in
>> long-distance 24/7 operation HF communications 51 years ago.
>
>You know this for a fact? How?

I was IN it. You were not.

I saw the directives. You did not.

I have some of that documentation. You do not.

I was IN the military doing communications. You were NOT.

>> Tsk. Well, you've had all that "experience" at Washington Army
>> Radio because you read a rather dated (almost pre-WW2) article
>> by a very olde-tymer hamme and thus you "were there" and
>> "knew all about" ACAN (Army Command and Administrative
>> Network) in which I took part. No sweaty dah.
>
>Was the article factual or not?

For pre-WW2 operations at WAR (Washington Army Radio) it MAY
have been. It was NOT FACT on WAR operations during the Korean
War active phase (1950-1953) nor after.

Prove I am telling an untruth.

>It seems to me that you're very opposed to Morse Code getting *any* credit for
>*anything* useful.

Tsk. You can't Google (or DejaVu) very well.

The Morse-Vail Telegraph system was EXCELLENT in terms of near-
instant communications in the 1800s. That first example of a working
COMMERCIAL telegraphic system of 1844 was eventually copied all
over the world.

The original morse code was changed from an all-number code to
include the English alphabet and some punctuation marks. That lead
to variations in the "morse code" to include characters in nearly all
alphabetic-form written languages.

Let's face it. "Morse code" is almost as old as wired telegraphy
itself - 160 years old as of this year.

"Morse code" was EXCELLENT as a means to communicate via
early primitive radio. In fact, it was about the ONLY way to use radio
for any communications (by on-off keying). It was as simple as the
the first "radios" (spark transmitters and simple detectors).

Tsk. Problem is, the year 2004 is far removed from 160 years ago.

Only some very "retro" individuals want to venerate the distant past
by trying to retain the old, outdated "standards" in federal testing.
Especially by those whose life experience began LONG after those
"standards" evolved for their time and place.

>You make too many mistakes for me to keep up with, Len ;-) ;-)

Tsk. You are "poisoning the well" again with grade-school
rhetoric.

I do not confuse personal opinion as "fact" as you do (often).

Neither do I stand as some magistrate or judge demanding (as
you do) some "accountability" for not following some urban myths
about the Greatness and Nobility of morsemanship.

I owe you NOTHING.

>So what? Why is SINCGARS of any relevance to amateur radio?

Irrelevant statement of yours.

Frequency-hopping digital modulation radio systems are so far
AHEAD of current amateur radio HF and VHF practice that it
will not adapt to the ways olde-tyme hammes beep their way into
"superior" communications on HF.

I mentioned SINCGARS because it is an example of what CAN
be done with a radio system that can have multiple users in a
small part of the EM spectrum (30 to 88 MHz) without any
interference. Roughly a quarter million SINCGARS sets are
operational NOW. [produced by the former General Dynamics
Land Division and the originator, ITT Fort Wayne, IN] They've
been in production since 1989.

I mentioned the "IHFR" (Improved High Frequency Radio) sets in
the U.S. military. A program begun in the 1980s that resulted in,
among several models, the AN/PRC-104, designed and built by
Hughes Aircraft Company Ground Division. Manpack, 20 W RF
PEP, battery powered or powerable from a vehicle supply, full HF
spectrum tuning, includes an automatic antenna tuner in the man-
pack version (a heavier duty automatic tuner with the higher power
400 W PEP vehicular and fixed units). Roughly a hundred
thousand IHFR sets produced. Still operational in land forces.

>Can hams get the sets in surplus?

They aren't surplus yet, still operational and being used in places
like Afghanistan and Iraq.

>Can hams use them legally?

Not unless "Steve" approves their use outside of the USA.

AS-IS, without the frequency hopping and COMSEC modes, they
meet all the technical requirements of Part 97, Title 47 C.F.R.

The IHFR would be ideal for MARS operations OUTSIDE of the
ham bands. But, that is pending approval of his majesty "Steve"
who is insistent on "MARS >>IS<< amateur radio" regardless of
the DoD authority.

>How much does a new one cost?

More than $100.

About the price of a KWM-2 set. :-)

>You take *any* comment that is not butt-kissing suck-up praise as an insult.

Oooooo!!!!!! Finally got some testosterone supplements? :-)

Here's some examples of what others have said that you define
as "butt-kissing suck-up praise":

Messages signed with "Putz," meaning the pejorative "penis head"
in Yiddish.

Allegations of constant plagiarism in print (from "copying others'
material" in Ham Radio magazine) and "never having an original
thought" in same.

Being called a "bench technician" all throughout my electronics
engineering career, "unworthy of being a 'real' engineer." [from
those warm, wonderful morsemen "Steve" and "Brian the Kelly"]

Being nothing but a "meter reader" at a Signal Corps HF radio
station at a HQ Command. [courtesy of "I dined at the Captain's
table" Kelly]

>Show us some examples of these so-called "denigrations".

Well, there you have SOME of them. :-)

Anyone not suffering the onslaught of first Alzheimers symptoms
can recall them. No "Googling" necessary.

>My posts are all in google.

So are mine. So are "Dave's." So are "Brian the Kelly's" and
everyone else (as far as I know).

This venue is NOT "Google." It is NOT about the PAST.

Constant bringing up of old arguments will NOT win you anything.

>> Further,
>> you've supported or condoned other PCTAs for personally insulting
>> the both of us. All that has been in public view here.
>
>"Supported or condoned"?
>
>What would you suggest that I do?

I couldn't possibly "suggest" anything. "Dave" says "I'm not involved."

Hi hi.

You could, possibly, conceivably, UPGRADE from a wet hankie
slapped across a wrist to something harder. A first step would be
to use a 1 x 1 balsa wood bat used on fingers.

>Here's a clue, Len: That's not how it works. Each of us is responsible for our
>own postings.

"That's not how it works?"

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH

I've been doing computer-modem communications for two decades.
I've seen "how it works." [actually longer considering some use of
the old ARPANET but that was brief] I've been co-sysop on two
BBSs. I've seen (about as first-hand as anything) how lots of
different - self-righteous - folks behave...and misbehave).

So...you say "you are not responsible for anyone else."

Okay, so why are you trying to be magistrate, judge, jury, and
executioner of me? :-)

Answer: You are as hypocritical as any thin-skinned computer-
modem communicator. Poor baby.

>> I've brought out the FACT in the U.S. military communications (on
>> HF) as of a half century ago NOT INVOLVING morse code for fixed-
>> point to fixed-point "traffic."
>
>How do any of us know it's a FACT except because you say-so?

You can access the Army and Air Force websites (Signal Center
and USAF Communications Command) for historical information.
That is quite considerable. The USAF tied it up neatly in a free
downloadable "book" titled "From Flares to Satellites." I've posted
that at least twice before.

A large technical library would have past issues of "Signal" published
by AFCEA, a military-industry professional association. AFCEA
doesn't archive old, old issues of a time when Morse was King on
their website...it has to be in print (hopefully the paper is acid-free
and can withstand such a great passage in time). The "Army
Communicator" wasn't in publcations by the Signal Corps when
Morse was King but the various Signal units have published various
things on older communications nets such as ACAN. I have some
of those in copy form from a retired civilian engineer who worked
for both the Army and Air Force (as a civilian then).

The familiarly-known "Collins Sideband Book" formally titled
"Single Sideband Principles and Circuits," by Pappenfus, Bruene,
and Schoenike, McGraw-Hill, 1964, opens with a description of
of early commercial HF (and other bands) communications nets
that started when Morse was supposedly "king" in radio. [all
three authors were with Collins Radio and Warren Bruene's
magnitude-phase detector is still used in automatic antenna
tuners today]

By a real, professional historian, Hugh J. G. Aitkin (Professor at
Amherst College as of 1985) "The Continuous Wave, Technology

and American Radio, 1900-1932" (Princeton University Press,
1985) one can get a well-rounded objective view of early radio
when morse really was the (only) king. An earlier work "Syntony
and Spark: The Origins of Radio," goes more into the period
prior to 1900 (also by Princeton University Press, softcover).

Oh, yes, I was IN HF communications a half century ago.
You were not.

I was assigned to an area Hq Command for three years and
saw as much as my clearance allowed (considerable). You
were NOT.

I served IN the military of the United States. You did NOT.

>How do we know that the entire US military (not just the Army) did the same
>thing?

Tsk. See above references. The USAF operated side-by-side with
the USA and both carried some HF circuits of the USN a half
century ago. I know that since I was IN that sort of work.

Today, HF radio is simply a back-up system for satellite relay,
direct LOS relay, troposcatter, or wired-radio DSN
communications ("the government's own Internet"). Anyone can
reference that via the Internet. Now.

>Most of all: *WHY* is that supposed FACT of any importance to amateur radio
>*today*?

It's not a "supposed FACT," Jimmie. It *IS* fact.

The knowledge of immediate neighbors to amateur radio bands in
the EM spectrum should be existant for the purposes of regulation
of all radio. The FCC recognizes this. The NTIA recognizes this.
The ITU recognizes this. James P. Miccolis doesn't recognize it.

>C'mon - explain it to us. Show us why it has any importance at all.

Tsk. :-)

Now just who is taking on the mantle of "moderator" in here? :-)

What I've said makes a h**l of a lot more sense than your
gabbling - in here - about the space business, presidential
politics, choo-choo trains, the entertainment industry, and food
and drinking establishments in a small part of Pennsylvania.

>I was simply showing that Morse Code use in the US military continued for
>decades beyond 1952.

YOU have NOT PROVED that. :-)

Were you EVER *IN* any military branch of any country? [you were
NOT]

Did you EVER work *IN* communications other than amateur?

>You may denigrate the USN and USCG as not being "big-time", but they are.

P**h off, Jimmie. I've never denigrated the USN or the USCG.

I've "denigrated" certain former employees of the U.S. Department
of State as implying that States' radio was "big time." [it isn't really
and has been criticized for a long time for its communications
means, especially secure communications]

>>...which you didn't prove since TTY was the
>> major traffic carrier (by far) for all military branches a half century
>> ago.
>
>How do we *know* that except for your say-so, Len?

Neither I nor real, working, active college professors could ever
convince you otherwise, Jimmie. :-)

I was THERE. You were NOT.

ARRL propagandists have washed you well. Enjoy. :-)

A few years ago, the Academy of Model Aeronautics lobbied for,
and received, bandspace just under 75 MHz for model radio control.
The FCC even made a new radio service within Part 95 for it.

Flying, driving, sailing models is purely a hobby and no such hobby
organization has ever claimed any "great need for the country" in
any way, certainly not in terms of being some kind of "aid in any
emergency." The Model Hobby Association members continue to
prosper with standardized and legal radio control equipment.

>CB and
>FRS are parts of the same thing, whether we like to admit it or not, and
>amateur radio is for the few who know a kilocycle from a bicycle!

Tsk. :-) Only old-timers ever used "kilocycle." :-)

Some radio amateurs are "far superior" to evil CB or sissy FRS. They
will argue its NOT the "same thing." :-)

>The parks argument is a good one. The spectum is a natural resource like
>the forest and the shoreline, and like those it shouldn't be for business
>use only.

Thank you for saying that, Alun. Sincere thanks.

About six years ago (or so) in here I tried to point out that there is a
good analogue between the hobby of amateur radio and the national

park service. The U.S. Park Service has a million acres (give or take) which is reserved for ALL the citizenry to enjoy for their recreation.

U.S. amateur radio is decades past the point of acknowledging that the hobby IS a hobby. The biggest national membership organization is stil clinging to old, old standards dating from before WW2. It cannot effectively lobby for its "constituency" using old, outdated reasons. The league is guilty of starting to believe its own propaganda and that is NOT a good thing.

>posting rules fer me!! HA!

You wouldn't accept such rules, Mike. You are so sensitive to
comments that slight negativism against your thoughts are
"getting your chops busted."

NOBODY is trying to censor you, Mike. Understand that some will
just not agree to your opinions. They aren't required to agree. If you
are overly sensitive to others' opinions on subjects, another venue
would be suggested.

Hans Brakob is perfectly able to comment independently of what
I think about some subjects. [he often does...:-)]

In the case of the ARRL's actions on the political side of BPL,
I will agree with Hans' statement...whether or not your "chops"
are affected in any way.

Then you need to swear out a statement affirming such and have it
notarized. Paste it on your forehead and slap it on your trailer.

> And they aren't "names" if they are true.

Sure they are. What kind of moron would think otherwise?

> You are a liar. YOU have proven that.

Nope. I speak the truth. You lie, and you are a pathological name
caller, usually focussing on the male genitalia. See below.

> You are a coward. YOU have proven that.

I am no coward. In your eastern Tennesee redneck "I'm gonna knock yer
dick in the dirt" sort of way, I think that you are working up the
courage to challenge me to a duel. Is that your intent?

> Putz is purely an opinion on my part, but one that seems to be well borne

That's really too bad. Either "seven hostile actions" in addition to
some sort of physical injury caused no mental trauma, or some event
after your service connected disability caused you to go nuts; but in
either case you really should avail yourself to "MENTAL" therapy, as
you put it.

> >You now hold a physically demanding and mentally challenging job all

A tale of two contests!

Started out like gang busters. Scouting the bands before the bell I came
across VY1JA handing out "placeholder" reports on 10M, so lurked there
and
put NT in the log as the 1st QSO. How much better can it be than that?

Then followed several good hours on 20 & 40, retreating down to 80M
about
midnight. At break time I had a nice fat log, including 79-mults
(missing
VE4).

Hit the bands again at 1400Z, and found Derrick VE4VV on 20 to open the
morning with my sweep in the bag, and started the day with some nice
(for
Sunday morning) runs on 20 & 15.

"HEY", sez I, "this may be my year!"

Alas it was not to be.

At around 1600Z things just collapsed, with only 15 showing much life.
Conditions fluctuated from bad to poor to fair to horrible the rest of
the
morning and all afternoon for me. At BIC=18-hours I decided I'd had more
fun than I could stand, so I sent in my log.

Only rrap'er I heard was N2EY early in the fray.

CU in two weeks!

Blocking is not censoring. We have the right to say whatever we want within reasonable limits. Blocking is not censorship. Blocking is just a way for you to not have to put up with the posts I make that bother you as per your comments. I will still exercise my constitutional right to read your posts. Yours do not bother me, even if what I post bothers you. You wrote it, not me.

> Hans Brakob is perfectly able to comment independently of what

The difference is that non-profits cannot endorse candidates. Lobbying or
endorsing CONCEPTS, i.e. legislation, is permitted within the limits of
Internal Revenue Code Section 501(h).

1726. New FCC Chairman - The devil or the deep blue sea as options

Newsgroup: rec.radio.amateur.policy
Date: 2004-11-08 03:19:35 UTC
From: King Zulu <KingZulu123@aol.com>
Message-ID: <bBBjd.6850$V41.1036@attbi_s52>
Source record: 99574

Devil or the Deep Blue Sea? The future for ham radio and radio technology looks bleak with two non-technical attorneys being suggested as possibles to replace the clueless non-technical attorney already in the top FCC position.

THE WALL STREET JOURNAL
NOVEMBER 5, 2004 (Page A4)
"BIG CHANGES EXPECTED IN CABINET Lineup"

. . . .

"Revolving Door, Key domestic-policy officials in the first Bush term, and speculation about those posts in the second one."

. . . .

Michael Powell
Federal Communications Commission

Expected to leave in the spring, after completing issues like local phone competition rules. FCC faces possible rewrite of 1996 telecom act and questions about continuing Powell's deregulation push.

Possible successors:

Rebecca Klein, former chairwoman of the Texas Public Utility Commission

Michael Gallagher, top telecom official at Commerce

. . . . "

So this is what might replace Michael Powell:

Rebecca Klein, commissioner of the Texas Public Utilities Commission
Rebecca Klein was appointed on June 27, 2001 by Governor Rick Perry as a Commissioner of the Texas Public Utility Commission. On May 17, 2002 she was appointed Chairman of the Texas Public Utility Commission by Governor Perry. Prior to her appointment as Commissioner, she was a consultant with KPMG Consulting, heading the development of the company's Office of Government and Industry Relations headquartered in the Washington, DC area.

Rebecca Klein graduated from Stanford University with a BA in Human Biology. She received her Masters in National Security Studies at Georgetown University, and earned her JD at St. Mary's University in San Antonio, Texas.

OR

Michael D. Gallagher, nominated by President George W. Bush on October 14, 2003 to be Assistant Secretary of Commerce for Communications and

Information and Administrator of the National Telecommunications and Information Administration.

Michael Gallagher was vice president for state public policy at Verizon Wireless in Bellevue, Washington. From 1998 to 2000, he was managing director for government relations at AirTouch Communications, Inc., also in Bellevue, Washington.

Michael Gallagher received his B.A. from the University of California at Berkeley and his J.D. from the University of California in Los Angeles. He is a member of the Washington State Bar.

>> assertions that were made on the very same day AFTER facts to the contrary
were
>> made that MADE those assertions so assinine, Brain.
>
>You assume that I must read the posts in your order. I don't.
>
>You're wrong. What's new?

Hmmm...I tried to read some structure into "Steve's" sentence and got
lost. One thing he cannot possibly claim is to be correct in English.
That may be why he likes those cute little Yiddish pejoratives? :-)

>> Not a hint of apology from you on those.
>
>Correct.

Tsk. All those demands to "apologize." One would think
he is operating to the PCTA extra Double Standard...

>> Coward AND a liar.
>>
>> See you at Dayton, putz.
>
>If you have a particular agenda, perhaps we could speed it up.
>
>What's on your mind?

Very little except FIGHTING is on his mind. Barbaric conduct
to "settle things" by force has morphed into being his "amateur
code." :-)

"Steve" and da "boyz" are gonna "settle" things by FIGHTs.

Nice example of what goes in a radio hobby...

Ho hum and a hi hi.

I would suggest a tatoo...but that might be considered as
"defacing government property..." :-)

>> And they aren't "names" if they are true.
>
>Sure they are. What kind of moron would think otherwise?

His kind of moron? :-)

>> You are a liar. YOU have proven that.
>
>Nope. I speak the truth. You lie, and you are a pathological name
>caller, usually focussing on the male genitalia. See below.

Now now, "Steve" has been federally tested to a high rate of
morsemanship. In achieving an amateur license his is now
a "qualified name-caller" and may bypass normal sociological
considerations.

Bypass? Tsk. Someone got the bypass wrong when they
had him in stitches.

>> You are a coward. YOU have proven that.
>

>I am no coward. In your eastern Tennesee redneck "I'm gonna knock yer
>dick in the dirt" sort of way, I think that you are working up the
>courage to challenge me to a duel. Is that your intent?

Sounds like 'Steve' wants to meet you at Dayton to FIGHT you.

That must be the way the "new" U.S. ham radio is...a bunch of
angry radio users wanting to FIGHT anyone who doesn't agree
with them. Not for me. Must be why I haven't gotten an amateur
license after so long as a professional in radio-electronics.

>> Putz is purely an opinion on my part, but one that seems to be well
borne
>> out.
>
>You wouldn't recognize "well borne out" even it it were your own
>father.

'Steve' would be totally ignorant of the world around him if he were
on Fairfax in Los Angeles or Maxwell Street in Chicago. Lots of
Yiddish heard there...sometimes pejoratives are shouted. :-)

'Steve' da goyim must be a closet Yiddisher. :-)

>> Steve, K4YZ
>>
>> BTW, typo Lord..."It's" is just that......Have a beer...calm down (Lennie
>> says you're angry!)
>
>I was practicing ebonics, Quitedipschit. The former surgeon general
>had no problem with it, why should you?

Tsk. 'Steve' LIED again. I've never been angry at you, Brian. :-)

More tsk. Poor very-EX-marine couldn't celebrate the birthday.
He is no longer INVOLVED there. Must have made him angrier
than two people. Perhaps all his personalities are angry?

>Your move.

Hopefully to another venue...but I don't expect it. :-)

Pity that this "Quitefine" condones such blather from 'Steve.' Haven't
seen a thing from Jimmie-as-another-newsgroupie under the
"Quitefine" label. Or maybe he's just out of damp hankies...?

NONE of those "selves" are IN the USMC.

None of him is INVOLVED!

USMC didn't want him no more.

In fact, MARS was STARTED by the U.S. Army. The USAF was
next to join. The USN (and by default the USMC) joined MARS
LAST. Tsk.

Must have been a very long clean-up of those "hostile actions?"

"Steve" says "MARS >>IS<< amateur radio!" Hi hi and a ho ho.

DoD say they run it. Tsk. "Steve" try to argue with da gubmint?

Must be. Maybe he "see" da gubmint at Dayton? :-)

He can't do that. He is superior because of his federally-tested
high rate of morsemanship. Superiors do NOT condescend to
agree with lowly inferiors. :-)

>Disagreeing with him is PCTA SOP; requires no effort whatsoever. Be a
>Maverick like John McCain and take an itsy bitsy chance for -once- in
>your life.

John McCain served in the USN, flying in combat.

Jimmie got as far as looking up Bear bombers in some book.

Jimmie knew Soviet air tactics like the back of your hand. He
saw the film "Dr. Strangelove: <etc.>" and that makes him an
"expert" on SAC, TAC, Manny, Moe, and Jack. :-)

>Rest of your bile snipped.

Well, that bile has to go somewhere. Better here than polluting
some PA community. :-)

> Only old-timers ever used "kilocycle."

What I wanna know is what happened signals in transit when the change was made from "cycle" to "hertz". How did a signal which left the transmitter thinking it was 2716 kilocycles find it's way to a receiver which was tuned to 2716 kilohertz.

Triva question: What worldwide allocation was 2716 kilo(cycles)(hertz)?

> learned something from daddy. :))

How are you attributing this to the President, Jim?

Administrative/Bureaucratic screw-up? Sure. There's at least a
couple "The IRS listed me as dead" stories in the news every year, but
no one tries to blame the President. Five year olds and octogenarians
have received draft notices before. Still not the President's fault.

Sorry, but even with his failings, I give President Bush my
support. Unlike his predecessor, when G.W. speaks, it's about the
business of the nation, and I believe him to be sincere. The last
idiot had to spend every waking moment defending himself against his
chronic lies and deceit.

President Bush went toe-to-toe with the Red Chinese "out of the
box" in his presidency and didn't back down. Rather that duck and
cover after 9/11, he put his money where his mouth was, and struck
back at the scum who perpetrated the attacks. Those low-life vermin
have been running scared ever since.

I disagree with some of his handling of Iraq, but I agree it had
to be done. It's easy to post-event critique the war, but overall it
could have been a heck of a lot worse...

No...I wasn't mistaking Scumbag Billy for the President...Not by
a Green Mile.

Ah! You have some directives - but you didn't actually visit every US Army radio installation and check on their Morse Code use.
>
> I was IN the military doing communications. You were NOT.

I've never claimed to have been.

You've never been in amateur radio, Len, but you claim to know all about it and lecture us on How It Should Be and What's Wrong With Amateur Radio Is All Due to The ARRL and Morse Code.

For example, you accused VEs and the ARRL of fraud here because of the licensing of some very young children - even though you don't know the children or VEs involved.
>
>>> Tsk. Well, you've had all that "experience" at Washington Army
>>> Radio because you read a rather dated (almost pre-WW2) article

>>> Network) in which I took part. No sweaty dah.
>>
>>Was the article factual or not?
>
> For pre-WW2 operations at WAR (Washington Army Radio) it MAY
> have been.

It was dated 1942 IIRC. It described what was going on then at WAR. WW2 started in 1939 (some say 1937, with the Japanese invasion of Manchuria) and the USA entered the war in late 1941. So the article describes WAR in 1942, which was definitely during WW2, not pre-WW2.

> It was NOT FACT on WAR operations during the Korean
> War active phase (1950-1953) nor after.

What about *during* WW2?

It's clear you have a very hard time accepting positive things written about
Morse Code.
>
> Prove I am telling an untruth.

You're telling an incomplete truth, in such a way as to distort the facts.
>
>>It seems to me that you're very opposed to Morse Code getting *any* credit
>>for *anything* useful.
>
> Tsk. You can't Google (or DejaVu) very well.

Sure can.!
>
> The Morse-Vail Telegraph system was EXCELLENT in terms of near-
> instant communications in the 1800s.

First time I've ever seen you use the word "excellent" to describe Morse Code.

> That first example of a working
> COMMERCIAL telegraphic system of 1844 was eventually copied all
> over the world.

And was *excellent* for many decades to follow.

But there were other commercial electrical and optical telegraphs, some
predating or simultaneous with Morse's system. Morse's system eventually
displaced them.

> The original morse code was changed from an all-number code to
> include the English alphabet and some punctuation marks. That lead
> to variations in the "morse code" to include characters in nearly all
> alphabetic-form written languages.

> Let's face it. "Morse code" is almost as old as wired telegraphy
> itself - 160 years old as of this year.

And still going strong.

How old is the incandescent lamp? The internal-combustion gasoline-powered
reciprocating engine? The steam turbine?

> "Morse code" was EXCELLENT as a means to communicate via
> early primitive radio. In fact, it was about the ONLY way to use radio

That's your opinion.

However, suppose it is a fact. Why is it important to amateur radio *today*?

> The knowledge of immediate neighbors to amateur radio bands in
> the EM spectrum should be existant for the purposes of regulation
> of all radio. The FCC recognizes this. The NTIA recognizes this.
> The ITU recognizes this.

What the heck is that supposed to mean?

Are you trying to say that hams should know what services exist outside the
amateur bands? If so, I agree!

> James P. Miccolis doesn't recognize it.

I'm not sure if I do or not because your statement is so unclear.
>
>>C'mon - explain it to us. Show us why it has any importance at all.

> gabbling - in here - about the space business, presidential

> politics, choo-choo trains, the entertainment industry, and food
> and drinking establishments in a small part of Pennsylvania.

Just answer the question, Len.

Even if the US military stopped using Morse code for routine long distance
point to point military communications half a century ago, what possible
connection does that have to amateur radio testing requirements in 2004?

You keep telling us a supposed fact, but you don't explain its relevance.
>
>>I was simply showing that Morse Code use in the US military continued for

Checking my "recent" SS logs shows K0HB in every one from 1987 to the present except 1999. When did you get that call, Hans?

SS '99 was a tough year, Hans. I moved to the present QTH at the end of October that year and it took some doing to get set up. Didn't even hit the air until well into Saturday evening and I was bushed from moving. Sorry I missed you then - but you were heard many times this weekend after our SS QSO.

I also worked Dan, W4NTI, this year and many others.

Final results this year 424 QSOs in 76 sections for almost 65,000 points in about 15 hours - best so far at this QTH. Was doing really well until conditions went to pot around 0000Z last night. All of a suddent the signals went all watery- what's up with that?

Got a few nice runs going but most of my contacts were hunt'n'pounce.

Missed NT, PAC, PR and AB - heard VY1JA on 20 Sat PM but the band was fading fast. Never heard the other three sections at all. Not too bad for the Southgate Type 7, paper logs, a homebrew inverted V at 37 feet and one tired op.

Maybe next year I'll use the K2. With a 150 W amp. And get a shack computer, and redo the antenna, and.....

73 es wait till next year de Jim, N2EY

Of the 120,000 ARRL members how many do you suppose have any interest
at all in tinkering vs. the number who depend on the League to defend
our spectrum spaces? How many NRA members do you suppose would support
a shift in NRA funds from their PACs into more tinkering with loads?

> 8.)

All I needed for SS-WAS was Hawaii. (sigh) Wyoming, normally the
hardest of the 48 in CONUS, was my 6th section! Heard a KL7 on *80*,
first time in the SS for me.

My first SS was 1968 - 81 QSOs.

The spots were definitely down; the bands above 40 were out of
commission sooner after sundown than I recall from previous years.
This is actually an advantage for us small-station ops, because it
pushes the action down to 80 and 40, where beams and other big
antennas are less numerous. Of course a low dipole isn't going to
match 2 elements at 80 feet on 40, but that's the game.

Now I just have to get in shape to hold on past 3 AM local...

I was out and about early in the contest on Saturday so I got a very late start. Most of the early going was S&P though I decided to CQ on 80m in the middle of the night. I must've heard VY1JA about the same time as Jim. He had a good signal for some minutes on 20m and it grew weak rapidly.

I spent very little time on Sunday, having spent a goodly portion watching the Steelers slap the snot out of the Eagles. Band conditions on Sunday were dreadful. The watery, echo-laden, raspy signals indicated aurora and those conditions extended down to even 80m. Never caught a peep of N2EY, K0HB or W4NTI. Maybe we were all CQing at the

same times or all using S&O at the same time.

Can't be or won't be, Leonard? Fact is, I did a tour in Viet Nam in the
USAF, 1970-1971. You made insulting remarks about it. I can Google
some up for you if you like.

> Or those who "served the country" by being a minor civilian sort for a
> defense contractor on a USN aircraft carrier. [I tend to dismiss
> the claims of "taking photographs for naval intelligence" as having
> any importance]

When does a defense contractors work aboard a USN aircraft carrier
become a "minor civilian sort". You say it all when you add the
parenthetical material. You seem to have difficulty making a statement
about someone's work or military service without insulting them. This
has long been your method.

> "Dave" wants his State experiences enobled as wonderful radio
> acts for the nation or something.

When was that ever claimed by me?

By the way, Dave is my name. It needs no quotes. "William's" name
isn't William.

> State Department just doesn't
> have the size or scope to compete with the U.S. military commo
> facilities.

...or it could just be that needs of the Department of State aren't the
same as those of the U.S. military.

> The DSN has taken over the day-to-day task for that
> and the U.S. Army Signal Corps has long served State for the
> vital sensitive communications means (which "Dave" will

> immediately argue since he is most sensitive to any sort of
> negativism to "Dave").

Dave will argue because there are no facts to support your silly claim. The U.S. Army Signal Corps not only hasn't "long served State", it plays absolutely no role in providing the U.S. Department of State with communications. Once again, you make a statement of supposed fact with the truth omitted. Do you ever get anything correct?

> Ooooo...I've "insulted" a member of the USMC? Horrors!
>
> Yes, I was unaware that the USMC is hero of the U.S. military and

> (which means 'penis head').

Steve has never insulted my Air Force service. You have. Brian Burke has. I get the feeling that Steve's pet name for you has nothing to do with the fact that you served in the Army. He insults you, not the Army.
You aren't the Army.

> Tsk. I am "guilty" of an inter-service faux pas according to your

> medically-discharged USMC veteran). Mea culpa.

You weren't insulted for standing retreat. You were insulted for trying to associate their deaths with your service. The two were not connected except that you later served in the same unit in a different place. Your attempt backfired in much the same way as your "Sphincter post", the one in which you describe how someone feels in battle. The only problem was, you were never in battle.

> You've neglected to "correct" me on many other things that
> involved communications that I've experienced since 1956...

> present-day PRC-104 is part of that IHFR effort since 1986.

That's all nice. Thanks for yet another irrelevant restatement of your knowledge of SINCGARS, IHFR and small unit military communications. I never served in a small unit nor do I need SINCGARS or IHFR in my amateur radio operations. Come to think of it, I never needed them in my Department of State communications.

> >> Show us your heroism and wonderful deeds that makes YOU so

You're long on emotion and short on facts, Len. There are any number of things taking place in the world on which you've not commented. By your logic, you must support or condone them.

You've actually SEEN them being made? I'm really impressed. I guess
that makes you something of an expert. I've actually sold them but I've
never SEEN them being made.

> [that part of Greenlee is just two large rooms of punch-making

Did you snaffle any Q-Dope?

> I have a small collection of Greenlee punches which have been
> gathering rust and dust.

That's believable. Apparently, you don't actually build anything. I'll
bet you've SEEN people build things.

I was out there too but like many others, I only worked it for a few hours.
Once I nabbed Idaho to make sure I had another contact for my CW only WAS
(the card I already have was not correctly filled out), I didn't stay with
it much longer.

Apparently this is another instance where you don't have your ducks in a
row. It looks as if we'll not have Michael (not Mikey) Powell for four
more years.

http://www.ucomics.com/tonyauth/

One thing I have always found interesting is how some folks will not
bother to even read the very Book they try to impose on others.

For example, consider the whole "creationism" concept. It comes not
from the creation story itself, but rather from trying to reconcile a
long geneaology that goes from Christ back to Adam. Some bishop, about
120 years ago, figured out from that genealogy that the earth was
created in 4004 BC. October 22, IIRC. If you take the geneaology
literally, the earth cannot be billions of years old, and so a whole
theory of pseudoscience had to be made up to try to make a literal
interpretation of the Book appear "scientific".

But if you actually *read* the book of Genesis, you see that there are
two creation stories that conflict with each other. They cannot both
be literally true, because their timelines are different.

Or consider the whole same-gender civil-union thing. A lot of folks
oppose them because of some Old Testament quotes involving
abominations and such. But these same folks accept divorce, despite
clear New Testament prohibitions against it.

AFAIC, it's fine if people want to believe the earth is about 6000
years old - just don't try to pass such things off as "science".

What next - will books and films like "Inherit The Wind" (Scopes "Monkey Trial" be banned?

Remember - Science *lost* that trial. Less than 80 years ago.

> Well, that bile has to go somewhere. Better here than polluting
> some PA community. :-)
>
The bile on rrap comes from the three-way Steve/Len/Wiliam whizzing
contest. You all must get something from it, because you sure put a
lot of effort into it.

btw, Len, a little googling turned up the fun fact that Steve began
calling you a putz back on August 6, 1999 - if not earlier. Of course
you had previously made a habit of calling him "nursie" and other
names, and referring to him by the wrong gender.

Perhaps you need to try some new techniques if you want him to stop.
But I don't think you want him to stop.

Spare me . . . more snake oil . . one more of your bogus "claims to
fame" eh Sweetums?

No Sweetums, you did not "invent" the concept at all, you have zero
kudos coming from anybody.

The first time mention of ham radio spectrum space being conceptually
equated to the national parks in this NG was in this post:

15 March 1991: "The most important aspect of ham radio that far
transcends all 'practical' needs is that it is the first National Park
of the Mind. In this park the interplay of fields and waves, of
charges and ions is as stimulating to the mind and refreshing to the
spirit as the spouting of gysers, the gamboling of antelope and the
leaping of fishies in Yellowstone. National parks, forests, and
wilderness areas are preserved for their own sake even though there
are many who feel that 'practicality' and 'jobs' demand that they be
exploited to extinction. If eagles and owls are worth saving, so are
hams. [:-) -- Jim Grubs - via Fidonet Node 1:234/1 UUCP:
...!uunet!w8grt!jim.grubs INTERNET: jim.grubs@w8grt.fidonet.org."

Dan Finn 4 Aug 1995: "The radio bands, as we know, are a resource
reserved for entertainment purposes, much like a national park. RF
Spectrum is simply another natural resource, no different in concept
than a forest/river etc.. Each could be put to commercial purposes.
Each could be used for any purpose. If we set aside a portion of a
national park for wilderness camping (this is not logical! it is very
primitive to camp with tents etc. etc.. In the 20th century we have
RV's, jet ski's, whatever!) But each portion of the park has
entertainment value of a different sort. What we do NOT do is make the
whole park available only to those . . "

w3rv 8 Feb 2000: "There is nothing wrong with Federal sanctioning and support of recreational activities. The National Park Service just that on a volume basis, and you might note that the NPS gets pretty feisty about letting the commercails they deal with mess up their recreational turfs. It's a direct analogy, the FCC can and should justify and protect our use of spectrum space on the same bases."

Then four years ago you finally decided you liked the concept and first piped up on the topic on 16 Oct 2000.

Don't fib Sweetums, you know I'm out here doing my homework.

> LenAnderson@ieee.org

Maybe someday the idea will gain some real traction but it'll be a
hard sell because of the bunker mentalities which will have to be
dealt with. In both Newington and in D.C.

Christmas is coming, do it soon!

Just don't get him some "worldband" POJ.

He might actually enjoy an older receiver (!) simply because it's
different and not like everything else in RatShack. He sounds like the
kind of kid who may be specifically attracted to the uniqueness of HF

radio.

It's just incomplete, that's all. Too narrowly focused. It's like
saying the only reason for sex is to make babies.

> > The whole pile of nonsense about justifying
> > ham radio based on ham emergency comms and "advancing the state of the

> > art" is farcical at best and needs to be recognized as such so that we
> > get that silly old baggage out of the way.

Hams still do *public service* comms (covers emergency comms and more)
and also "advance the state of the art" in some ways. But that view is
way too limited.

> > The HF spectrum is a
> > protected and regulated natural resource

THAT is the hard sell to the antiscience folks. It's clear from the
comments of BPL folks that they just don't understand HF radio.

> > which needs to be shared by

> > "antiquated technologies" like feet. Hypocrites.

That idea needs to be pushed as part of the definition of ham radio.
"Radio for its own sake" is the phrase I use.

See below for more on the parks concept.
>
> > Point 2: The coming of BPL is exactly analogous to the timber

> > courts and now it's our turn.

Yup. And it's not just timber companies; all sorts of commercial
interests want to "develop" the "wilderness". Remember Storm King.

> > Point 3: With respect specifically to funding the ongoing ARRL battle

One of the main things the eco-folk do is to politically battle with
the regulators.

We antenna-huggers need to do the same.

>
> The issue is not that we are relevant or up to date. We're not.

I disagree!

We *are* relevant, simply because we are "the public"! And we are as
"up to date" as we need to be.

> The issue is that we are the public.

BINGO!

> Hobby use of the radio spectrum is justifiable
> on it's own terms, and that is a matter of politics, not technology.

I'd use words like "noncommercial/recreational" or "avocational"
rather than "hobby", but the concept is valid.

There should be a place for folks to enjoy radio for its own sake. As
its own justification. That does *not* mean there should be no rules
or standards, however.

> CB and FRS are parts of the same thing,

Not really.

Those services are meant for specific comms purposes. That's why
they're channelized, used only approved equipment (in theory anyway)
and are restricted in other ways (you're not going to work the world
on FRS or CB).

> whether we like to admit it or not, and
> amateur radio is for the few who know a kilocycle from a bicycle!

> The parks argument is a good one. The spectum is a natural resource like
> the forest and the shoreline, and like those it shouldn't be for business
> use only.
>
I agree 100%. But we have to be careful in how we present the idea.

First off, amateur radio is more than "just a hobby" because of the
public service comms, technical innovation, and educational angles. We
must not lose those things - we're adding, not subtracting.

Second, although millions of acres are preserved as parks in the USA,
the total percentage of area in that system isn't very large, compared
to how big the USA is. If we try to sell ham radio on the park idea
alone, we might find ourselves with a tiny percentage of the spectrum
we now have.

Third, it's a political process, as noted above.

That said, some interesting results naturally follow from the parks concept.

For example, although parks are theoretically open to all citizens, there are usually requirements to be met for access - particularly to the most unique places. Sounds like licenses, multiple classes of license, tests, etc. Also fees, but the park system is not expected to be a revenue source.

Many parks exist to preserve natural/wilderness locations. To do this, a lot of technology is specifically prohibited (motor vehicles, etc.) or severely restricted. This makes a lot of folks unhappy because you can't just drive the RV or SUV everywhere.

Recreational technology usually doesn't exactly compare to commercial or military technology. Sailing ships are all but gone from the commercial shipping and fishing venues, and from the world's navies as well. But they are all over the place in recreation.

There's also the issue of historic preservation. Often this takes the form of preserving skills, methods, and similar things from "modernization". For example, in Ridley Creek State Park there is a "Colonial Plantation" where things are done as close to 18th century ways as possible.

What makes the parks system work is that it offers experiences which *cannot* be had other ways. No simulator or modern technology can replace early morning on a pristine mountain lake, or sleeping under the stars, or climbing a mountain under your own power.

Most of all, it's a constant political struggle. There are always folks who want to cut the trees, dam the rivers, grade the roads, drill for oil, mine the minerals, and otherwise "develop" the open spaces. Or make them more "accessible", even though it is their wild nature which makes them attractive in the first place.

Here's another concept to add to the pie - sports. Look at the London, Boston and New York City marathons (just to name three) - they involve the use of public facilities (roads) for a use that is basically recreational for 99+% of the participants. Some folks would rather that all those marathoners just run on treadmills rather than tying up traffic for a day. Radiosport is a big part of amateur radio.

Now - how do we sell that package?

>about someone's work or military service without insulting them. This
>has long been your method.

Tsk. I'm just copying the style of the PCTA...all "heroes" if from
their glowing self-styled words. Any NCTA never "really" served
their country.

>> "Dave" wants his State experiences enobled as wonderful radio
>> acts for the nation or something.
>

>When was that ever claimed by me?

It's in between just about every line you write... :-)

>By the way, Dave is my name. It needs no quotes. "William's" name
>isn't William.

I thought you were "K8MN." Apparently that is the formal name
that other PCTA use in referring to you.

"Dave" is your legal signature? It isn't "David?" Tsk. My bad.

>> State Department just doesn't
>> have the size or scope to compete with the U.S. military commo
>> facilities.
>
>...or it could just be that needs of the Department of State aren't the

>
>Dave will argue because there are no facts to support your silly claim.
>The U.S. Army Signal Corps not only hasn't "long served State", it plays
>absolutely no role in providing the U.S. Department of State with
>communications.

Tsk. For years the U.S. Army Signal Corps has been assigned
the task of providing communications for the President of the
United States. When the "hotline" was operational (I don't know
if it still is), it was manned by Signal Corps personnel at the
Washington end. [public references are available for that
information]

The DSN is now the main communications means for all government
communications, military and civilian alike. The DSN is maintained
by military personnel, usually by USA or USAF units depending on
the territory.

>Once again, you make a statement of supposed fact with
>the truth omitted. Do you ever get anything correct?

Well, "Dave without the quote marks," last time I looked, the
President of the United States is rather OVER the State
Department. [see any government organization chart]

The "hotline' (continuous TTY circuit, Washington to Moscow)
served for at least three decades, all that time run at this end
of the circuit by U.S. Army Signal Corps people. [one can see
a couple photos of that in David Kahn's "The Codebreakers,"

NYT best-seller listing in the early 1960s]

>You weren't insulted for standing retreat. You were insulted for trying
>to associate their deaths with your service.

Tsk. "Steve" deliberately made that "dishonor" statement (false)
and you must back it up because you want to personally insult
me. Rather SOP in here among the rezidentura PCTA extras. :-)

>The only problem was, you were never in battle.

Almost true. :-) Was shot AT just once on TDY to the Land of
Morning Calm. Never saw who did the shooting.

In retrospect, I think it might have been a PCTA or some USMC
rebel. :-)

Perhaps BOTH? :-)

>That's all nice. Thanks for yet another irrelevant restatement of your
>knowledge of SINCGARS, IHFR and small unit military communications. I
>never served in a small unit nor do I need SINCGARS or IHFR in my
>amateur radio operations. Come to think of it, I never needed them in
>my Department of State communications.

What DID you use? AN/FRC-93? :-)

Tsk. Department of State communications isn't REALLY relevant
to U.S. amateur radio, is it?

Hello, do I hear some hypocrisy from a PCTA critic? :-)

>You're long on emotion and short on facts, Len.

Tsk. You are big on wind-bagedness and get your "corrections"
WRONG.

Sunnuvagun!

>There are any number of
>things taking place in the world on which you've not commented.

Tsk. Those aren't relevant to U.S. amateur radio POLICY, are they?

I mean, such as U.S. Presidential politics...the space business...
choo-choo trains...professional medical practice...oh, a whole host
of things mentioned by the PCTAs who are "involved" in something
or other...but not discussing amateur radio policy matters. :-)

Radio is radio. It obeys physical laws, not the laws of mankind.

The FCC is tasked to regulate all of U.S. civil radio. Oddly enough,
the FCC is most "involved" in U.S. amateur radio even though NO
commissioner or staffer is required to hold any amateur radio license.

Sunnuvagun!

Tsk. Rev. Jim is readying another Sermon on the Antenna Mount?

Rev. Jim "puts a lot of effort" into making SURE that all those
he thinks need "corrections" get those "corrections!" QED.

>btw, Len, a little googling turned up the fun fact that Steve began
>calling you a putz back on August 6, 1999 - if not earlier. Of course
>you had previously made a habit of calling him "nursie" and other
>names, and referring to him by the wrong gender.

Tsk. You are still being Judge and Jury via Google, aintfcha?

:-)

When Rev. Jim runs out of arguments in the present, he MUST
resort to Googling to "prove" something.

Jimmie thinks he can "win" some past arguments by repeating and
rehashing OLD ones? Of course...if for no other reason that Jimmie
Must Be Right in his own mind. Subject itself be damned, concentrate
on defaming the opponent in order to "win." Tsk.

>Perhaps you need to try some new techniques if you want him to stop.

Ah...you must have run out of damp hankies to slap folk on the
wrist as self-styled moderator! :-)

>But I don't think you want him to stop.

Doesn't really matter to me. There will ALWAYS be some yo-yo
out there who can't argue a subject for squat and does the personal
insult thing in order to "win an argument." :-) Those are all easy
marks. Plenty of them. :-)

So...have you found a new job yet to resume your "professional"
career?"

>
>Spare me . . . more snake oil . . one more of your bogus "claims to
>fame" eh Sweetums?

Tsk. I don't "claim any fame" to that analogue.

Face the music (even if you are deaf), amateur radio is basically
a HOBBY. There should be absolutely nothing wrong with that
concept.

There is a lot of wrong with the political statements saying it is a
"vital need to the nation" such as for "emergency comms" as if
the time was prior to WW2 when two-way radios were scarce.

Pretending that amateur radio is "vital" is a lot of POLITICAL
bullshit and you know it.

>Then four years ago you finally decided you liked the concept and
>first piped up on the topic on 16 Oct 2000.

Tsk. You are getting to be the sensitive old maid like "Jim" and
want to rehash, redo, reargue old old arguments. Do you think
you might "win" one if it is endlessley repeated? (think again)

>Don't fib Sweetums, you know I'm out here doing my homework.

I could care less, "Sweetums."

You are NOT interested in the subject at all, just want to FIGHT
in words. Too bad. You are already self-penalized by having

both typing hands tied behind your somewhere. Tsk.

Try living in the PRESENT, not the past and not in Google.

Bet you can't do it. :-)

>
>And they worried about the unwashed getting into amateur radio.

I would imagine that ham radio is a fun activity. But, forbidden
to talk about it (one of the radio gods says "I'm not involved!"), I
won't speculate. :-)

What all the "boosters" want is fresh, clean minds that can be
easily brainwashed into believing the olde-tymers are the
absolute masters of radio (because they are skilled in morse-
manship). Minimal life experience is required since some
exposure to the adult population will demonstrate those olde-
tymers aren't of such god-like sagacity or nobility as they
pretend to be. Young teen-agers are wanted for that by the
olde-tymers...because that is how They got into it...as
teeners.

Those of adult age are really not wanted by the olde-tymers.
Those olde-tymers have found out (the hard way) that the
olde-tymers aren't worshipped by other adults as gods of

radio...and usually don't come close to such god-hood.
They feel exposed (with some anxiety) when in the company
of those who've had actual radio communications experience
in radio other than amateurism.

Let me explain myself. I'm not a Republican by any stretch of the imagination, but I think that the GOP has been hijacked by ... well, I can''t think of any nice names for them. They seem to call themselves compassionate conservatives. This seems to mean extreme social consrvatism combined with a fiscally liberal policy, except that all their compassion is directed towards the Fortune 500!

1773. Beer and Microchips

Newsgroup: rec.radio.amateur.policy
Date: 2004-11-09 03:24:07 UTC
From: Lloyd <Lloyd@pizzalloydsvan.net>
Message-ID: <cmpd75emu0@pita.alt.net>

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

/want some microchips with your beer?

Seems there's a rumor that microchips have been found in beer cans and bottles. Meaning the imbiber quaffs away, not realizing he just swallowed a tiny device which reports all sorts of personal information about himself.

One expert was quoted as saying that heavy drinkers may have several of the microchips operating away in their bodies.

I may do a webcast on this subject soon.

73,

Lloyd

Oh oh. We've been caught. The FCC said the dreaded "hobby" word.

Jim, it looks like your "it's an avocation, not a hobby" arguement
didn't work - they seem to have seen right through it and figured out
what Amateur Radio is anyway! Nice try, though.

#$%^&*! Professionals - they sure know their stuff! (and their own

I am a nurse, Jim. That he cares to feminize it is of no concern to me.

And he IS a putz. In 2004 as in 1999. It's the ONE thing he DOES have practical experience in.

The words were there right in front of you and still you managed to get
it wrong.

Farnsworth spacing used in morse testing - Somebody said it was okay.

Your amateur radio operation from Somalia - Somebody said it was okay.

Yeah, a whole year. Care to figure out how much longer than John Kerry
I was there?

> What EXACTLY did you do? (you never mentioned that in detail)

(no, I never mentioned that in detail. enjoy the suspense.)

> >You made insulting remarks about it.
>
> I ran out of medals and pretty certificates (suitable for framing).

You no more issue medals and certificates for Viet Nam service than you
participate in amateur radio.

You should get together with your fan base, "William". Both of you
spend your time reading what isn't written instead of what is written.

> >By the way, Dave is my name. It needs no quotes. "William's" name
> >isn't William.
>
> I thought you were "K8MN." Apparently that is the formal name
> that other PCTA use in referring to you.

We radio amateurs are issued callsigns. We often use them instead of
names. You may forgiven your ignorance since you're an outsider.

> "Dave" is your legal signature? It isn't "David?" Tsk. My bad.

Is "Len" your legal signature? You recently told someone to call you
"Len"...or "lenanderson@ieee.org".

> Tsk. For years the U.S. Army Signal Corps has been assigned

> the task of providing communications for the President of the
> United States.

That's wonderful news, Leonard. I'd have never known anything about WHCA if not for your insider information. Haw! The Department of State is not involved with POTUS communications. My involvement in the '97 Clinton-Yeltsin summit in Helsinki dealt with obtaining frequency clearances, obtaining permission to use repeater sites, obtaining a mini-switch and the requested number of telephone lines for the site hotel and obtaining a number of cellular telephones for the President's team.

> When the "hotline" was operational (I don't know
> if it still is), it was manned by Signal Corps personnel at the
> Washington end. [public references are available for that
> information]

And this information, relates to Department of State communications in what particular way?

> The DSN is now the main communications means for all government
> communications, military and civilian alike.

...or so you apparently think.

> The DSN is maintained
> by military personnel, usually by USA or USAF units depending on
> the territory.

In all my days in Department of State communications, I never once dealt with military personnel as a part of normal operations. That was true whether the circuit was radio or leased line.

> >Once again, you make a statement of supposed fact with
> >the truth omitted. Do you ever get anything correct?
>
> Well, "Dave without the quote marks," last time I looked, the
> President of the United States is rather OVER the State
> Department. [see any government organization chart]

I see you've come up with a simplistic view of things. That might have led you to make some very incorrect assumptions. The President is OVER the CIA. The military does not run CIA communications. The President is OVER the Department of Energy. The military does not run Department of Energy communications. You're batting zip.

> The "hotline' (continuous TTY circuit, Washington to Moscow)
> served for at least three decades, all that time run at this end
> of the circuit by U.S. Army Signal Corps people. [one can see
> a couple photos of that in David Kahn's "The Codebreakers,"
> NYT best-seller listing in the early 1960s]

...and this relates to the Department of State in what way? The fact is, you're completely incorrect. You don't know what you're talking

about.
If it is possible, you know less about Department of State
communications than you know of amateur radio.

> >You weren't insulted for standing retreat. You were insulted for trying
> >to associate their deaths with your service.
>
> Tsk. "Steve" deliberately made that "dishonor" statement (false)
> and you must back it up because you want to personally insult
> me. Rather SOP in here among the rezidentura PCTA extras. :-)

Yes, Steve made a statement. If I'm not mistaken, he viewed your
attempt to associate yourself with those who died in battle as
dishonoring them.

I note that you snipped my remarks about your classici Sphincter post,
the one in which you described what it feels like to be in battle. My
remakrs ended with the line below:

> >The only problem was, you were never in battle.
>
> Almost true. :-) Was shot AT just once on TDY to the Land of
> Morning Calm. Never saw who did the shooting.

You were shot at once while on TDY and that became the basis for the
Sphincter Post?

> In retrospect, I think it might have been a PCTA or some USMC
> rebel. :-)

Or one of your Army colleagues who tired of hearing the ADA lectures.
:-)

> Perhaps BOTH? :-)

Why? Were you shooting off your mouth about morse testing back then?

> >That's all nice. Thanks for yet another irrelevant restatement of your
> >knowledge of SINCGARS, IHFR and small unit military communications. I
> >never served in a small unit nor do I need SINCGARS or IHFR in my
> >amateur radio operations. Come to think of it, I never needed them in
> >my Department of State communications.
>
> What DID you use? AN/FRC-93? :-)

Keep guessing.

> Tsk. Department of State communications isn't REALLY relevant
> to U.S. amateur radio, is it?

It is at least as relevant as your experience at ADA--a lot more recent
too. Then again, you brought up my State Department service.

> Hello, do I hear some hypocrisy from a PCTA critic? :-)

None at all. You, Leonard Anderson, introduced my State Department communications experience. You crowed about how the military controls Department of State communications. You were flat wrong.

> >You're long on emotion and short on facts, Len.
>
> Tsk. You are big on wind-bagedness and get your "corrections"
> WRONG.

"Bagedness"? This newsgroup has never seen your equal as a pontificating windbag. Trouble is, much of your information is just wrong.

> Sunnuvagun!
>
> >There are any number of
> >things taking place in the world on which you've not commented.
>
> Tsk. Those aren't relevant to U.S. amateur radio POLICY, are they?

Ohhhhhhhh. So when you commented to Jim about supporting or condoning something Steve might have written, you meant just those things directly relating to amateur radio policy? Is that correct?

> Radio is radio. It obeys physical laws, not the laws of mankind.
>
> The FCC is tasked to regulate all of U.S. civil radio.

That has to be a tough assignment since, as you said, radio obeys only physical laws, not the laws of mankind. Just how does the Commission manage to make radio behave?

> Oddly enough,
> the FCC is most "involved" in U.S. amateur radio even though NO
> commissioner or staffer is required to hold any amateur radio > license.

It isn't odd at all, Len. Let me paint your a picture:

FCC: Regulates radio. Paid to do so. Involved in amateur radio.

Radio Amateurs: Tested and licensed to use radio under Part 97 of FCC regs. Taking payment for providing radio service is prohibited. Involved in amateur radio.

Len Anderson: Does not regulate amateur radio. Not licensed under Part 97 of FCC rules. Not involved in amateur radio.

There.

That's wrong (again), Leonard. He is saying that Soviet "Bear" bombers
could not have been a threat to you during your military service in
Japan, despite what you indicated here. As with your well known
"Sphincter Post", it leads some of us to question your character.

> >The bile on rrap comes from the three-way Steve/Len/Wiliam whizzing
> >contest. You all must get something from it, because you sure put a

>
> :-)

Jim is? Not at all, Leonard. Your archived words and the dates on
which you posted them are archived. It is proof of your actions. In
this case, things didn't happen the way you claim they did.

> When Rev. Jim runs out of arguments in the present, he MUST
> resort to Googling to "prove" something.

...and it looks like the Google archives of newsgroup posts did just
that. The archive seems to prove that version of events is not correct.

> Jimmie thinks he can "win" some past arguments by repeating and
> rehashing OLD ones?

When you start the "Jimmie" stuff, it is obvious that he has zapped you
good. You made a recent statement and issued it as a factual account of
something which took place. The trouble is, the Google archives say
otherwise.

> Of course...if for no other reason that Jimmie
> Must Be Right in his own mind. Subject itself be damned, concentrate
> on defaming the opponent in order to "win." Tsk.

Diversion on your part. If you didn't want to be batted around on this
issue, you could have refrained from, "Well, HE started it".

> >Perhaps you need to try some new techniques if you want him to stop.
>
> Ah...you must have run out of damp hankies to slap folk on the
> wrist as self-styled moderator! :-)

When did it become Jim's job to regulate Steve?

"Pay no attention to those archives. They'll only confuse the issue".

If you never wrote some of the things you write, you wouldn't have to defend them. If you never claimed originality for something which you were not the first to use, you'd not be tap dancing now, desperate to change the subject. Geez, Leonard, fess up and have done with it. It'll be good for your soul.

I could but doing a bit of homework and Googling around for opportunities to let you hang yerself in public by yer own petard *again* is a "mission" which is so easy to pull off I just gotta do it once in awhile. Since alternative jollies are a bit difficult to come by these days.

Dit-dit Sweetums?

I look at it as an opportunity to be suffered thru. After four years
of their reign this country will have had an overdose of their BS and
they'll permanently bury themselves never to be heard from again. At
which time us real Republicans will move back into the scene and get
back to sane jousting with the Democrats.

>Are you gonna bring back your classic "sphincter post", Leonard?

March 28, 2000, right here on rrap.

Fun fact about that one:

The thread "Morse Monleys Are The Worst" (which contains that classic) was started by "Meg A Hertz" who preferred to be anonymous. Discussion went on between various parties but "Lenof21" (the screen name Len was using at the time) did not get involved until the classic. IOW, it wasn't a response to someone's posting to him.

Most interesting, of course, is the fact that Len tears into and insults the *military radio communications* experiences of another, without provocation of any kind.

Unless....perhaps "Meg A Hertz" and "Lenof21" are one and the same?

Not to mention the fact that that scumbag has dumped tons of "...back in 1953.." crap on this NG, and then has the temerity to TRY and lambaste Amateurs over "living in the past".

And then has the EXTRA temerity to suggest anyone else is living "in the past".

Leonard H. Anderson is a two faced putz. Period.

You did?

Google up the post for us, please, Len. Your experience in computer-modem communications should make that an easy task for you.

>>Spare me . . . more snake oil . . one more of your bogus "claims to >>fame" eh Sweetums?
>
> Tsk. I don't "claim any fame" to that analogue.

Then why did you mention it, Len?
>
> Face the music (even if you are deaf), amateur radio is basically
> a HOBBY. There should be absolutely nothing wrong with that
> concept.

What's "wrong" is when someone denies that there are any "nonhobby" aspects to amateur radio. Such as emergency and public service communications, education, advancing the state of the art, etc.

> There is a lot of wrong with the political statements saying it is a
> "vital need to the nation" such as for "emergency comms" as if
> the time was prior to WW2 when two-way radios were scarce.

Who says amateur radio is a "vital need to the nation", Len?

You seem to think that amateur radio plays no role in emergency or public service communications, based simply on your experience watching TV after one California earthquake. That's simply too limited a view.

For example, when the space shuttle burned up on reentry, there were groups of volunteers out looking for debris that survived the disaster. Some groups had communications provided by amateur radio, others depended on cell phones. The post-operation consensus was that cell phones were not well suited for that type of operation, and that amateur radio played a key role in the groups that had hams providing the communications. That's all documented by people who were there.

Were those hams participating in a HOBBY when they volunteered?

> Pretending that amateur radio is "vital" is a lot of POLITICAL
> bullshit and you know it.

What does it take for something to be "vital", Len?

Until relatively recently, we here in the USA got along very well without the internet, personal computers, cell phones, cable TV, satellite TV, satellite radio, PDAs, VCRs, flat-screen TVs, microwave ovens and a host of other things. So none of those things are "vital" either, are they? They may have improved our lives, but they are they "vital"?

(I personally remember when all those things, and more, did not exist or were not available to/practical for the average middle class American. And we lived happy and successful lives without them, so they're not "vital".)

>>Then four years ago you finally decided you liked the concept and
>>first piped up on the topic on 16 Oct 2000.
>
> Tsk. You are getting to be the sensitive old maid like "Jim"

Whom do you refer to, Len?

Can't be me, because I'm neither old nor a maid. And my name is Jim, not "Jim".

Perhaps you are angry that W3RV pointed out your mistake. You should thank him for the new information. Don't you like new information?

> and
> want to rehash, redo, reargue old old arguments. Do you think
> you might "win" one if it is endlessley repeated? (think again)

Len, *you* brought up the past. You wrote:

"About six years ago (or so) in here I tried to point out...."

W3RV pointed out that the concept is much older than six years. Now you're trying to weasel out because you've lost that point. Doesn't work.
>
>>Don't fib Sweetums, you know I'm out here doing my homework.
>
> I could care less, "Sweetums."

Then why are you arguing, Len? Just say you were wrong and move on. Thank W3RV for the correction and live in the present.
>
> You are NOT interested in the subject at all, just want to FIGHT
> in words. Too bad. You are already self-penalized by having
> both typing hands tied behind your somewhere. Tsk.

That's a pretty good description of *you*, Len.
>
> Try living in the PRESENT, not the past and not in Google.
>
> Bet you can't do it. :-)
>
Let's see if *you* can, Len. Your mistake is now in the past. Move on. Here, I'll start:

Whoever originated it, the park analogy has some merit. It also has a bunch of problems.

For example, the above FCC comments weren't about the definition of amateur radio at all. They were a way of saying why amateurs wouldn't get special protection from BPL interference. That's a political decision, not a technical one. In fact, it admits that interference can/will happen, but that ham radio isn't important enough to merit special consideration.

If ham radio is promoted as a HOBBY, why should it get special protection?

Also, you say the park service has a million acres, give or take. What percentage of the USA is that? Hams in the USA currently have access to about 3.55 MHz of HF (3-30 MHz) spectrum. That's a little more than 13% of HF, and most of it is worldwide exclusive amateur. On VHF, UHF and above we have similar levels of allocation.

Would you want to see those allocations reduced?

What allocations do you think hams should have, as a "hobby"?

Someone (I think it was you) mentioned the 75 MHz RC hobbyists. They got a few channels of VHF at low power, using only approved radios. Is that sort of allocation adequate for hams?

One main reason they got those channels was that the classic 27.255 MHz RC channel was overrun by illegal cb use.

What's wrong with promoting amateur radio *now* as a combination of *all* its contributions - recreation, public service, technical innovation, education, emergency communications, and more?

How do we do this and avoid the pitfalls such as "OK, you hams get the same spectrum percentage as the park service has land area" or "you hams get the same channelized, low power equipment as the RC folks"?

IIRC, the practice exams on eham use the actual Q&A that appear on the real
exam. So if you can easily pass the practice exams, there's a very good chance
you'll pass the real thing.

>Oh oh. We've been caught. The FCC said the dreaded "hobby" word.

Then we should grab that ball and run with it!

Most of what goes over the internet is "routine communications and hobby
activities" isn't it?
>
>Jim, it looks like your "it's an avocation, not a hobby" arguement
>didn't work - they seem to have seen right through it and figured out
>what Amateur Radio is anyway! Nice try, though.

I say we go forward on all fronts - hobby, avocation, public service,
education, emergency comms, tinkering, advancing SOTA, etc. If they're gonna
call us hobbyists, then make it a badge of honor, same as was done with the
title "ham operator".

And this goes beyond the BPL battle. Take CC&R struggles - would they try to
ban other "hobbies"?

I like the term "antenna-hugger" myself.

The phrase I object to is "*just* a hobby" - which denies the components of
public service, education, etc.

>>>> which is reserved for ALL the citizenry to enjoy for their recreation.
>
>You did?
>
>Google up the post for us, please, Len. Your experience in computer-modem
>communications should make that an easy task for you.

Old-maid Jim is still into Googling bullemia syndrome, still trying to
argue old, old postings all over again. And again. And again. :-)

>>>Spare me . . . more snake oil . . one more of your bogus "claims to
>>>fame" eh Sweetums?
>>
>> Tsk. I don't "claim any fame" to that analogue.
>
>Then why did you mention it, Len?

Tsk. All WRONG again, Jimmie? :-)

Kellie brought up "claim to fame." I just repudiated it.

All you want to do is re-argue the PAST. :-)

>> Face the music (even if you are deaf), amateur radio is basically
>> a HOBBY. There should be absolutely nothing wrong with that
>> concept.
>
>What's "wrong" is when someone denies that there are any "nonhobby" aspects to
>amateur radio. Such as emergency and public service communications, education,
>advancing the state of the art, etc.

Of course...like "advancing the state of the art" in home building
all-tube rigs in the 1990s. :-)

>> There is a lot of wrong with the political statements saying it is a
>> "vital need to the nation" such as for "emergency comms" as if
>> the time was prior to WW2 when two-way radios were scarce.
>
>Who says amateur radio is a "vital need to the nation", Len?

ARRL. :-)

>You seem to think that amateur radio plays no role in emergency or public
>service communications, based simply on your experience watching TV after one
>California earthquake. That's simply too limited a view.

Three earthquakes, not just one. :-)

Tsk. I was out there, not just "watching TV." Didn't see any "ham
emergency" crews at the disaster centers. Maybe they were all
home using CW on their rigs? ["CW gets through when nothing else
will...even without electrical power!"]

>For example, when the space shuttle burned up on reentry, there were groups of
>volunteers out looking for debris that survived the disaster. Some groups had
>communications provided by amateur radio, others depended on cell phones.

Riiiiight, Jimmie...ONLY hams were any aid, right? Nobody else could
do the job? :-)

The Press has been negligent again, reporting false news...they should
have listened to the ARRL (who knows the "real" truth as opposed to
"wrong" truths spoken by the government, NASA, etc.).

>The post-operation consensus was that cell phones were not well suited for
that
>type of operation, and that amateur radio played a key role in the groups that
>had hams providing the communications. That's all documented by people who
>were there.

Nooooo...that's all documented by the ARRL. :-)

>Were those hams participating in a HOBBY when they volunteered?

They were being good citizens. All those hams got their licenses so they
could later Hunt for Space Shuttle Debris?

>> Pretending that amateur radio is "vital" is a lot of POLITICAL
>> bullshit and you know it.
>
>What does it take for something to be "vital", Len?

Constant reading and listening to the ARRL. :-)

>Until relatively recently, we here in the USA got along very well without the
>internet, personal computers, cell phones, cable TV, satellite TV, satellite
>radio, PDAs, VCRs, flat-screen TVs, microwave ovens and a host of other
>things.

...including ALL radio! [depends on your frame of reference and yours is
hanging a bit crooked...straighten it up...]

>So none of those things are "vital" either, are they? They may have improved
>our lives, but they are they "vital"?

Tsk. Nice try but the "reducto ad absurdum" approach is strictly
grade-school style "debate." :-)

"We here in the USA?" :-) Does that mean that only YOU are in the
USA and everyone else in other states are NOT in the USA? :-)

>(I personally remember when all those things, and more, did not exist or were
>not available to/practical for the average middle class American. And we
>lived happy and successful lives without them, so they're not "vital".)

There we all have it!

If Jimmie "remembers what it was like" then That's It. :-)

>Can't be me, because I'm neither old nor a maid. And my name is Jim, not
>"Jim".

Okay, your name is "Jim," not "Jim." :-)

>Perhaps you are angry that W3RV pointed out your mistake. You should thank him
>for the new information. Don't you like new information?

Kellie no got "new" information. :-)

Kellie wanna practice mental bullemia and barf up old postings.

>W3RV pointed out that the concept is much older than six years. Now you're
>trying to weasel out because you've lost that point. Doesn't work.

"Weasel out?!?" :-)

Tsk. You morsemen weren't able to successfully argue your cases
for anything in the past...now you disguise your later comments on
old things as some kind of "truth" of "new things?"

That's NOT "weaseling out." That's just plain nuts, morseman.

>>>Don't fib Sweetums, you know I'm out here doing my homework.
>>

>> I could care less, "Sweetums."
>
>Then why are you arguing, Len? Just say you were wrong and move on. Thank
>W3RV for the correction and live in the present.

I could care less, "Jim" (or would you rather be called "Jim?")

:-)

>Whoever originated it, the park analogy has some merit. It also has a bunch of
>problems.

A long time ago, Teddy Roosevelt thought so...but managed to get the
National Park Service going... :-)

>For example, the above FCC comments weren't about the definition of amateur
>radio at all. They were a way of saying why amateurs wouldn't get special
>protection from BPL interference. That's a political decision, not a technical
>one. In fact, it admits that interference can/will happen, but that ham radio
>isn't important enough to merit special consideration.

Thank you for the re-interpretation, Holy Father. Blessed be...

>If ham radio is promoted as a HOBBY, why should it get special protection?

Why should ANY of the recreational hobby radio things get ANY
protection, "Jim?" Especially those evil, wicked, mean and nasty
CB types? :-)

Part 95 has a definite section on the Radio Control Radio Service. Pure
hobby activity.

>Also, you say the park service has a million acres, give or take. What
>percentage of the USA is that? Hams in the USA currently have access to about
>3.55 MHz of HF (3-30 MHz) spectrum. That's a little more than 13% of HF, and
>most of it is worldwide exclusive amateur. On VHF, UHF and above we have
>similar levels of allocation.

Tsk. All you know is about HF. Typical PCTA extra. :-)

>Would you want to see those allocations reduced?

Why do you ask? :-) You seem to NEED a redirection in the thread
so you imply some "fault" by MANUFACTURING some thing I've NOT
stated.

>What allocations do you think hams should have, as a "hobby"?

What allocations do YOU think should be there? :-)

>Someone (I think it was you) mentioned the 75 MHz RC hobbyists. They got a few
>channels of VHF at low power, using only approved radios. Is that sort of
>allocation adequate for hams?

Yup. You are vainly trying to MISDIRECT with a MANUFACTURED
"dispute." :-)

I used it as an example of POLITICAL manuevering by a purely HOBBY
activity. The AMA was successful. They got LOTS of channels, not just
"a few."

The AMA also has about 170 thousand members. Curiously, that's
about equal to members of the ARRL. :-)

>One main reason they got those channels was that the classic 27.255 MHz RC
>channel was overrun by illegal cb use.

Tsk! WRONG! ONE frequency at any large flying site (or pond or waterway
or car racing place) is NOT ENOUGH for more than a few people. :-)

Like all PCTA extras, you are getting off on "illegal CB" again. :-)

>What's wrong with promoting amateur radio *now* as a combination of *all* its
>contributions - recreation, public service, technical innovation, education,
>emergency communications, and more?

Tsk. More wrong "wrongness!" :-)

I've never said what you've claimed about "promotion." But, you've gotten
so
thick about hollering "wrong" all the time, I don't suppose you can stop.

The ARRL propaganda is - consistently - the SAME. It also seems to be
ineffective OUTSIDE of amateur radio. ARRL is constantly doing SELF-
PROMOTION and the government can see that as easily as anyone not in
amateur radio. ARRL has apparently begun to Believe itself in all that
propaganda and self-glorification.

ARRL just hasn't gotten into mainstream media with any of that noble and
glorious "technical innovation, education, emergency communications," let
alone the "recreation" part. The "public service" part is notably lacking,
everywhere but at the ARRL and its output.

>How do we do this and avoid the pitfalls such as "OK, you hams get the same
>spectrum percentage as the park service has land area" or "you hams get the
>same channelized, low power equipment as the RC folks"?

Use CW. "CW gets through when nothing else will..."

<sound of raucous laughter omitted...>

>> United States.

>
>That's wonderful news, Leonard. I'd have never known anything about
>WHCA if not for your insider information. Haw! The Department of State
>is not involved with POTUS communications.

That's a growing problem in the Republican adminstration...they
get the wrong information on the communications?

Gosh, several Presidents of the U.S. of A. (both parties) have
USED that "hotline" at various times to communicate directly
with the USSR in Moscow. Guess that was "improper" or
something, huh? Those fool adminstrations should have gone
through "proper diplomatic procedures" through the State?

>My involvement in the '97
>Clinton-Yeltsin summit in Helsinki dealt with obtaining frequency
>clearances, obtaining permission to use repeater sites, obtaining a
>mini-switch and the requested number of telephone lines for the site
>hotel and obtaining a number of cellular telephones for the President's
>team.

So, you were "involved" but, at the same time, "not involved" with
POTUS (President of the United States) communications.

You are both ways. Anyplace else that is called "hypocrisy."

>> When the "hotline" was operational (I don't know
>> if it still is), it was manned by Signal Corps personnel at the
>> Washington end. [public references are available for that
>> information]
>
>And this information, relates to Department of State communications in
>what particular way?

You tell us...(as you surely will, being the "expert" Man from State).

Last I looked the President had the ULTIMATE U.S. say on direct
diplomatic communications, and general stuff like that. You say
that isn't so? That State operates "independently?" Tsk.

>> The DSN is now the main communications means for all government
>> communications, military and civilian alike.
>
>...or so you apparently think.

No, I don't "think" so. The U.S. government SAYS so.

But, whathehell, a "seven hostile actions" veteran in here, another
PCTA extra, said that "MARS >>IS<< amateur radio!" DoD says
the DoD defines who is what on MARS.

PCTA extras are "naturally" the most "correct" ones, right?

>> The DSN is maintained
>> by military personnel, usually by USA or USAF units depending on
>> the territory.
>
>In all my days in Department of State communications, I never once dealt
>with military personnel as a part of normal operations. That was true
>whether the circuit was radio or leased line.

Riiiiight. NEVER had any military officer at any embassy, correct?

There were NEVER any USMC guards at embassies (who had their
own radios)?

>I see you've come up with a simplistic view of things. That might have
>led you to make some very incorrect assumptions. The President is OVER
>the CIA. The military does not run CIA communications. The President
>is OVER the Department of Energy. The military does not run Department
>of Energy communications. You're batting zip.

Riiiiight..."Dave" says there is NO such thing as "chain of command."

If "Dave" says so, it IS so. Amen.

>> The "hotline' (continuous TTY circuit, Washington to Moscow)
>> served for at least three decades, all that time run at this end
>> of the circuit by U.S. Army Signal Corps people. [one can see
>> a couple photos of that in David Kahn's "The Codebreakers,"
>> NYT best-seller listing in the early 1960s]
>
>...and this relates to the Department of State in what way? The fact
>is, you're completely incorrect. You don't know what you're talking
>about.

Well, heck and darn, neither does the U.S. government (except for
Department of State) "know what it is talking about" since they
released the information on that "hotline" and many other things.

>If it is possible, you know less about Department of State
>communications than you know of amateur radio.

Riiiiight...both are highly classified, sensitive, SECRET things.

Or, as in the "Dave" definition "Ayes Only" classification ("correct"
only if all others agree or say "Aye" to whatever "Dave" says).

>Yes, Steve made a statement. If I'm not mistaken, he viewed your
>attempt to associate yourself with those who died in battle as
>dishonoring them.

Who is this "Steve?"

Someone using that name keeps shouting that all who disagree
with him are "penis heads" in Yiddish and saying they are
"pathological liars!" [tsk...he's never been a qualified pathologist
or psychiatric expert]

>I note that you snipped my remarks about your classici Sphincter post,
>the one in which you described what it feels like to be in battle. My
>remakrs ended with the line below:

Your remarks NEVER end. They keep on dredging up old, old
messages, you fighting them all over and over again. Hopefully
you might "win" one if you keep barfing up old defeats?

>Why? Were you shooting off your mouth about morse testing back then?

No. Tsk. You've completely IGNORED what I've said about morse
testing from my experience.

Prior to being assigned at ACAN station ADA, I was a Believer that
morse code skill was a "necessary" one for radio communications.
I was wrong and ACAN, plus the USAF radio nets and USN stations
doing fixed-point-to-fixed-point communications didn't use any morse
code to handle massive amounts of message traffic. That was a mere
51 1/2 + years ago.

Reality is a harsh thing. Some can't take reality and retreat into a
fantasy that "radio" is still like it was in the 20s and 30s. Some
grab onto morsemanship fiercely for amateur use and demand they
get special dispensation, status, rank, and privilege for their beloved
morsemanship (tested to old federal standards).

>> >That's all nice. Thanks for yet another irrelevant restatement of your
>> >knowledge of SINCGARS, IHFR and small unit military communications. I
>> >never served in a small unit nor do I need SINCGARS or IHFR in my
>> >amateur radio operations. Come to think of it, I never needed them in
>> >my Department of State communications.
>>
>> What DID you use? AN/FRC-93? :-)
>
>Keep guessing.

Tsk. YOU don't know, do you? Or, you want to imply some kind of
"secrecy" and therefore "don't want to say." :-)

Amateurs may know the AN/FRC-93 as the commercial version of
the Collins Radio KWM-2. :-) [Collins made two versions of that
one, full crystal set for the commercial version - entire HF range -
and a limited one for the amateur market]

According to the Army's Center for Military History, the FRC-93 had
important work in Vietnam to do all those MARS contacts with the
'States (the other 50, not the Department). That's from the Signal
Corps History of Vietnam operations.

>> Tsk. Department of State communications isn't REALLY relevant
>> to U.S. amateur radio, is it?
>
>It is at least as relevant as your experience at ADA--a lot more recent
>too. Then again, you brought up my State Department service.

I did? You mentioned your illustrious "foreign service" a long time ago...along with great tales of experiences in Africa at the cashew nut center of Guinea-Bisseau. Something about "doing good things with CW in the '80s where CW got through when nothing else did" (or words to that effect). :-)

>"Bagedness"? This newsgroup has never seen your equal as a
>pontificating windbag. Trouble is, much of your information is just
>wrong.

Well then, you should bring out your "fact" that the rest of the U.S. government and all sorts of journalism media are "wrong."

Show us the "truth" oh noble god of radio...set us straight and we will all bow down and kiss your ring in appreciation at the next Holy Service.

>> The FCC is tasked to regulate all of U.S. civil radio.
>
>That has to be a tough assignment since, as you said, radio obeys only
>physical laws, not the laws of mankind. Just how does the Commission
>manage to make radio behave?

Tsk, tsk, TSK. The FCC doesn't "make radio behave." It is supposed to make the PEOPLE who use civil radios behave.

Yup, you've got some kind of post-traumatic stress disorder going since you can't get simple civics lessons straight. Poor "Dave."

>It isn't odd at all, Len. Let me paint your a picture:
>
>FCC: Regulates radio. Paid to do so. Involved in amateur radio.
>
>Radio Amateurs: Tested and licensed to use radio under Part 97 of
>FCC regs. Taking payment for providing radio
>service is prohibited. Involved in amateur radio.
>
>Len Anderson: Does not regulate amateur radio. Not licensed under Part
> 97 of FCC rules. Not involved in amateur radio.

Bad "painting" "Dave." Technique is awful. Your paintings will not hang in any gallery...but "Dave" should not hang in a gallery, rather stuffed and mounted in an unnatural history museum as a species of Humus Morsemanus Ridiculum.

According to "Dave" rules, the FCC is NOT INVOLVED because they aren't required to license themselves in the amateur radio service!

Since the FCC is "not involved," that means they are paid for doing illegal work! Call the Supreme Court! Throw the rascals out! :-)

"Dave" is a licensed amateur, "involved!" I'm just a lowly pro in electronics engineering, a citizen of the USA, entitled to Rights under the Constitution of the United States of America. "Dave" says that is insufficient, "no involvement!"

"Dave" recently said "I show NO interest in radio" because I didn't get an amateur license FIRST!" Tsk. I should have gone through the ranks like He did...so that I could be both "interested" and "involved!" My bad. :-)

Dirty rotten scoundrels, those professionals! Don't know that they should respect and adore all those amateur morsemen!

Run with what? To paraphrase Orwell, the FCC sees all license holders
as equal, but some are more equal than others.....amateur radio
apparently being on the 'less than equal' side of the
equation......non-essential, per se.

>
>Most of what goes over the internet is "routine communications and hobby
>activities" isn't it?

...which has what relevance to the topic of amateur radio and BPL?

>>
>>Jim, it looks like your "it's an avocation, not a hobby" arguement
>>didn't work - they seem to have seen right through it and figured out
>>what Amateur Radio is anyway! Nice try, though.
>
>I say we go forward on all fronts - hobby, avocation, public service,
>education, emergency comms, tinkering, advancing SOTA, etc. If they're gonna
>call us hobbyists, then make it a badge of honor, same as was done with the
>title "ham operator".

Nice flag waving, Jim, but is there a strategy behind that lofty statement? Go forward how, with what, to whom, and to what goals and objectives? Or was that just a "one for the Gipper" thing that you thought sounded real cool?

The regulatory folks have made it pretty clear - do you have a plan to have them overruled somehow? By whom? - the decision on BPL is entirely within their sphere of control.

>
>And this goes beyond the BPL battle. Take CC&R struggles - would they try to
>ban other "hobbies"?

CC&Rs are outside the jurisdiction of the FCC, I believe.....

>
>I like the term "antenna-hugger" myself.

Great! Just wait until the FCC helps the ARRL complete the sequel to their most popular book (entitled "2 Meters And Down - Amateur Radio In The 21st Century"). The little antennas for our only remaining bands will be much easier to hug!

>
>---
>
>The phrase I object to is "*just* a hobby" - which denies the components of
>public service, education, etc.

Which, unfortunately, is what the FCC R&O quoted above boils down to - no special protection warranted, it's just a hobby activity. The emergency communications aspect was dismissed pretty neatly in their statement.....the condescending "while we recognize..." line.

1801. FCC suspends amateur license issuances.

Newsgroup: rec.radio.amateur.policy

Source record: 99699

Bad news to prospective hams. The FCC ULS system has suffered
a major programming glitch in that is was no longer issuing sequential
licenses. Here's the scoop from the ARRL website:
The FCC has stopped issuing Amateur Service license grants while it
attempts to unravel an apparent computer programming glitch. The FCC
posted a public alert on the Universal Licensing System (ULS) site on
November 5. At this point, no one seems to know when the problem will
be fixed.

"The granting of Amateur applications has been temporarily suspended,"
the FCC announcement says without further explanation. "We apologize
for the inconvenience." The Commission has given no indication when
processing might resume, but when it does, the FCC likely will pull
back more than 125 Group D (2x3) amateur call signs it mistakenly
issued out of sequence and grant the applicants new in-sequence call
signs. Although they eventually may be set aside and replaced, all
call signs showing up in the ULS database remain legal.

The difficulties began October 28, when the FCC implemented a ULS
software change that caused applications to be processed improperly.
ARRL Volunteer Examiner Coordinator Manager Bart Jahnke, W9JJ, says
the FCC was forced to stop processing amateur applications after
attempts to correct the initial error only seemed to make things
worse. "The FCC is still trying to get its arms around the problems,"
he said this week.

Jahnke said the ULS problem will have no effect whatsoever on
volunteer Amateur Radio examination sessions that have been scheduled
or already held. The only known impact at this point will be in how
fast the FCC is able to grant licenses (and assign call signs)
resulting from examination sessions.

For some as-yet-undetermined reason the October 28 modification caused
all amateur applications from the nation's VECs to be shunted into
"Pending 2" status, flagging them for manual review without any
justification.

By November 2, the FCC thought it had things under control again, and
it reprocessed all the applications in the queue. At first blush, all
looked to be in order, Jahnke said, but closer inspection revealed
that the system had failed to grant some routine requests for new
sequential call signs. "By the afternoon, we realized that the FCC had
erroneously begun issuing new Group D call signs in several districts
from altogether new call sign blocks--out of sequence from where
processing in those districts had last ended," Jahnke said.

While the first and third call districts were unaffected, the FCC apparently jumped from issuing call signs in the KC2Nxx sequence to the WQ2Axx sequence, Jahnke said. It also had assigned WQ4xxx, WQ5xxx, WQ7xxx and WQ9xxx call signs. In the eighth district, there was a gap between KD8xxx to KM8xxx call signs, while in the tenth district the Commission went from KC0Txx to WI0Axx. In the sixth district, the sequence shifted from KG6Wxx to KI6Axx.

The ARRL VEC has been working with personnel in the FCC's licensing branch to identify where the FCC had been in the call sign sequences, where it had jumped to and where it was supposed to be.

Jahnke says the problem appears to have affected only Group D call signs. He emphasized that any call signs the FCC issued are in the ULS database and therefore are valid, and licensees may use them on the air.

"Just don't get too familiar with them," he advised. "It is our understanding that at some point, the FCC will set aside the out-of-sequence grants and issue new call signs to affected licensees."

The FCC has announced that due to "scheduled maintenance," the ULS on-line filing, application and license search and several other non Amateur Radio-related functions will be unavailable starting Friday, November 12, at 9 PM EST until Monday, November 15, at 6 AM EST. Electronic batch file processing will stop November 12 at 5 PM, and VECs will not be able to send and retrieve files during the down period. This weekend's transaction files and Sunday's database public access files will not be available until Monday morning, the FCC says.

Twelve-year-olds have two new hot buttons per day on average and I
learned a long time ago to be very selective about financing those hot
buttons. I'll *loan* him my TS-50 for awhile and see where he takes
it.

The "BPL folks" understood quite well what HF radio is all about going
into the brawl. They set us up like ducks at a boardwalk shooting
gallery which meshed beautifully with the agenda of the current
"antiscience" leadership at the FCC and up.

No. What matters is *now*, as in drilling in the wilderness preserves
in Alaska.

> > Brian, you're right!

> on FRS or CB).

I realize that we're all "bred" to diss the CBers but when it comes to
passing real emergency traffic to the authorities over the years they
have us beat by probably a couple orders of magnitude. As far as
"working the world" is concerned there was a local CBer here (recent
SK) who worked all 22 Swiss cantons which I have yet to pull off for
the Helvitia 22 award and the sucker had the cards to prove it. All of
it with a big quad and a perfectly legal 10W type-accepted CB ssb
xcvr. Yeah, I know, his DXing wasn't legal. Neither are Henry 3K amps
and pairs of 4-1000As with their plate meter needles pinned to the
right side.

I agree with Alun, all not-for-profit personal comms bands need to
fall under the same basic protective umbrella or we'll wind up in a
divide & conquer maneuver.

> First off, amateur radio is more than "just a hobby" because of the
> public service comms, technical innovation, and educational angles. We

> must not lose those things - we're adding, not subtracting.

That's EXACTLY the kind of entrenched 'wayback thinking which needs to put behind us because most of it's BS.

> Second, although millions of acres are preserved as parks in the USA,
> the total percentage of area in that system isn't very large, compared

> alone, we might find ourselves with a tiny percentage of the spectrum
> we now have.

There wouldn't be any need to do that sort of number-juggling, just edit the opening paragraphs of Part 97 and leave details like the band edges alone.

> Recreational technology usually doesn't exactly compare to commercial
> or military technology. Sailing ships are all but gone from the

Baxter is toast on this if it is indeed true. The AARA is a farce, and filing a lawsuit like this is only going to get him sued in return and since this lawsuit if frivolous, Baxter may be end up on the short end of the stick - especially from a financial standpoint. I hope his insurance company is ready for this one. If he loses, he may have trouble getting insurance in the future. Insurance companies don't like to insure people who pull these kinds of tricks.

Brian sees them as "brainfarts" and our company sees the program as a
particularly effective source of new product ideas. So much so that
in the past three fiscal years 18% of our new-product revenues had
their origins in the PBI-incubator.

Damned RIGHT they get paid for every minute, and it's money well
spent.

I do. Others do. It is done because things you currently write are in
direct contradiction.

> Tsk, tsk. You should have done better AT THAT TIME to defend
> your own positions.

But, Leonard, the contradictions have been written recently.

> Bringing up old postings again and again is just a mental form
> of bullemia. Or just plain bull.

I know of "bulimia". Is that what you mean? If so, you may consider
that others are now sticking their fingers down your throught in hopes
that you'll gag up a hunk of truth.

> Keep on trying, though, eventually you'll make everyone sick and
> tired of you trying to win one of those "discussions."

The discussion is won just as soon as your earlier words are compared to
your recent words. Both can't be correct. In this case, we have you
claiming credit for an idea someone else introduced. So you see, this
time doesn't really deal with an old post of yours, but an old post of
someone else's. :-)

> >If you never claimed originality for something which you

Well put, Brian. Give me a *good* conservative candidate to vote
for.... puleeze!

The Republicans ahve been every bit as hijacked by the pseudo-religious
right as tha Democrats have been by the lesbian/gay alliance for blah,
blah,blah.

Makes me a little twitchy when one of the party platforms is to grease
the skids for the bibilical Armageddon...... 8^0

Correct. Calling it Just a hobby is like calling Nascar racing "just a
bunch of people in cars. Self illuminated ignorance.

You can't admit that a number of hams are involved in the public service
aspects of amateur radio?

> >> There is a lot of wrong with the political statements saying it is a

But it is a matter of public record that radio amateurs participated.
Names and calls have been published. How do you account for that?

> Tsk. I was out there, not just "watching TV." Didn't see any "ham
> emergency" crews at the disaster centers. Maybe they were all
> home using CW on their rigs? ["CW gets through when nothing else
> will...even without electrical power!"]

To make this clear for us, you were actually at the involved disaster
centers, Len? All of 'em? So you know for a fact that no radio
amateurs were involved in these earthquakes?

> >For example, when the space shuttle burned up on reentry, there were groups of

You didn't really address what was stated, did you?

> The Press has been negligent again, reporting false news...they should
> have listened to the ARRL (who knows the "real" truth as opposed to
> "wrong" truths spoken by the government, NASA, etc.).

I've seen no government nor NASA reports stating, "No radio amateurs
were involved". If you've seen such a statement, kindly provide
references so that the rest of us may be educated.

> >The post-operation consensus was that cell phones were not well suited for

There are plenty of good citizens. Not all of them are equipped to to
what radio amateurs did in this case. Why the dodge?

> >> Pretending that amateur radio is "vital" is a lot of POLITICAL

That's quite a rant, Leonard. There's a running QST item most months
which is called "Media Hits". What kind of items do you think it
highlights?

Good to see that someone admits it. I have personally had my live saved
a few times, and probably saved a few more by my Mobile CB.
Once I almost ran into "Hitlers armored car" (I kid you not) when the
trailer that was towing it got jacknifed and stuck across the top of
gaurdrails on Interstate 80. Nowhere to go, and all I could do was stand
on the brakes hard. I was on a curve in the road, and a trucker coming
the other way just yelled "You gotta stop NOW!" THere have been other
incidents, but none so dramatic.

Why don't we have a little contest. Kind of like the old "guess how many beans are in the jar" thing.

How many times in a year does Len post "Tsk"?

I'll start by guessing 800 times.

Enough interest and I might just google the last year's tsk total.

- Mike KB3EIA -

ohhhh, the debbil made me do it! 8^)

> Tsk. YOU are the one trying to relate unrelated sentences. :-)

You wrote them and placed one above the other. If they are truly
unconnected, there is no reason to have written the second of them. It
would have been totally out of place.

> Oh, thank you, thank you, Holy Father!

No need for that, Leonard. My friends call me Dave or K8MN. You may
call me Mr. Heil.

> Are we supposed to kiss your ring, too?

If you did, I'd think you a little light in your loafers.

> >> "Dave" is your legal signature? It isn't "David?" Tsk. My bad.

> get the wrong information on the communications?

I was there for the Clinton administration. They didn't change the
policy on communications.

> Gosh, several Presidents of the U.S. of A. (both parties) have
> USED that "hotline" at various times to communicate directly
> with the USSR in Moscow. Guess that was "improper" or
> something, huh? Those fool adminstrations should have gone
> through "proper diplomatic procedures" through the State?

Let's see, you've told us that the hotline was manned by military
personnel. State Department personnel are not military personnel. The
White House is not part of the Department of State. I see some gaps in
your story.

> >My involvement in the '97
> >Clinton-Yeltsin summit in Helsinki dealt with obtaining frequency
> >clearances, obtaining permission to use repeater sites, obtaining a
> >mini-switch and the requested number of telephone lines for the site

> >team.
>
> So, you were "involved" but, at the same time, "not involved" with
> POTUS (President of the United States) communications.

Arranging the things described was strictly administrative in function.
I handled no Presidential message traffic. POTUS travels with his own
comm center.

> You are both ways. Anyplace else that is called "hypocrisy."

Any place else and you'd have to have your ducks in a row, old fellow.

> >> When the "hotline" was operational (I don't know

>
> You tell us...(as you surely will, being the "expert" Man from State).

I've told you.

> Last I looked the President had the ULTIMATE U.S. say on direct
> diplomatic communications, and general stuff like that. You say
> that isn't so? That State operates "independently?" Tsk.

I've said no such thing. The words I wrote contained everything
necessary for the average man to understand.

> >> The DSN is now the main communications means for all government

> the DoD defines who is what on MARS.

I'm not discussing MARS operation, Len. The Department of State doesn't
handle MARS traffic.

> PCTA extras are "naturally" the most "correct" ones, right?

What? Did you ever handle message traffic for the U.S. Department of
State?

> >> The DSN is maintained
> >> by military personnel, usually by USA or USAF units depending on

> Riiiiight. NEVER had any military officer at any embassy, correct?

Ohhhhhhh. I see where you're going. You think that if some Colonel from the Defense Attache Office comes to the comm center and sez, "Any message traffic for me?", that constitutes military involvement in State Department communications? Is that where this is headed?

> There were NEVER any USMC guards at embassies (who had their
> own radios)?

Sure, did you think the MSG's worked in the comm center? They had radios, but not their own. They had my radios and used them on my net. They never handled any State Department message traffic. Then again, in most embassies, every employee had hand-held radios.

> >I see you've come up with a simplistic view of things. That might have

You keep trying to make the assertion that Department of State communications takes place through military channels. T'ain't so.

> >If it is possible, you know less about Department of State
> >communications than you know of amateur radio.
>
> Riiiight...both are highly classified, sensitive, SECRET things.

Much of the information on the State Department is classified. I can't tell you. None of the information on amateur radio is classified. In the end, it makes no difference. Your ignorance of both is large.

> Or, as in the "Dave" definition "Ayes Only" classification ("correct"
> only if all others agree or say "Aye" to whatever "Dave" says).

One can only speculate as to what that is supposed to mean. Is that what you call humor, Len?

> >Yes, Steve made a statement. If I'm not mistaken, he viewed your

> messages, you fighting them all over and over again. Hopefully
> you might "win" one if you keep barfing up old defeats?

Your "Sphincter Post" describes what a man feels under battle. I can respost it if your memory is hazy. The problem is, the one hostile (you assume) shot aside, you weren't in battle. It can't be simpler than that.
You fabricated out of whole cloth.

> >Why? Were you shooting off your mouth about morse testing back then?
>
> No. Tsk. You've completely IGNORED what I've said about morse
> testing from my experience.

You don't have any morse experience to speak of and yes, I've completely ignored it.

There are things which I can't tell you. There are things which I
choose not to tell you.

> Amateurs may know the AN/FRC-93 as the commercial version of
> the Collins Radio KWM-2. :-) [Collins made two versions of that
> one, full crystal set for the commercial version - entire HF range -
> and a limited one for the amateur market]

Uhhhhhhh, the commercial version of the KWM-2 was the KWM-2. Do you
refer to the military version?

After the KWM-2 came the KWM-2A. It has the second crystal deck, though
one can't describe it as covering the entire HF range. Parts of the
entire HF range could be covered in 200 KHz segments if you had the
crystal packs. I have one sitting right here.

> According to the Army's Center for Military History, the FRC-93 had
> important work in Vietnam to do all those MARS contacts with the
> 'States (the other 50, not the Department). That's from the Signal
> Corps History of Vietnam operations.

That's all swell, Len. It has nothing to do with the Department of
State communications; nothing to do with amateur radio and nothing to do
with my tour in Viet Nam. I did use some Collins KWM-2A units in Viet
Nam and never had a thing to do with an FRC-93. The units I used bore
the KWM-2A label and engravings. I wasn't in the Signal Corps nor was I
in the Army. I never handled communications for the President of the
United States in Viet Nam, even though we recognized that he had--how do
you put it?--the ULTIMATE say. If he wanted us to do anything
differently, he wasn't talking.

> >> Tsk. Department of State communications isn't REALLY relevant

> with CW in the '80s where CW got through when nothing else did"
> (or words to that effect). :-)

Yes, you did. I'm not talking about "a long time ago". I'm talking
about just recently. Neither your manufactured quote nor words to that
effect were used by me.

> >"Bagedness"? This newsgroup has never seen your equal as a

> aren't required to license themselves in the amateur radio service!

You'd better go look at that picture, Len. I wrote that the FCC IS
involved.

> Since the FCC is "not involved," that means they are paid for doing
> illegal work! Call the Supreme Court! Throw the rascals out! :-)

You look silly when you spout off after not having read something
correctly. You're a regular Emily Litella.

> "Dave" is a licensed amateur, "involved!"

That's correct.

> I'm just a lowly pro in
> electronics engineering,

You're right.

> ... a citizen of the USA, entitled to Rights
> under the Constitution of the United States of America.

That's also right.

> "Dave"
> says that is insufficient, "no involvement!"

It certainly isn't sufficient to make you knowledgeable about how
amateur radio should be regulated. It isn't sufficient to make you a
licensed radio amateur. The fact is, you aren't involved in amateur
radio.

> "Dave" recently said "I show NO interest in radio" because I didn't
> get an amateur license FIRST!" Tsk. I should have gone through
> the ranks like He did...so that I could be both "interested" and
> "involved!" My bad. :-)

You cannot at this time, do as I did. You could have earlier but you
didn't. You could have met the current requirements for amateur radio
licensing but you didn't. You don't have quite enough interest to
actually get off your duff and take an exam for any class license.
You are not involved.

> Dirty rotten scoundrels, those professionals! Don't know that they
> should respect and adore all those amateur morsemen!

It reads like a bunch of sour grapes on your part, Len. You don't have
to adore or respect any radio amateur. You aren't in the game.

I think you're low by fifty.

We could take a shot at guessing the numbers on:

"Gunnery Nurse"

"Nursie"

"Reverend Jim"

"Sermon on the Antenna Mount"

"Herr Robust"

"Kellie"

"Poor baby"

"Church of St. Hiram"

or more recently, "Bullemia"

That's all very nice, congratulations on your 18%.

I've worked in any number of commercial engineering enviornments in
which *everything* which crossed the the shipping dock outbound to a
customer was the result of all-hands new product development
brainfarting sessions starting with a completely blank sheet of paper.
No innovation no checkee every time and there's nothing unusual about
any of it.

Since you brought it up let's cut the crap and do some meat &
potatoes. What's any of it have to do with diverting ARRL funds from
their spectrum defense fund into this nebulous "funding" of innovation
in *amateur* radio concept you've proposed? How, exactly, would that
work Hans?

Amateur Radio >>IS<< vital.

Numerous federal and civil disaster relief agencies have said so...in
public, in writing and in person.

Of course those agencies forgot to consult with Lennie the Licenseless
Loser before making those statements. Of course, if they had, they would have
only laughed themselves into a stroke at this allegedly "educated" idiot's
musings.

>> The ARRL propaganda is - consistently - the SAME. It also seems to be

Amateur Radio was recently front page news and opening line teasers on all
local TV outlets after an ARISS mission with a local school was completed.

Just to name a few...(and a few more reasons that prove what a lying idiot
Leonard H. Anderson is...)

Bah. Humbug.

A shrink is only good for people who know they have a problem and are proactively seeking help. Leonard is beyond the reach of modern psychiatry.

But it was a benevolent offer, Brian...I'll try to keep a more open mind as the holiday season draws near.

I've tried to influence other people's "quasi-religious belief system" WRT the Amateur Service Morse Code exams. It just can't be done. The best thing that can be done is to offer a different point of view for new (and hopefully younger) people forming their own opinions. The actuarial tables will take care of the rest of us.

With a revised definition of what ham radio is all about, and its
importance in today's world.

> To paraphrase Orwell, the FCC sees all license holders
> as equal, but some are more equal than others.....amateur radio
> apparently being on the 'less than equal' side of the
> equation......non-essential, per se.

I don't know about the Orwellian part ("Animal Farm" reference
well-done and duly noted) but it's hard to argue that all of amateur
radio is more important or even equal with, say, maritime or
aeronautical safety communications. What I see FCC saying is just that
those safety communications deserve the most protection.

Of course the idea that *any* licensed service does not have absolute
protection from interference caused by an unlicensed, incidental
radiator is the real problem. And it's not a "science" problem but a

"political" problem.

> >Most of what goes over the internet is "routine communications and hobby
> >activities" isn't it?
>
> ...which has what relevance to the topic of amateur radio and BPL?

BPL is being touted as something we *need*, for some reason or other.
Why do we *need* high speed internet via BPL at all? Why is such
access so needed that licensed radio services must tolerate
interference from BPL systems?

IOW, what will BPL do that is so much more important - more "vital" -
than ham radio and other licensed radio services?
>>

I'm following K0HB's "PBI" concept. Come up with ideas and see where
they lead.

> Go forward how, with what, to whom, and to what goals and
> objectives?

Publicity, for one. How we present ourselves to Congress, the FCC, and
our BPL opponents, for another.

I've seen plenty of "Sportsmen for Bush" and "Sportsmen for Kerry"
bumperstickers. By folks who hunt and fish for "a hobby".

> Or was that just a "one for the Gipper" thing that you
> thought sounded real cool?

Nope.
>
> The regulatory folks have made it pretty clear - do you have a plan to
> have them overruled somehow? By whom? - the decision on BPL is
> entirely within their sphere of control.

Congress is one avenue. Another is simply to make amateur radio more
visible and better understood.

> >And this goes beyond the BPL battle. Take CC&R struggles - would they try to
> >ban other "hobbies"?
>

> CC&Rs are outside the jurisdiction of the FCC, I believe.....

Exactly!

> >I like the term "antenna-hugger" myself.
>
> Great! Just wait until the FCC helps the ARRL complete the sequel to
> their most popular book (entitled "2 Meters And Down - Amateur Radio
> In The 21st Century"). The little antennas for our only remaining
> bands will be much easier to hug!

Actually, I see the VHF/UHF allocations as being much more threatened
by reallocation than HF.

> >---
> >
> >The phrase I object to is "*just* a hobby" - which denies the components of
> >public service, education, etc.
>
> Which, unfortunately, is what the FCC R&O quoted above boils down to -
> no special protection warranted, it's just a hobby activity.

Most amateur communications aren't emergency communications. Never
have been.

> The
> emergency communications aspect was dismissed pretty neatly in their
> statement.....the condescending "while we recognize..." line.

My point is simply that the FCC isn't buying the argument that we hams
need complete protection from BPL because we *sometimes* do emergency
communications. Neither do the CC&R folks. So we need a new tactic.
Like the "Sportsmen for X" folks. Part of which is a revised
definition that shows how unique and valuable a resource amateur radio
is - just like the park system.

Even though I'll probably never visit most of the nation's parks, they
are of value to me.

The brainwashing was way too sanitary, practically aeseptic.

Better than an autoclave session done many times.

>The
>best thing that can be done is to offer a different point of view for
>new (and hopefully younger) people forming their own opinions.

Not allowed by the Belief System.

All newcomers (no exceptions) MUST do it like the olde-tymers
did it. Morsemanship at the top of the list. Second, knowing
all the statements of the ARRL by heart, especially the one where
"ham radio would not have survived without the efforts of the ARRL."

Advancing the State of the Art is always around 30 years behind
the rest of the radio-electronics world, excused by "countless"
rationalizations, typically cheapness.

>The actuarial tables will take care of the rest of us.

PCTA extras never die. Neither do they fade away. :-)

Actuarial tables don't apply to them.

Isn't that impossible in the self-righteous glorification of amateur
radio?

You surely must have noted the insistence by so many hams that
the government-commercial infrastructure always fails in a disaster
or emergency yet hams and ham gear are always there to take
over and save the day.

>Of course the idea that *any* licensed service does not have absolute
>protection from interference caused by an unlicensed, incidental

It is ALL a "political problem." Politics DEFINES which radio
services are "licensed" or not. "Licensed" radio services did not
come about by Divine Intervention.

For one thing, it would open the doors to having more Chat Rooms
where hobbyist hams could sit around all day and high-five each
other that They were of vital need to the nation (because they are
officially licensed) because the ARRL told them they were.

>bumperstickers. By folks who hunt and fish for "a hobby".

Ham radio is not a sport. Ice hockey is a sport. Hunting and
fishing are loosely defined as "sport." Ham radio is a hobby.

>> have them overruled somehow? By whom? - the decision on BPL is
>> entirely within their sphere of control.
>
>Congress is one avenue. Another is simply to make amateur radio more
>visible and better understood.

...which means getting BEYOND the pages of ARRL publications
and into the mass media. Very puny efforts by the ARRL to make
any sort of mass media entry in the last half century or so.

Example: The mass media journalists duly reported many, many
groups out hunting for shuttle debris, lots of photographs shown of
people engaged (and some identified) in that plus shots of debris
itself in various places of the US of A. Where was it identified that
amateur radio groups were the "leaders" or even participants of
such activity? Answer: On the league website and in QST. Not
exactly mass media outlets.

More examples: Many disasters and emergencies have been
chronicled by the news media in the last half century, much film
and video footage, many many photos, hundreds of column-inches
of type composed about all that. Hardly any mention at all of ham
radio involvement and, if it were, confined to what has been termed
"health and welfare" messaging. Where has it been glowingly

reported as of vital interest? On the league website and in pages of QST. Again, NOT mass media.

Amateur radio publicity MUST go beyond the puny efforts of the league in getting out the message. The league has been ineffective using its old approach.

Cable TV has hundreds of channels covering an amazing assortment of activities. There are at least three programs on Arts and Crafts on the schedules (would have been a fourth but Aleene's went off). There are none about amateur radio. Has "Dateline" or "60 Minutes" done any reporting of amateur radio in their existance on network TV? Any of the news broadcasts? [answer: Hardly any if at all.]

Yet the league glowling reports (in remarkable vague implications) all the wonderful work done by amateurs and they Believe it all, hook line and sinker. You should realize that league self-glorification is what they do for a living...to convince all that they should be members and that they tell members and non-members what they psychologically want to hear. It ain't necessarily detailed truth, but mostly implied doing of good works.

>Actually, I see the VHF/UHF allocations as being much more threatened
>by reallocation than HF.

If you've been following all the agencies and organizations going after "bands" you should have said all that spectral territory ABOVE 1 GHz if where the activity is...UHF is essentially fixed as to occupiers now (except some rare instances of government frequencies being freed to allow allocation by the FCC). The radio world is concerned with HF primarily to keep what it has...few are trying to get any part of it.

>> Which, unfortunately, is what the FCC R&O quoted above boils down to -
>> no special protection warranted, it's just a hobby activity.
>
>*Most* amateur communications aren't emergency communications. Never
>have been.

"Never have been" what? Finish the sentence.

>> The
>> emergency communications aspect was dismissed pretty neatly in their
>> statement.....the condescending "while we recognize..." line.
>
>My point is simply that the FCC isn't buying the argument that we hams
>need complete protection from BPL because we *sometimes* do emergency
>communications. Neither do the CC&R folks. So we need a new tactic.

Realization! Amazing! A new dawning! :-)

>Like the "Sportsmen for X" folks. Part of which is a revised
>definition that shows how unique and valuable a resource amateur radio
>is - just like the park system.

Amateur radio is NOT "just like the park system." Never was.

USE of an analogue in POLITICAL divvying-up of resources does
NOT mean "just like it." It is just politics. You have to go after it
in a political manner...and NOT confine all efforts within the limits
of a single membership organization that hasn't gotten much
mass media exposure in the last half century.

>Even though I'll probably never visit most of the nation's parks, they
>are of value to me.

You should get out more. :-)

[try a "Lifetime Membership Pass" from the National Park Service]

But...none of the Parks I know about have anyone extoling the
"unique and valuable resources" of ham radio or morse code, so
I doubt you will ever bother with one of those. :-)

>Correct. Calling it Just a hobby is like calling Nascar racing "just a
>bunch of people in cars. Self illuminated ignorance.

Tsk, tsk. Calling a PROFESSIONAL SPORT like NASCAR a
"hobby" is like saying the Toronto Mapel Leafs are "just a bunch
of skaters playing on ice." Does ham radio go on strike? :-)
[I could say "puck you" but that would elicit terrible gasps from
the rever-end and the prussian schoolmaster...:-)]

NASCAR vehicles go faster on land than a certain CAP ace does
in his lil two-seater (as "pilot in command") in the air.

So...ham radio is a noble service to the people NOT IN ham radio?
It is of vital need of the nation? It "educates" the masses on the
theory and techniques of radio? Ham radio survives all disasters
when all the infrastructure (commercial, professional built) "fails?"

Go for it. Fantasyland is without limits.

NOT near enough to qualify for the self-glorifying political definitions
in Part 97...and certainly not from the implied greatness and nobility
written up by the league.

>> Three earthquakes, not just one. :-)
>
>But it is a matter of public record that radio amateurs participated.
>Names and calls have been published. How do you account for that?

ARRL does the "publishing." Mass media it is NOT.

Wire services have "published" all that? I think NOT. Broadcast
TV news "published" all that? I think NOT.

Being "published" in the weekly Podunk Hollow 6-pager might
satisfy legal necessities of "publishing" but the citizenry still
doesn't know about amateur radio in detail.

>> Tsk. I was out there, not just "watching TV." Didn't see any "ham
>> emergency" crews at the disaster centers. Maybe they were all
>> home using CW on their rigs? ["CW gets through when nothing else

>
>To make this clear for us, you were actually at the involved disaster
>centers, Len? All of 'em? So you know for a fact that no radio
>amateurs were involved in these earthquakes?

I've been to more of them than you. :-)

Do I know "for a fact" there were no amateurs involved? No, because
I don't read QST to find out. I was THERE. Nobody wearing a ham
HT on their belt, nobody with a little callsign pin on, no mobiles
parked. Just the regular emergency workers plus the FEMA fly-away
terminal showing TV with notes posted from anxious relatives.

>I've seen no government nor NASA reports stating, "No radio amateurs
>were involved".

I've seen no government nor NASA reports stating, "Radio amateurs
were involved." If you've seen such a statement, provide the source
so that Newington can be better educated.

>There are plenty of good citizens. Not all of them are equipped to to
>what radio amateurs did in this case. Why the dodge?

"Dodge?" No Dodge, dude. Wife and I drive our Chevrolet.

Gosh, "Dave," I've seen no government nor NASA reports that
ONLY hams are "good citizens" or that they were "the only ones
equipped (with ham radio) to do the shuttle debris searching!

Was that in some sensitive (secret) government report that ONLY
ex-State people were cleared to read?

>> >> Pretending that amateur radio is "vital" is a lot of POLITICAL

>> old things as some kind of "truth" of "new things?"
>
>Keep tap dancing, Len.

Tsk. Got rid of my Haney Plates years ago.

"Dave," you are still behaving as the prussian schoolmaster wanting
to humiliate his "students.' You are neither schoolmaster nor
"expert" but your attitude is superbly prussian. [but with a lower
case undeserving of capitalization]

>> That's NOT "weaseling out." That's just plain nuts, morseman.
>
>You just can't bring yourself to admit that the idea belonged to
>another, can you?

I have plenty of analogues and admire those who are original, such
as the comparison of the park system to setting aside spectrum
for hobbyist activities.

YOU continually overlook the subject (the analogue) in a poor
effort to attempt humiliation and defamation of a single poster as
"your argument." That is faulty...but you seem to think you have
NO faults.

>The volume of your material in an attempted defense of the indefensible,
>says otherwise. You care.

Tsk. I can't possibly "care." You said (repeatedly) I am "not involved."

>That's quite a rant, Leonard. There's a running QST item most months
>which is called "Media Hits". What kind of items do you think it
>highlights?

Some squib in the Podunk Valley Hollow weekly 6-pager?
A Mike Douglas TV show item? :-)

Sorry, but the ARRL has been ineffective on getting mass media
exposure to amateur radio for years...a whole half-century worth.

The best it can hope for in "media hits" is to have CQ quote from the league website on something. All that stays INSIDE the ham media, doesn't venture OUTSIDE to where the politicians and the rest of the citizenry see news and events.

Some hams, like yourself, want to stay insular to keep your brainwashing clean and intact with old ideas. That way you can freely fantasize on how "vital, unique, and resourceful" you all are (along with pipe dreams of heroism, saving the day, etc.) in some weird rationalization of "justifying" your hobby. You DO do that and get very angry when you don't get high-fives for your fantasyworld accomplishments. Your worry, not mine. "I'm not involved." :-)

>> aren't required to license themselves in the amateur radio service!
>
>You'd better go look at that picture, Len. I wrote that the FCC IS
>involved.

They can't be. None of them are required to have ham licenses.

>You cannot at this time, do as I did.

Nobody can. You broke the mould.

>You could have earlier but you didn't.

I "should" have? Why?

>You could have met the current requirements for amateur radio
>licensing but you didn't.

I "should have?" Why?

Tsk. You would not accept that, either. :-)

>You don't have quite enough interest to
>actually get off your duff and take an exam for any class license.

Right you are. Been a licensed professional too long. My bad.

>You are not involved.

Right you are. I'm just a citizen of the USA, still active in
electronics engineering design, and think ALL of radio-electronics
is most interesting. I'm a professional and am very involved in
that...as well as being a citizen of the USA.

The one thing about radio that is not interesting is the group of
self-righteous oafs who think they are some kind of radio gods
and try (but fail) to put down those who don't honor and respect
them for their mighty macho morsemanship. Those have amateur
radio licenses and all seem to be PCTAs...as well as having way
overblown egos thinking they are "superior" to those not thinking
as they do.

Tsk. That sort of PCTA extra behavior is condoned and even
encouraged in here.

All the PCTA extras can do is to turn on their insult machines and
fabricate all sorts of LYING comments about spouses and family
members.

The PCTA extra have lost the ability to boost their morsemanship
in open discussion and can only insult those who do not love
morsemanship. Doesn't lend much credence to the FCC definition
of "international good will" by amateurs, does it?

Heh heh. My wife would never be that hard-up so as to "inform"
the "pilot in command" of any private thoughts...about anything.

Let the CAP ace live in his Brittney Spears daydreams. That's
about all he has left now...

Not really. I'd rather not be a part of Steve's lunacy.

> Ho hum and a hi hi.
>
> LenAnderson@ieee.org

Robeson talks the big talk. Now he claims to have me filtered but
will "See me at Dayton, ~penis~." Hi, hi!

Welp, I'm usually working or have Scouts going on that weekend.
Priorities, you know. At least when it was in April I had fewer
conflicts.

Wasn't he going to "see me at Dayton" last year but didn't even go?
More big talk and just as well. Kicking a 100% disabled Vet's ass is
pretty low on my priority list and I'd rather buy him a beer and a
prozac so he could feel better about himself.

By the way, Len, Dave, Hans, and Steve, and even Mark Morgan, tomorrow
is Vet's Day and I'd like to thank each of your for your service to
our country. That is "Service" as in military service, not service as

in amateur service or joining in a morse code net to play radio hero, or going to engineering school and selling stuff to the government. Service as in putting your country first, your family second, and yourself last. Thank you.

If there are other veterans on RRAP that I have missed, just sound off.

bb

Not even close. The owners say they are losing less money the way things are now. I believe them.

DOn't know if you watch hockey or follow it at all, but with the advent of widespread use of the neutral zone trap defense, coupled with the referees tolerating large scale clutching and grabbing, the NHL game has become more boring than soccer. Almost completely defense, and the only scoring comes from mistakes.

Here is some hockey trivia. Last season, one of the Stanley cup final games was outdrawn by an episode of Spongebob Squarepants, the bizzarre cartoon. The NHL game is so boring that they have to change it, or they might as well close shop. NO one is watching.

Umm, I wasn't calling it a hobby. The comparison was about mistaken assumptions. Hams do approach the ARS as a hobby. NASCAR is a bunch of people in cars. But they are both a lot more.

Does ham radio go on strike? :-)

I always love watching you trying to tap dance your way out of an error.
You have many errors and you spend a lot of time tap dancing.

See ya, "Atila".

How?

Their main game was how we supposedly all need broadband interent access so
much that polluting the spectrum is the only way to get it. As if DSL, cable
and other methods won't reach enough people soon enough.

No, it's not. Just because amateur radio isn't part of every emergency and
public service operation doesn't mean there's no contribution.

The exception that proves the rule. As I wrote: "All but gone". There are still some specialized uses. IIRC, the USN and USCG each have at least one sailing ship still on their rosters.

Which has no bearing on what recreational boaters do.

UPRR has two steam locomotives in operational condition, too - they even fire 'em up every year or two.

>> and from the world's navies as

Actually, in the theater which is life, this is a stage and everyone who
reads one of your posts is an audience. Sometimes the audience
applaudes.
Sometimes it throws tomatoes. Your latest attempts at claiming the idea
of another as your own leave you covered in tomato sauce.

> >You can't admit that a number of hams are involved in the public service
> >aspects of amateur radio?
>
> NOT near enough to qualify for the self-glorifying political definitions
> in Part 97...and certainly not from the implied greatness and nobility
> written up by the league.

Piffle! Any implied greatness and nobility comes from your "little man"
inferiority complex. Part 97 says what it says. Feel free to take that
issue directly to the FCC. I'm sure they'll accept your input, even if
they don't act on it. The fact is, you just don't know much about it,
do you?

> >> Three earthquakes, not just one. :-)
> >
> >But it is a matter of public record that radio amateurs participated.
> >Names and calls have been published. How do you account for that?
>
> ARRL does the "publishing." Mass media it is NOT.

I didn't write anything about the League being mass media, though by
definition, QST fits the definition. It is read by a couple of hundred
thousand people. There are city newspapers with a smaller circulation.

There are articles in newspapers and magazines about the public service
aspect of amateur radio. We have two local stations in this area. One
or both generally have a feature story at least once yearly in their
newscasts about radio amateurs in Field Day or radio amateurs in flood
work or radio amateurs assisting in a search for a missing person.

> Wire services have "published" all that? I think NOT. Broadcast
> TV news "published" all that? I think NOT.

You might think, but you don't know.

> Being "published" in the weekly Podunk Hollow 6-pager might
> satisfy legal necessities of "publishing" but the citizenry still
> doesn't know about amateur radio in detail.

So having something published in a smaller newspaper doesn't meet your
personal definition. Boy, life's tough, isn't it?

> >> Tsk. I was out there, not just "watching TV." Didn't see any "ham
> >> emergency" crews at the disaster centers. Maybe they were all

"dodge".

> Gosh, "Dave," I've seen no government nor NASA reports that
> ONLY hams are "good citizens" or that they were "the only ones
> equipped (with ham radio) to do the shuttle debris searching!

Gee-willikers, Len, I wrote nothing about hams being the ONLY good
citizens. I can say with a degree of confidence that hams were the only
ones equipped (with ham radio).

> Was that in some sensitive (secret) government report that ONLY
> ex-State people were cleared to read?

Was what?

> >> >> Pretending that amateur radio is "vital" is a lot of POLITICAL

Yes, you admired the individual with the original idea so much that you
decided to claim it as your own.

> YOU continually overlook the subject (the analogue) in a poor
> effort to attempt humiliation and defamation of a single poster as
> "your argument." That is faulty...but you seem to think you have
> NO faults.

It is really difficult to stay on the subject, regardless of what it
might be, for your fairly frequent errors and the inevitable newsgroup
drift.

> >The volume of your material in an attempted defense of the indefensible,
> >says otherwise. You care.
>
> Tsk. I can't possibly "care."

Yes, you care that you've been discovered claiming credit for taking the
ideas of another and claiming them for your own.

> You said (repeatedly) I am "not involved."

I've said all along that you aren't involved in amateur radio. You're
certainly involved in a falsehood though.

> >That's quite a rant, Leonard. There's a running QST item most months
> >which is called "Media Hits". What kind of items do you think it
> >highlights?
>
> Some squib in the Podunk Valley Hollow weekly 6-pager?
> A Mike Douglas TV show item? :-)

Mike Douglas? Gee, you know as much about television as you do of Paul
Newman movies. :-)

> Sorry, but the ARRL has been ineffective on getting mass media
> exposure to amateur radio for years...a whole half-century worth.
> The best it can hope for in "media hits" is to have CQ quote from
> the league website on something. All that stays INSIDE the ham

1854. Happy Veteran's Day

Newsgroup: rec.radio.amateur.policy
Date: 2004-11-11 09:33:00 UTC
From: k4yz@aol.com
Message-ID: <20041111043300.21510.00000438@mb-m11.aol.com>
Source record: 99897

Once again we are at war. An entirely new generation of Combat Veterans has been cultivated, and surely some hope this will be the war to end wars. It won't be, but we will endeavour to bring freedom and liberty to an ancient culture that had not know true freedom in over seven decades.

The American Veteran is among the most unselfish and generous in the world. S/he has fought for those basic prinicples in countless foreign lands for people they may have never known existed until then, but did so with bravery, ferocity and professionalism. Their kind has never been seen on the Earth before, and may never be known again in the history of Man.

To >>ALL<< of my Borthers and Sisters in Arms, I bid you peace and offer my thanks for your service. For those who are still at war, I pray for your safe return and the wellnes of your families.

Paratus et Vigilans

>
>That's wrong (again), Leonard. He is saying that Soviet "Bear" bombers
>could not have been a threat to you during your military service in
>Japan, despite what you indicated here.

Here's exactly what Len wrote about "Bear" bombers:

> From: Len Over 21 (lenover21@aol.com)
> Subject: Re: 34 Years Ago Today
> Newsgroups: rec.radio.amateur.policy
> Date: 2002-12-08 21:01:08 PST
>
> "The distance between Chongjin, North Korea and Tokyo (where

> I was assigned) is about 500 air miles. The distance between
> Vladivostok, USSR, was about the same distance. That's about
> an hour's flight in a Bear (NATO name for a Soviet bomber). Less
> time of flight now with jet turbine aircraft."

Note that Len doesn't actually say there were any Bear bombers in Vladivostok or Chongjin at the time, or that he ever saw any, etc. But the implication that he was in some sort of imminent danger from them is clear.

Here's what I wrote in response:

>I think you missed some relevant points, Dave. Len's reference to the
>"Bear" bomber might lead the unsuspecting to think he was in some sort
>of danger from them while in Japan. However:

>- The airline distance from Chongjin, North Korea to Tokyo is at least
670 statute miles. The distance from Vladivostok to Tokyo is 663 statute
miles. (Source: "Esso War Map III, Featuring The Pacific Theater",
printed 1944).

>- For interesting info on the Tupolev TU-95, and its variants, known
> to NATO as the "Bear", see:

> http://www.fas.org/nuke/guide/russia/bomber/tu-95.htm

> which tells us that:

>- Development of the TU-95/"Bear" began in June, 1951.

>- First flight of the first prototype, November, 1952.

>- Production began January, 1956.

>- First deployment August, 1957.

>- Four turboprop engines driving counterrotating propellers.
> "Turboprop" refers to jet turbine engines driving propellers.

>- Len left Japan before any TU-95s were deployed.

Therefore, they were no threat at all to him when he was in Japan. Also, the distances and flight times were greater than he stated.

>As with your well known
>"Sphincter Post", it leads some of us to question your character.

It just leads me to question Len's grasp of objective reality.

What's curious about the Sphincter Post is that it's a direct insult to the military service of a member of the Coast Guard, who served as a radioman in Hawaii and who described some experiences while serving. Yet Len was never in the Coast Guard and never did the kind of radio operating he criticizes.

More telling, however, is Len's classic "Feldwebel Post" in which he told you (Dave) to "shut the hell up, you little USMC feldwebel".

In just one short sentence, Len manages to violate Godwin's Law, insult a branch of the US military, attempt to deny someone their First Amendment rights, uses a mild profanity, tries to act as the moderator of an unmoderated newsgroup, and arguably makes an ethnic slur in the mix.

As we often say where I work:

"Everybody's good at *something*.

>> >The bile on rrap comes from the three-way Steve/Len/Wiliam whizzing
>> >contest. You all must get something from it, because you sure put a
>> >lot of effort into it.
>>
>> Tsk. Rev. Jim is readying another Sermon on the Antenna Mount?
>
>Jim states a fact. Don't you have an acceptable response?

Acceptable to whom? Len sees nothing unacceptable in his behavior, but finds the behavior of certain others to be unacceptable to him. In the above example, it is perfectly acceptable (to Len) for him to imply that he was in constant, imminent danger from TU-95s while he was in Japan, but completely unacceptable for me to point out that there were no TU-95s deployed anywhere until after he left.

>> Rev. Jim "puts a lot of effort" into making SURE that all those
>> he thinks need "corrections" get those "corrections!" QED.

Takes very little effort on my part. Len makes so many mistakes here that I don't try to correct all of them.

>What has that to do with your whizzing contest?

Nothing.
>
>> >btw, Len, a little googling turned up the fun fact that Steve began
>> >calling you a putz back on August 6, 1999 - if not earlier. Of course
>> >you had previously made a habit of calling him "nursie" and other
>> >names, and referring to him by the wrong gender.
>>
>> Tsk. You are still being Judge and Jury via Google, aintfcha?
>>
>> :-)
>
>Jim is? Not at all, Leonard. Your archived words and the dates on
>which you posted them are archived. It is proof of your actions. In
>this case, things didn't happen the way you claim they did.
>
>> When Rev. Jim runs out of arguments in the present, he MUST
>> resort to Googling to "prove" something.

Len constantly rehashes the past, then is angered by and abusive of those who present conflicting information disproving his assertions.

Most importantly, Len cannot seem to get Steve to stop calling him a putz.
>
>...and it looks like the Google archives of newsgroup posts did just
>that. The archive seems to prove that version of events is not correct.

Which is why Len switches to name-calling and excessive emoticons. He's been
shown to be mistaken, which is simply unacceptable.

>> Jimmie thinks he can "win" some past arguments by repeating and
>> rehashing OLD ones?

The facts speak for themselves.
>
>When you start the "Jimmie" stuff, it is obvious that he has zapped you
>good. You made a recent statement and issued it as a factual account of
>something which took place. The trouble is, the Google archives say
>otherwise.

The amusing part is that Len talks about "the past" more than anyone else here,
then gets angry when his version of events is shown to be somewhat unreliable
or incomplete (to put it mildly).
>
>> Of course...if for no other reason that Jimmie
>> Must Be Right in his own mind. Subject itself be damned, concentrate
>> on defaming the opponent in order to "win." Tsk.

Posting of facts is "defaming the opponent"?

>Diversion on your part. If you didn't want to be batted around on this
>issue, you could have refrained from, "Well, HE started it".
>
>> >Perhaps you need to try some new techniques if you want him to stop.
>>

>You don't want anyone else doing what you do.
>
Let's remember that phrase, shall we?

"who can't argue a subject for squat and does the personal insult thing in
order to "win an argument." "

That's pretty much a fair description of what Len does here.

The rest of your post aside, Steve, can't help but make the observation that all that can possibly be accomplished in this situation (Iraq) is a propped up (at best) democracy that resembles nothing akin to a real and true democracy. We don't even have a real and true democracy here in the US any more; how can we accomplish it elsewhere?

The Middle East is not ours to win--it was never ours to change.

Kim

Nah!!! It seems many have decided to talk over his
daily "ego-casts" on 3.975, 14.275 and 3.890 AM
like sooooooooo many hams have been doing this
past week. (be sure to listen during the 5 second pause
when he gives his "10 minute ID". The comments tossed
out 'in-the-clear' at that time are often quite humorous!!
One guy on 75 has taken to playing a clip of Moe from
The Three Stooges' classic clip: "...Quiet Numbskulls
I'm Broadcasting!!" at this point. (the first time I heard
that I actually *blew a whole mouthfull* of Pepsi-cola thru
and out my nose, it was THAT FUNNY !!!!!!!!)

baaaahahahahah!!

Funny you should ask!

I have started to put together a "Near Space Science" group. I made initial calls for interest a few months ago, and made my pitch at our club meeting this week.

The response was excellent, both at the meeting and afterward in private. At the moment it looks like we are going to make this happen.

The likely scenario is that we will be working with local schools and other interested parties as well as among fellow Hams to launch experiments - both ARS and Educational - to the shores of space at around 100,000 feet above the earth, and then return them safely.

This is a ripe field for experimentation and innovation. There are groups that are already doing this, and I see many innovations to be made, and improvements in technique that may be possible.

The efforts are a public relations windfall if they are done correctly. It is a great way to get our name out in the community, both locally and nationally.

This can all be accomplished for a surprisingly low cost. It is also a cross-interest project where people of many different interests and disciplines can contribute. It isn't just Hams.

Outside of a gvt/university environment, Ham radio is the most practical way to go. We have licenses, methods, and applicable frequencies to use.

Don't know if any of you folks in the PA and local area are interested in getting involved, but if so, we can discuss it here or by private email.

So there you are Jim. A way to innovate, experiment, and have fun at the same time. Also a great P.R. effort that gets our message out to the public in a way that they can understand as a "hi-tech" endeavor.

What does the Nazi party signify to K1MAN?

Do remember the Nazis?

Do you believe there was a holocaust?

Why did you refer to Fred Lloyd as a Nazi?

Why did you refer to people who
complain about your broadcast as
Nazis?

Why do you trivialize Nazism and the Holocaust?

Are you sensitive to the victims
of the holocaust?

Why did you harass Len Schaier on your show?

Why do you send harassing email?

Have you ever sent harassing email
to a Jew?

Have you ever sent harassing email
to a Black person?

What was the Nazi view on African Americans?

Is the Nazi view on Africans a
view your co-host
Rich Whiten shares?

Do you hate Jews?

Have you ever attended a KKK rally?

Has your co-host ever attended a KKK rally?

Will you answer questions
regarding allegations of your KKK
involvement?

Are you afraid the Nazi party
will take offense at your
trivializing their party?

Rich Whiten acknowledges he called someone a Nigger.

Why do you call Rich a friend?

Are you proud to have a racist friend?

Do you believe your co-host was
wrong to call someone a Nigger?

Do you believe your co-host
was wrong to call someone a Spear-Chucker?

Are you a racist too?

Your co-host said African Women
can be stood on their heads to
scrub pots because their hair is
like a brillo pad.

Do you believe this too?

Are IARN and AARA racist orgs?

Do you share your co-hosts view that Blacks should go back to Africa?

Your co-host referred to Black people
as porch monkeys -

Do you agree?

Do you share your co-hosts view that African Americans are here for a free
lunch?

Will you answer questions about your co-hosts racism?

Are you afraid the NAACP will ask the FCC to revoke your license?

Why did you jam the Boy Scouts?

Why do you ignore what the Chief FCC Enforcement officer says about the
rules?

Who are the control operators
at K1MAN?

Where was the control op on when you jammed the Boy Scouts?

Why didnt you stop the broadcast when you found out you were jamming boy
scouts?

Do you plan to continue to interfere with other hams?

Who is on your law team specifically?

Why does Walter Cronkite think you
are a source of harm and damage to his
reputation?

How many people died because
you shipped communications equipment

to Bougainville?

Why do you think almost 1000 people on QRZ think you are a detriment to the hobby?

Why did you lose your lawsuit against K1KW?

Do you carry a gun?

Does Chris Murdock carry a gun?

Are you afraid peope will attack
you if they see you in public?

Is it true you were beaten up in high school?

Is it true Chris Murdock was beaten up in high school?

Is it true Sam Voron was beaten up in high school?

Have you ever sat in on a so-called "circle jerk?"

Will you try to sue ARRL or
is this more K1MAN propaganda?

Will you try to sue Riley
Hollingsworth?

How many lawsuits have you lost, all told?

Do you believe you ruined the AMers chances of power parity with your failed law suit?

Do you think most AMers despise you?

Why do you monopolize the AM window?

Do you run more than 375 watts
from your Collins AM transmitter?

Why do you interfere with hams on a daily basis?

Why do you think so many people hate K1MANs broadcast?

People say you are
mentally unbalanced are you?

Have you received
Psychiatric treatment?

Why not?

What medications do you take
for your Psychiatric problems?

Why do you avoid giving straight
answers about your Psychiatric

problems?

Are you or have you ever been a homosexual?

Are you or have you ever been a Communist?

Why did you assist the
Young Communists?

Did you ever jam any
Young communists?

Is Sam Voron a Communist?

Why dont you answer
questions about your alleged Communist sympathies?

Are you and Sam Voron lovers?

Are you and Chris Murdock lovers?

Is Sam Voron both a Communist and a homosexual?

Why wont you answer questions about your alleged homosexuality?

Have you ever used Viagara?

Have you and Chris Murdock ever used Vagara together?

When you make your "brief statements"
who is interviewing you exactly?

What method of control is used at
the transmitter point other than
a radio shack timer.

If you are not near the radio when broadcasting, how is it controlled?

How much emergency traffic did
K1MAN handle this hurricane season?

Who sent you this traffic?

Will you publish your emergency
traffic?

How many health and welfare
messages have you passed?

Will you publish the health and
welfare messages?

Why did you qrm the Salvation Army
net?

Why did you qrm the UFO net?

Are you an alien?

Why wont you answer allegations
that you may be an alien?

Is Chris Murdock and alien?

Is Chris Murdock a homosexual
communist alien?

Why wont you answer allegations
that you are a homosexual communist alien who jams boy scouts?

What is your favorite activity
when you invite Boy Scouts to your shack?

Have you ever invited Webelos to
your shack?

Why havent you invited girl scouts
to your shack?

Do you enjoy eating Brownies?

Can you tell us about the nature
of your packet messages?

Isnt it true the majority of your packet messages ridicule K1MAN?

Why do you feel you need to monopolize 14.275?

Do you believe 14.275 is your
frequency?

Do you hate Riley Hollingsworth?

Why do you hold Amateur rules in contempt?

Transcript of racist tape in question:

"Now theres a nigger if there ever
was one. Take your black ass and
go back to Africa. You better take another hit on that crack pipe,
boy. Lawd have mercy, I cant
believe these black people in here.
Ah hell, black woman got all that
black bushy hair, looks like a brillo
pad, turn her upside down and use her head to scrub your pots. This
damn porch monkey spear chucking
bubbas talking about good white
folks."

(unknown voice telling
Rich that he was recorded by the
amateur enforcement line)

"Good Im glad, you can take that
enforcement line and stick it clear up your ass, I dont like niggers,
N1GJT de WB2OTK. You know Jigaboo is worried about what goes on here."

Please answer the questions K1MAN.
The public has a right to know.

1866. FCC resumes issuing calls.

Newsgroup: rec.radio.amateur.policy
Date: 2004-11-11 20:29:32 UTC
From: Splinter <splinter48708@sbcglobal.com.nospam>
Message-ID: <hmi7p0dbner4dh3heq4mqa27hfddpr5uc0@4ax.com>
Source record: 99808

Good news, bad news.
First the good news: The FCC has corrected the problems with
the ULS and resumed the issuing of ham tickets.
The bad news. All calls issued when the system was messed up
were set aside and news calls issued.

The FCC is back in the business of issuing Amateur Service license grants after a shutdown of several days. The Commission's Wireless Telecommunications Bureau (WTB) last week halted processing of Amateur Service applications after a Universal Licensing System (ULS) computer programming problem caused application grants to go awry. Besides creating an application backlog, the glitch resulted in the issuance of nearly 130 out-of-sequence Group D (2x3) amateur call signs. Those erroneous grants now have been set aside, and licensees have been issued new, in-sequence call signs.

"The Commission appears to have corrected the earlier erroneous call sign assignments," reports ARRL Volunteer Examiner Coordinator Manager Bart Jahnke, W9JJ, who's been closely monitoring the situation. "In the past 24 hours, the FCC has issued 1915 Amateur Service grants, some of which were corrections for the earlier call sign anomalies." Jahnke says the rest of the grants represented the application backlog and an initial run of some 600 applications for license renewal, license modification, vanity call signs and administrative updates the WTB ran November 10 to check out the system.

WTB personnel auditing the results of that initial run apparently were satisfied that the trouble wouldn't resurface and removed an "alert" posted on the ULS Web site five days earlier to announce the suspension of Amateur Service grants. The FCC is closed for Veterans' Day, November 11--a federal holiday--and no additional applications will be processed until November 12.

Jahnke says that each of the 130 or so licensees issued out-of-sequence call signs will get a set-aside letter from the FCC via Certified Mail, pointing out the assignment error and listing the corrected call sign. The problem seems to have affected only new 2x3 call sign grants.

The 130 affected licensees can learn their new call signs by searching the ULS database by licensee name or by FCC Registration Number (FRN), if they know it. Web call sign servers may not yet reflect the newest ULS call sign grants. Records of the erroneous call sign grants will be maintained in the ULS archive.

The difficulties began in late October, when a ULS software change shunted all amateur applications from the nation's VECs into "Pending 2" status and flagged them for manual review without any justification. Attempts to correct the error only seemed to make things worse, however.

After regrouping, the WTB thought it had things under control by November 2, and it reprocessed all the applications in the queue. That time, the system not only failed to grant some routine requests for new sequential call signs but erroneously began issuing out-of-sequence Group D call signs from brand-new call sign blocks in several districts. At that point, the WTB stopped amateur processing altogether.

While the first and third call districts were unaffected, the system jumped from issuing call signs in the KC2Nxx sequence to the WQ2Axx sequence, Jahnke said. It also had assigned WQ4xxx, WQ5xxx, WQ7xxx and WQ9xxx call signs. In the eighth district, there was a gap between KD8xxx to KM8xxx call signs, while in the tenth district the Commission went from KC0Txx to WI0Axx. In the sixth district, the sequence shifted from KG6Wxx to KI6Axx.

Despite the processing error, Jahnke emphasized, the anomalous Group D call sign grants were legal to use on the air.

What gets me is that a previous poster was right: Why couldn't the FCC just leave the otherwise legal calls alone. They weren't harming anything and is a waste of taxpayer dollars. I really don't think Riley would have cared one bit anyway, as the issued calls were otherwise legal. Dumkoffs!

N2EY@AOL.COM (N2EY) wrote

> 73 es tnx to all veterans de Jim, N2EY

I am the American Sailor
Author unknown

Hear my voice, America! Though I speak through the mist of 200 years, my shout for freedom will echo through liberty's halls for many centuries to come. Hear me speak, for my words are of truth and justice, and the rights of man. For those ideals I have spilled my blood upon the world's troubled waters. Listen well, for my time is eternal - yours is but a moment.

I am the spirit of heroes past and future. I am the American Sailor. I was born upon the icy shores at Plymouth, rocked upon the waves of the Atlantic, and nursed in the wilderness of Virginia. I cut my teeth on New England codfish, and I was clothed in southern cotton. I built muscle at the halyards of New Bedford whalers, and I gained my sea legs high atop mizzen of Yankee clipper ships.

Yes, I am the American Sailor, one of the greatest seamen the world has ever known. The sea is my home and my words are tempered by the sound of paddle wheels on the Mississippi and the song of whales off Greenland's barren shore. My eyes have grown dim from the glare of sunshine on blue water, and my heart is full of star-strewn nights under the Southern Cross.

My hands are raw from winter storms while sailing down round the Horn, and they are blistered from the heat of cannon broadside while defending our nation. I am the American Sailor, and I have seen the sunset of a thousand distant, lonely lands. I am the American Sailor. It was I who stood tall beside John Paul Jones as he shouted, "I have not yet begun to fight!" I fought upon the Lake Erie with Perry, and I rode with Stephen Decatur into Tripoli harbor to burn Philadelphia.

I met Guerriere aboard Constitution, and I was lashed to the mast with Admiral Farragut at Mobile Bay. I have heard the clang of Confederate shot against the sides of Monitor. I have suffered the cold with Peary at the North Pole, and I responded when Dewey said, "You may fire when ready Gridley," at Manila Bay. It was I who transported supplies through submarine infested waters when our soldier's were called "over there." I was there as Admiral Byrd crossed the South Pole. It was I who went down with the Arizona at Pearl Harbor, who supported our troops at Inchon, and patrolled dark deadly waters of the Mekong Delta.

I am the American Sailor and I wear many faces. I am a pilot soaring across God's blue canopy and I am a Seabee atop a dusty bulldozer in the South Pacific. I am a corpsman nursing the wounded in the jungle, and I am a torpedoman in the Nautilus deep beneath the North Pole. I am hard and I am strong.

But it was my eyes that filled with tears when my brother went down with the Thresher, and it was my heart that rejoiced when Commander Shepherd rocketed into orbit above the earth. It was I who languished in a Viet Cong prison camp, and it was I who walked upon the moon. It was I who saved the Stark and the Samuel B. Roberts in the mine infested waters of the Persian Gulf. It was I who pulled my brothers from the smoke filled compartments of the Bonefish and wept when my shipmates died on the Iowa and White Plains and Cole. When called again, I was there, on the tip of the spear for Operations Desert Shield and Desert Storm.

I am the American Sailor. I am woman, I am man, I am white and black, yellow, red and brown. I am Jew, Muslim, Christian and Buddhist. I am Irish, Filipino, African, French, Chinese, and Indian. And my standard is the outstretched hand of Liberty. Today, I serve around the world, on land, in air, on and under the sea. I serve proudly, at peace once again, but with the fervent prayer that I need not be called again.

Tell your children of me. Tell them of my sacrifice, and how my spirit soars above their country. I have spread the mantle of my nation over the ocean and I will guard her forever. I am her heritage and yours.

Since we're being informal, Leonard. I'll place one word of a sentence
here and there thoroughout my post. You find them, put them all
together and make a sentence. Then you can try do decide where in the
post they belong. Here's your first word: No

> Aren't you NOBILITY or something?

We have no nobility, much less NOBILITY in the United States.

> A divine messenger?

Well, I have been told that I'm cute. man

We all? You speak for an "all"? I've never made any statement
indicating that I believed that the Department of State in unrelated to
the administration. I did inform you that, in direct refutation of your
absurd claim, the Department of State does not depend upon the U.S. Army
for communications personnel, facilities or means.

> >your ignorance is your responsibility.
>
> "Dave" told it like "Dave" thinks it is...and must take full responsibility

> for his own ignorance.

There you go again, Len. No matter what work anyone has performed, you always claim to know more about it than he. It matters not whether the work was in the military, in other government service or in private enterprise. It is similar to what you attempt with licensed radio amateurs. You've never been a ham but you know better how amateur radio should be regulated. The term which describes one like you is "sidewalk superintendent". You know far better than any construction worker, how a building should be erected. The only problem is, you've never put up a building. You can describe the heat of battle, but you've never been in battle. You know all about how the Department of State handles its communications, but you've never been employed by the Department of State.

example.

> >> >> The "hotline' (continuous TTY circuit, Washington to Moscow)

Carry on then. You won't have to worry yourself over what mere amateur
are doing.

> The one thing about radio that is not interesting is the group of
> self-righteous oafs who think they are some kind of radio gods
> and try (but fail) to put down those who don't honor and respect

> them for their mighty macho morsemanship.

For a guy who find such things uninteresting, you spend a significant amount of your time addressing and responding to those you abhor. You might have a few things mixed up. Fact is, radio amateurs aren't going to be swept off their feet by your professional standing. Many of us have also worked in radio and electronics professionally. If you want in, you'll have to pass an exam. If you want HF access in amateur radio, better pass that tricky 5 wpm code exam. If you want respect, keep your transmissions short and keep the gain on your receiver on. Otherwise, nobody except other rank newbies will want to talk to you--until they wise up.

> Those have amateur
> radio licenses and all seem to be PCTAs...as well as having way
> overblown egos thinking they are "superior" to those not thinking
> as they do.

I don't like your ego, Len. As far as amateur radio, I'm superior to you.
I'm in. You're out.

Should you ever become licensed, you'll be a neophyte at amateur radio.

Dave K8MN

Yes, but I thought I said that? "have a real and true democracy here in the US any more..." Why do I say that? Because we have a government whose actions are pretty much dictated to by special interest groups, major corporations, foreign interests in this country, etc. "We the People" just get to elect who it is that will be listening to them and acting upon their desires this time around.

We have a system in this US that allows for major US companies to terminate the employment of people here in this country and move those jobs overseas. We have foreigners all over the place selling things to us, mopping our floors, taking care of our babies, etc., etc. We certainly have foreigners talking to us on the phone with questions we have about our products we buy and services we buy. And, by foreigners, I literally mean people that are here for the short term working a US job, then trotting back off to their native land--probably because the US company has just opened office there.

And, war has not ended. We did not change the Middle East. We may have drawn lines in the sand. But it's very windy in the Middle East.

A near space Science project, such as I outlined to Jim, is a great way for Hams to get involved in a whole lot of fun, and a bit of work, but that can be fun too.

Essentially we are building and launching "almost satellites". This is a balloon launched payload that heads to around 100,000 feet or so, conducting experiments for the duration. The experiments can be just about anything you can think of that can be done at that altitude. Most launches are multi-mission, with both science and Ham fun stuff on board. And of course the Ham fun can be scientific too.

Hams have had fun ballooning for quite a while, but the advent of inexpensive GPS has changed things dramatically. We now fully expect to get our payloads back! That wasn't the case not too many years ago.

The balloon is usually one of the latex weather balloon variety. Zero pressure balloons can be used too, but since they are designed to go up and stay up for a long time, that would be a more complex proposition.

The payload uses Amateur radio for command and control. At the heart of the system is a GPS unit in conjunction with a packet radio. The telemetry data is sent back to earth and kept track of with a computer. The computer lets us know where the payload is, where it is going and how fast, and predicts the landing site. Oh, and it's freeware.

In addition, the packet radio can send back other info as the mission may desire. The mission is often controlled by a microprocessor. To date, a lot of balloonatics use basic stamp controllers.

Often a repeater is put on board. A small one has a lot of coverage at 100,000 feet! There is usually a VHF beacon, and occasionally a 10 meter beacon also, although that is not as prevalent as it was before GPS.

The experiments vary. One of the favorite devices for the grade and middle school kids is something called a pongsat. This is an experiment that can be anything that will fit inside a ping-pong ball. Sounds weird, but there are plenty of small scale experiments that fit the bill... er, ping-pong ball.

The balloon lifts the payload to the predetermined altitude, and bursts. The payload drops, and the Ham comms can continue during descent, although the first few moments after burst can be pretty weird as the payload often does some pretty strange gyrations until the parachute can grab some atmosphere. Drops like the proverbial rock.

All this time, the GPS is keeping track of the whereabouts of the payload. Then at landing, it turns into a foxhunt as the hams use the beacon transmissions to find the payload. With the advent of us getting used to the software and the precision with which the GPS can determine

the location, it is not too uncommon for the recovery team to witness the landing.

Launch of one of these things does not take as much bureaucratic red tape as most people think.

And it can be done for surprisingly little money.

The people that are needed are of course Hams, and people with some programming experience. People with experience building things, and a meteorologist can't hurt! People that don't mind a drive on a weekend day to serve on the recovery team. Plenty of subteams, such as payload, publicity, science, visualization, integration, education liaison. Even people that might just want to feed all the other reprobates.

This is real stuff. This might spark the interest in science in some youngster. And that is not only a career choice, but a service to the country. American scientists are becoming pretty rare.

Its great publicity for Amateur radio.

And we can innovate and experiment. Radio is a pretty mature science now. It's doubtful that any of us are going to invent a grand new communication scheme, or an antenna that does DC to daylight, or even one that is a whole lot better than what we have now. So What we need to do is to integrate what we have now, and do some innovation with it. We also need (or at least should) prove our worth to the community.

That we can do it while having fun is a real bonus.

Yup.

Indeed. I noted in a reply to Brian which I moved to a subthread, that
we are probably not going to be inventing as much as we used to, so it
is now time to innovate.

Possibly. I would prefer to tap into talents of volunteers (likely
from the University!! ;^)) but a direct collaboration would prove a
little complex.

> For example: what permits are needed to legally launch a package
> weighing, say, 10 pounds?

Permits, no. But there are some definite rules you have to follow. If
you keep the payload at 6 pounds or below, the rules aren't too
daunting. Its more of a "let us know" thing.
>

Good thinking, Jim! Yup, that's what we would do. The GPS is interfaced
with a Packet radio, and the data sent to earth to be processed by computer.

One more use for a supposedly "dead" mode!

> The end result might be called a "kluge" by some naysayers, but all
> that really matters is gettting the job done.

Kluge? It is a integration of off the shelf components applied in a
novel way to achieve results that were very difficult even 10 years ago.

But yeah, some will call it a kluge!

> launches would be practical.

Launches would likely be in Central PA, Just east of the Alleghenies.
Landings would be in the eastern part. We will try to keep it within a
hundred miles or so. One of the interesting parts of this is that the
payload won't be spending all that much time where it could present a
problem.

>> So there you are Jim. A way to innovate, experiment, and have fun at

That is certainly a part of the package. The location beacon transmits
to the hunters, and of course if the payload goes off course, having
local hams get a fix is a big help.

I want to get some HF experiments going on some of the flights. Not
sure exactly what yet.

BUt I can see this has you thinking!

Very good. Here's another but I can't credit the author..dunno who it is.

It is the soldier, not the reporter, who has given us freedom of the
press.

It is the soldier, not the poet, who has given us freedom of speech.

It is the soldier, not the campus organizer, who has given us the freedom
to demonstrate.

It is the soldier, who salutes the flag, who serves beneath the flag, and
whose coffin is draped by the flag, who allows the protester to burn the
flag.

He is the cop on the beat who spent six months in Saudi Arabia sweating
two gallons a day making sure the armored personnel carriers didn't run
out of fuel.

He is the barroom loudmouth, dumber than five wooden planks, whose overgrown frat-boy behavior is outweighed a hundred times in the cosmic scales by four hours of exquisite bravery near the 38th parallel.

She - or he - is the nurse who fought against futility and went to sleep sobbing every night for two solid years in Da Nang.

He is the POW who went away one person and came back another - or didn't come back AT ALL.

He is the Quantico drill instructor that has never seen combat - but has saved countless lives by turning slouchy, no-account rednecks and gang members into Marines, and teaching them to watch each other's backs.

He is the parade - riding Legionnaire who pins on his ribbons and medals with a prosthetic hand.

He is the career quartermaster who watches the ribbons and medals pass him by.

He is the three anonymous heroes in The Tomb Of The Unknowns, whose presence at the Arlington National Cemetery must forever preserve the memory of all the anonymous heroes whose valor dies unrecognized with them on the battlefield or in the ocean's sunless deep.

He is the old guy bagging groceries at the supermarket - palsied now and aggravatingly slow - who helped liberate a Nazi death camp and who wishes all day long that his wife were still alive to hold him when the nightmares come.

He is an ordinary and yet an extraordinary human being a person who offered some of his life's most vital years in the service of his country, and who sacrificed his ambitions so others would not have to sacrifice theirs.

He is a soldier and a savior and a sword against the darkness, and he is nothing more than the finest, greatest testimony on behalf of the finest, greatest nation ever known.

So remember, each time you see someone who has served our country, just lean over and say Thank You. That's all most people need, and in most cases it will mean more than any medals they could have been awarded or were awarded.

Two little words that mean a lot, "THANK YOU".

Hi all,

The subject line says it all. I have 7 states to go for WAS QRP CW, and need to get 'em logged before the new year for the 90th anniversary endorsement as well.

Well, here they are:

AK
ID
WY
CO
NE (Sure wish this could've been N0BK.)
OK
MS

Hpe we can work something out. I'm using a NorCal 40A at a whopping 3 Watts. Tnx es...

Hallo,

I think that everybody will agree that InfoRelation is a very useful proposal. Thanks to this service I was able to finish my academic project in field of biology. Also I can recommend InfoRelation for those who would like to earn some extra money (I have checked it and it works ;-))!

Sally Finch

Amateur Radio Newsline™ Report 1422 November 12, 2004

Amateur Radio Newsline report number 1422 with a release date of Friday, November 12, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC turns off the ham radio licensing computer and a big Aurora opening hits North America. Find out the details on Amateur Radio Newsline report number 1422 coming your way right now.

(Billboard Cart Here)

**

WITH THE FCC: HAM RADIO LICENSING STOPS AND STARTS DUE TO COMPUTER GLICH

Ham radio licensing came to a screeching halt on November 5th. This after a software glitch caused the computer that issues licenses to do some very strange things. Mark Abramovich, NT3V, has been following the developments from Philadelphia and gas more:

--

The FCC isn't offering any official comment on exactly what happened. But Amateur Radio Newsline has learned that the problems with the Universal Licensing System computer started after an Oct. 28 software upgrade installed by a government contractor.

The problems that followed prompted the FCC to order a five-day shutdown of the system which issues Amateur Radio licenses. The system came back on-line on Nov. 10. However, as of our deadline for this week's program, the FCC still planned a weekend shutdown of the U-L-S for maintenance and expected it to return to operation on Nov. 15.

The American Radio Relay League's Volunteer Examiner Coordinator Bart Jahnke, W9JJ, tells Amateur Radio Newsline he was among the first to detect problems while doing a routine check up on the application of a friend near the end of last month.

Jahnke says he discovered the application was - as he describes it - flagged or marked pending by the
FCC for a review by a live person. He says the automated system and its software are set up for minimal human intervention. Jahnke says such a classification immediately raised concerns that something had gone wrong.

Jahnke tells me once he called his contact at the FCC to report the problem, he was told the computer contractor would be notified to investigate.

A couple days later, Jahnke says he was told the problem was fixed. But, as Jahnke tells me, he checked and found that the computer problem had gotten worse. He says he and other VECs were finding the U-L-S had begun issuing Group D call signs - the 2 X 3 ones - to new licensees out of sequence. He says only the first and third call-district applications somehow escaped getting caught up in the problem.

At that point, Jahnke tells Amateur Radio Newsline he and other VECs called the FCC. He says the commission told the contractor to pull the plug on the system on Nov. 5, run some diagnostics and fix it. A message posted on the FCC's website on Nov. 5 said simply: "The granting of Amateur applications has been temporarily suspended. We apologize for the inconvenience."

Prospective hams who had passed VE exams earlier and were awaiting their call sign were getting nervous. Some who received the out-of-sequence call signs were wondering whether the call signs were OK to use. A few had even received a second call sign, cancelling the first. In all, Jahnke says about 130 licensees were affected and thousands of license applications were backed up in the system.

By Nov. 10, Jahnke says the FCC began issuing letters cancelling the out-of-sequence call signs and awarding the proper call signs to new licensees. For some, he says it was their third call sign in a matter of days.

Jahnke says the FCC deserves credit for responding as fast as it did. He also has praise for the other VECs across the country who were in touch the with FCC, too. Jahnke says he's crossing his fingers and hoping the planned weekend maintenance of the FCC U-L-S computer, won't undo the system fix.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

More on this situation in future Amateur Radio Newsline reports. (ARNewsline(tm), NT3V with input from FCC and ARRL)

**

UNEXPECTED VHF DX: THE BIG AURORA OPENING OF NOVEMBER 7

--

N6ZE: "The aurora was very bright most of the time and the magnetic bearing from the airplane extended from 300 degress through about 060 or 070. We saw this for about 3 hours and a distance of probably 1900 statute miles."

That's Pete Heins, N6ZE, describing last Sunday night and early Monday's magnificent Aurora from his vantage point in the right seat of a Boeing 757 jetliner. Pete was the co-pilot that night, flying from Los Angeles to New York's J-F-K International airport.

--

N6ZE: "At no time was the visability obscured by clouds, and for about the last 1 hour of the flight we did have about a 1/4 moon in the Eastern sky climbing, and we were still able to see the AU."

--

And while Pete was making his way across country, hams on the ground were sitting on 6 meters, 2 meters and all the bands above. And some like Dave Bernhardt, N7DB, in Boring, Oregon were hearing and working stations all over the place. Dave primarily operated 2 meters where according to the V-H-F reflector he worked W7IUV, K7XC, K7GS, WA6KLK and VE7DXG to name only a few. And Dave was not alone.

On the other side of the country, Jeff Klein, K1TEO, in Trumbull, Connecticut reports making Aurora propagation contacts on 2 Meters as far south as Alabama and Tennessee. To the west Jeff worked stations in Missouri, Iowa and Minnesota.

According to reports from NASA, the Auroral opening was caused by a Coronal Mass Ejection or C-M-E on the Sun. That event happened late on Friday, November 5th with the ionized particles reaching our Earth late on Sunday. Television news programs on Monday night showed pictures of this very bright Aurora as far South as Minnesota and northern Kansas.

On Tuesday the 9th two more solar shocks have arrived. Paul Kelly, N1BUG, in Milo, New Hampshire reported them on the VHF Reflector. The first hit just after 09:00 UTC but did not contain favorable magnetic field vectors or strength to produce Aurora at North American mid-latitudes. The second, arriving near 18:20 U-T-C did produce the classic Aurora buzzing. He later describe this event comig just in time for the natural late afternoon peak for auroral backscatter. He says that the Aurora came up fast and suddenly 2 meters filled with strong buzzing signals. He says over the reflector that he worked as far South as grid square E M 66.

And while hams who only operate the high frequency bands were complaining that 80 through 10 meter propagation had literally disappeared, those like N1BUG, N7DB and K1TEO on 6 meters, 2 meters and above were calling C-Q Aurora and making lots of contacts. All that is except Pete Heins, N6ZE, who landed his big silver bird at New York's J-F-K airport just as the sun was coming up. Then again, you have to admit that sitting at 37,000 feet on the flight deck of a 757, Pete probably had the best view of all. (ARNewsline(tm), N6ZE, VHF Reflector)

**

MORE ON PROPAGATION: WWW.HFRADIO.ORG/PROPAGATION

By the way, Dick Mannheimer, K6LAE, who was one of the first to alert us to the Aurora also passes along information on an excellent propagation website. Its in cyberspace at www.hfradio.org/propagation.html

The site is operated by Thomas Hood, NW7US. If the name and call sign sound familiar its because this is the same Thomas Hood who writes propagation columns for CQ, CQ VHF, Popular Communications and Monitoring Times magazines.

We have looked at the site. It's well worth bookmarking on your web browser. Again the URL is www.hfradio.org/propagation.html (K6LAE)

**

HELPING HAMS: UNITED WAY REPORTS HUGE HAM RADIO RESPONSE TO ARRL HOLIDAY TOY DRIVE

The United Way in Martin County, Florida, reports "a huge response" by the Amateur Radio community. This, to the ARRL's call to support a toy drive on behalf of the agency's "White Doves Holiday Project."

According to the ARRL Letter, Carol Hodnett, who directs the United Way of Martin County's Volunteer and Community Resource Center says League members from Maine to California have sent toys or money, and more is arriving every day. The League hopes to provide toys for youngsters left homeless or displaced by a string of hurricanes that hit the region earlier this year.

There is still time for you to take part in this very worthwhile project. All you need do is to purchase an unwrapped toy for a boy or girl aged 1 to 14. Please send it prior to Thanksgiving, Thursday, November 25th. Be sure to include a QSL card or 3x5 card displaying your call sign. Mail it to Ham Radio, The United Way White Dove Project, 50 Kindred St, Suite 207, Stuart, FL 34994.

In our view this is Amateur Radio at its very best. Hams helping kids in a true time of need. (ARRL)

**

ENFORCEMENT: ARE YOU THIS PERSON?

An FCC license holder who is likely a ham is being asked by the agency if he is the same person convicted of a number of criminal acts. And the agency has an important reason for asking. Spokesman Daryl Duckworth, NN0W, explains:

--

Duckworth: "Regarding qualifications to remain a licensee, in inquiry concerning criminal convictions for theft by deception and theft by failure to make required disposition of funds as the result of an investment scam went to a licensee in Johnstown, Pennsylvania."

--

According to the FCC release, the person involved is also under investigation by Pennsylvania Administrative Office of the Courts for a possible indecent assault. This is alleged to have been committed on July 30th, 2002.

The purpose of the probe is to determine if the person contacted is the same one as in the alleged and proven criminal cases. For that reason the FCC has withheld the persons identity or any other factual material to indicate whom he or she might be.

But if its the right person, he or she was given two options by the agency. The person can provide additional information on the convictions and charges for consideration by the Commission. Alternately, he or she can voluntarily submit a license for cancellation in order to avoid a hearing on the issue. (FCC, RAIN)

**

ENFOECEMENT: YOU CAN'T SELL THAT BEACON

Still with enforcement news, word that ACR Electronics, Inc. of Fort Lauderdale, Florida, has been fined $75,000. This, for marketing a personal location beacon to the general public that had not been approved by the Commission.

Now here's the ironic part? The CGC Communicator reports that some of the material submitted to the FCC by ACR helped make the case against the company.

It's all on line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-253871A1.doc and http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-04-259A1.doc (CGC)

**

ENFORCEMENT: POWER - LESS POWER CAPTAIN

An unlicensed broadcaster's response to an FCC Notice of Violation has helped to clinch a $10,000 fine issued against him. Amateur Radio Newsline's Bill Pasternak, WA6ITF, has the details.

--

Well, the details really speak for themselves and we would be hard put to say it better than David Michael Oaks. Oaks is the one who received the $10,000 fine for allegedly operating an FM station at his residence in Beaverton, Oregon. This, without the benefit oof holding a valid license to do so.

Quoting from the FCC report and order affirming the fine, the agency says that in responding, Oaks did not deny the charge. Rather, he stated that he was attempting to correct the violation by lowering the power each time he received a notice that he was operating an unlicensed station.

But that's not all. The FCC goes on to say that Oaks asserted that the investigating agent told him that the effective range for a transmitter operating pursuant to Part 15 of the Rules is about 100 feet. Also, that if Oaks chose to do so, he could purchase a Part 15 certified wireless microphone to compare the range of that signal with that of his station.

Oaks did not choose to do so. Nor did he refrain from operating after receiving several written warnings. Based on all of this evidence, the FCC says that the $10,000 fine will stand.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles

--

More on this case is on line at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-3504A1.doc
(FCC)

**

RESCUE RADIO: PROPOSED RADIO JAMMING SYSTEM DROPPED FOR THE MOMENT

Some good news and some bad about an emergency information system proposed by Alert Devices International Corporation. The company has requested that the FCC to dismiss its Petition for Rule Making to create an Emergency Vehicle Signaling Service. This is the previously described service that would allow emergency vehicles to jam out authorized broadcast stations and replace them with emergency warning messages designed to attract the attention of affected motorists.

The good news is that the FCC has granted A-D-I's dismissal request. The bad news is that ADI - according to its latest filing - proposes to submit an "expanded version" of its Petition in the near future. Its all on the web at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-3521A1.doc
(CGC)

**

MORE POWER CAPTAIN: ELECTRICAL INDUSTRY CHASTISED FOR 2003 BLACKOUT

Those wonderful people that are now bringing you BPL have bigger problems to worry about. This after Federal regulators issue a scathing review of the electricity industry's voluntary efforts to make their power grids more reliable.

The report comes about a year after nation's worst blackout that hit on August 14th of 2003. According to staff at the Federal Energy Regulatory Commission, power industry audits play down shortcomings of the grid system, rely on ambiguous standards that often are ignored and reflect vast differences between the best and the worst performers.

But the agency's chairman Pat Wood did say that there have been improvements since the blackout that was caused by power line problems in Ohio and affected eight states from Michigan to New York as well as parts of Canada. (Published reports)

**

IN PRINT: ALL ABOUT TONE

And with more and more repeaters implementing some form of tone access, it is C-Q Magazine that's taking the lead in explaining how it works to the ham community. In his three page article in the November issue, writer Dave Ingram, K4TWJ, "How It Works" column traces the use of tone access and explains why it can be far more of a friend to hams than a way to keep them off a system they may want to try. You can read what Dave has to say in the November C-Q on newsstands right now. More information is on the web at www.cq-amateur.radio.com (CQ)

**

ON THE WEB: QRZ.COM NEEDS YOU

The giant Q-R-Zed dot com website says it needs some volunteers to help it better serve the needs of the world wide ham radio community. According to its owner Fred Lloyd, AA7BQ, the popularity has resulted in a need to enlist a few more volunteers to help out on the website operations.

Lloyd says that Q-R-Zed currently has openings for two types of volunteers,. These are board Moderators and Callsign Database Administrators. An explanation of the responsibilities of each is on line at the Q-R-Zed site. Its in cyberspace at www.qrz.com. (qrz.com)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to

the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

CHANGING OF THE GUARD: SHIRLEY WILKERSON JR. W4TBU S.K.

Some sad news to report. Word that Elmer Extraordinary, Shirley Wilkerson, Jr., W4TBU, died on Monday, November 8th. As reported last week, Wilkerson was 84 years old and had been hospitalized in declining health.

According to Tom Webb, W4YOK, Wilkerson was licensed in 1950 and was a one-time member of QCWA with his story featured in the winter 2003 edition of the Q-C-W-A Journal. He is survived by a sister. (W4YOK)

**

TELECOMMUNICATIONS SECURETY: PASSCODE FROM AMERICA ONLINE

Turning to the high tech page, America Online says that it will begin offering members a security device and service that has been used to safeguard business computer networks. This after parent company Time Warner Inc. announces that its AOL unit has signed a deal with Internet security company RSA Security Inc., to launch its new AOL PassCode.

Using an ever changing algorithm, the system is designed to add an additional layer of protection to member accounts. PassCode users will be provided with a small handheld six-digit numeric code key which refresh on the device every 60 seconds. To log onto an AOL account equipped with the service, users will have to type in the six-digits in addition to their regular password.

The price of the code-key device will be $9.95. Service costs will range from $1.95 to $4.95 per month. This, in addition to the usual America Online subscription fee. (AOL, published reports)

**

EMERGING TECHNOLOGY: FALSING CALLER ID

The Washington Post reports that a new technology can trick U.S. caller-ID services into displaying someone else's name and telephone number. The Web-based systems make the name and number appear in a call recipient's caller-ID box.

A company called Star38 that launched in September with plans to market to debt collectors has changed its strategy after consumers complained. Star38 admitted the approach was "flawed," and now says it will market their system to law enforcement agencies.

New Jersey-based Camophone says it will perform the service on a call-by-call basis for a fee of $5 and up. The company said it recognizes that the service could be abused but insists its intent is to help customers protect their privacy.

But consumers worry that the technology could be used by stalkers and debt-collection agencies, some consumers worry. The Direct Marketing Association said masking a marketer's identity is illegal under rules enforced by the Federal Trade Commission and the Federal Communications Commission. (Washington Post)

**

HAM RADIO IN SPACE: AO-51 E-MAIL REQUEST BOX

AMSAT North America has announced the establishment of an E-mail address for AO-51 users to submit requests and ideas for Experimenters Wednesday operations. AMSAT says that this is a chance for the ham community that uses AO-51 to request the modes that they are interested in* seeing operated on during the weekly Wednesday times. All input will be noted but do not expect a reply to your E-mail. Send your requests or ideas to ao51-modes@amsat.org (AMSAT-NA)

**

WORLDBEAT: VE3PU NEW TREASURER OF RAC

Back here on mother Earth, word from Radio Amateurs of Canada that Ken Pulfer, VE3PU has been appointed to the position of Treasurer. Pulfer will complete the unexpired term of Eric Ferguson VE3CR who recently resigned.

This is not Pulfer's first time in the job. He has served as R-A-C Treasurer in the past, and brings a wealth of experience to the position. (RAC)

**

WORLDBEAT - UK: FINAL G5RV LOGBOOK RETRIEVED FROM EBAY

Meantime, word from the United Kingdom that the final log book of one of the worlds best-known radio amateurs has been saved for posterity. This, after it was put up for auction on eBay.

The late Louis-Iarney, G5RV, of G5RV antenna fame was one of the founding members of the Chelmsford Amateur Radio Society in 1936. So when Chelmsford club member Duncan Munro, M0KGK spotted that G5RV's last ever logbook was being auctioned, the club decided to buy it.

Munro did the bidding. Despite fierce competition he managed to secure the logbook in the last eight seconds of auction.

The logbook shows that G5RV's final QSO's took place on the 11th January 2000 and were , appropriately enough recorded on page 73 of the logbook. The stations contacted were Ron Glover, G0WGP, in West

Sussix and club President Harry Heap, G5HF, in Chelmsford. Louis was, of course, using his famed G5RV antenna for all of the contacts. (GB2RS)

**

DX

In D-X, word that W-6-S-J, will be on the air from the Bahamas as C6AWS from November 26th through December 2nd. Activity will include a Single-Op/All-Band/Low-Power entry in the CQ World Wide DX CW Contest. During non-contest periods, he will concentrate on the WARC bands. QSL to his home call. (OPDX)

And Look for 7Q7LA back on the air from Malawi in a few weeks. This, as G0IAS, updates the OPDX that he is hand carrying some ham gear for Ron to be sure that it arrives safe and sound. G0IAS will leave the U-K on the 28th of this month and is expected to arrive at the Lakeshore on the 30th. The confirmation route for 7Q7LA remains direct to G0IAS. There is no QSL bureau in Malawi. (OPDX)

**

THAT FINAL ITEM: UK HAMS ON THE AIR WITH EXPANDED 40 METER PRIVELEGES

And finally this week, hams in the U-K have taken to the airwaves with their recently expanded privileges. RSGB Newsreader Jeramy Boot, G4NJH, is where it all took place:

--

UK radio amateurs gained access to new frequencies between 7.1 and 7.2MHz from 31st October.
After dark, the band between 7.1 and 7.2MHz is still full of powerful broadcast stations, although some clear frequencies can be found.

The band became available on the second day of the CQ World Wide DX Phone Contest. Many UK stations took advantage of the new band by making contest QSOs with stations in the USA on their own frequency, instead of having to work 'split' as had been the case when contacting North America on 40 metres SSB.

During the daytime, numerous UK stations are now able to have virtually interference-free inter-G contacts above 7.1mhz.

The new band is available to radio amateurs on a Secondary, non-interference, basis until 2009. After the end of March 2009, the broadcast stations should move to other frequencies and 7.1 to 7.2MHz will then become an amateur Primary band.

Jeremy Boot, G4NJH, in Nottingham.

--

Amateurs in the Republic of Ireland were also granted access to 7.1 to 7.2 MHz towards the end of October, joining those in Croatia, Norway and San Marino who already had access to these frequencies. Hams in Switzerland will also gain access to 7.1 to 7.2MHz from 1st January 2005. (GB2RS)
**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Norm Seeley, KI7UP, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

Hmmm?

You have children, Steve. If one of them acts like a child, do *you*
do the same? I doubt it very much.
> >
> >> He's a scumbag bully.
> >
> >Well, that's a matter of opinion.
>
> It's a matter of fact.

A "bully" is someone who gets others to do his/her bidding by force or
intimidation. When has Len been able to do that to me?

At best, Len is a bully-wannabe.
>

Nope. But then again, I haven't read every issue of "ham radio", "CQ"
or "73". Nor have I visited every amateur radio website in existence.
There may exist, somewhere out there, a reference to Len's articles in
"ham radio" magazine.

Besides, what does it matter? Len's most recent article in "ham radio"
was published over 22 years ago IIRC.

> >>You've told me to set the example, Jim. I only comment on a LennieRant

Well, Steve, that is why I said, "The rest of your post aside, Steve..."

It's not unusual at all to see a branch away from the main topic of
something transcend to something else.

Kim

1888. Ham Radio Addiction Syndrome

Newsgroup: rec.radio.amateur.policy
Date: 2004-11-13 13:30:43 UTC
From: Lloyd <Lloyd@webmandx.net>
Message-ID: <cn5282dff0@pita.alt.net>
Source record: 99836

Simple Test for Ham Radio Addiction Syndrome (HRAS)

1. Can you go without ham radio for 90 days?
2. Have you gone more than three days without bathing?
3. Are the clothes you wear dirty and smell?
4. Do you take your meals in the ham radio shack?
5. Have you constructed a separate building behind your home
for ham radio?
6. Do your neighbors hate you because of TVI?
7. Do your kids or grandkids wonder if they have a father
or grandfather?
8. Have you ever done a family activity which does not involve
taking your ham radios with you?
9. Have you forced your xyl & kids to get their tickets? Be honest.
10. Do people stare in awe at your car or truck because it has so
many stupid looking antennas on it?
11. Do you come to this forum to bicker with other hams?

If you were honest and answered two or more of these questions
in the affirmative, chances are good that you suffer from HRAS.
Help is available from fellow hams who have recovered from HRAS.

73,

Lloyd

>
>1. Can you go without ham radio for 90 days?

Nope.

>2. Have you gone more than three days without bathing?

Nope. I have a waterproof rig and can take it in the shower with me. I sign "maritime mobile" when I do...

>3. Are the clothes you wear dirty and smell?

Nope. I clean them while I am in the shower. Why waste water? And what idiot would talk on his HT in the shower while nekkid...???

>4. Do you take your meals in the ham radio shack?

Yep. They taste better there than in the shower. Don't get soggy quite as easily, either.

>5. Have you constructed a separate building behind your home
> for ham radio?

Hmmmm....didn't "construct" it, but had one of those prefab barns for a couple years! Finished the interior, had AC, 110/220 AC...Cozy...No kids...

No shower in the barn, though.

>6. Do your neighbors hate you because of TVI?

Nope...I am an Amateur...NOT a CBer!

>7. Do your kids or grandkids wonder if they have a father
> or grandfather?

No more than your parents wonder who your real mother is....

>8. Have you ever done a family activity which does not involve
> taking your ham radios with you?

Yep.

>9. Have you forced your xyl & kids to get their tickets? Be honest.

Nope.

>10. Do people stare in awe at your car or truck because it has so

>
>86 years since "the war to end all wars" ended...

There was a much bigger war a bit later. It was in all the papers
and in movie newsreels. It was called World War Two.

Regardless of your trying to re-interpret history of the past, you
cannot present ANY valid reason for the United States of
America to deliberately INVADE another country in the "second"
Gulf War involving Iraq of NOW.

Iraq of only a dozen years ago - NOT the one of 85 years ago -
invaded the smaller country of Kuwait. We - a coalition of several
nations - drove them back out but did not invade Iraq in turn. About
a decade later the USA invaded Iraq.

Try to stay focussed on the relatively RECENT past, not what
happened at some League of Nations meeting of long ago.

While you are at it, try to remember over a thousand service men
and women who died in-service AFTER the supposed end of fighting
of OUR INVASION of Iraq. Justify that to their family and friends...all
that to find some non-existant "weapons of mass destruction."

Happy celebration of World War ONE.

Have you looked at Federal Air Regulations in regard to such
high altitudes? This isn't like hot-air ballooning at low altitudes
where manned free balloons have rights of way over all others.

Back in the 60s the weather folks used to loft a quarter million or
so weather balloons per year...with little transmitters in them and
telemetry done with extremely low-cost electronics. Good example
of doing things simply and for low cost per launch.

>The experiments can be just

>and stay up for a long time, that would be a more complex proposition.

You need to do some math on that before envisioning such a "low-
cost" approach to get to 100 Kilofeet. Those 8-foot (typical)
"weather balloons" aren't going to get up that high, not even a mass
of them.

You need to consult some (free for the asking) density values of
the atmosphere and some back-of-the-envelope figuring first. Note
that you have to allow for the lifting gas expansion with altitude. It
is far from the same at 100 kilofeet versus sea level.

> The payload uses Amateur radio for command and control. At the heart of

>the system is a GPS unit in conjunction with a packet radio. The
>telemetry data is sent back to earth and kept track of with a computer.

>The computer lets us know where the payload is, where it is going and
>how fast, and predicts the landing site. Oh, and it's freeware.

That's going to be a minor cost item. As you will find out, the
balloon structure, its support infrastructure, and lifting gas will
cost more than you think..

> In addition, the packet radio can send back other info as the mission
>may desire. The mission is often controlled by a microprocessor. To

>beacon also, although that is not as prevalent as it was before GPS.

Two words: Payload weight.

You can't get up in the blue sky with lack-of-detail blue sky ideas.

If it were that easy, lots and lots of folks would have done so a
half century ago.

> The experiments vary. One of the favorite devices for the grade and

>
> Launch of one of these things does not take as much bureaucratic red
>tape as most people think.

You've done that? You are going to the edge of the stratosphere and
think you can do so freely? Ain't quite that easy.

> And it can be done for surprisingly little money.

"Surprisingly little" is a highly subjective term. Real projects have
quite objective, finite budgets.

> The people that are needed are of course Hams, and people with some
>programming experience. People with experience building things, and a
>meteorologist can't hurt! People that don't mind a drive on a weekend

Sounds like you've already filled the "executive" position. :-)

> This is real stuff. This might spark the interest in science in some
>youngster. And that is not only a career choice, but a service to the
>country. American scientists are becoming pretty rare.

"Becoming pretty rare?" Not quite as any visit to academia will
show but feel free to get opinionated.

> Its great publicity for Amateur radio.

It will get ham radio noticed, but what is written up by journalists
may not be what you expect.

Free ballooning has been going in the USA since 9 January 1793,
the first American flight by Frenchman Jean-Pierre Blanchard,
lifting off from the Walnut Street Prison in colonial Philadelphia.
That was witnessed by none other than President Washington.
[from "Lighter Than Air Flight" by Lt. Col. C. V. Glines, USAF,
Franklin Watts Inc., NYC, 1965, data from pp 29-35] That's over
two centuries of time...

> And we can innovate and experiment. Radio is a pretty mature science
>now. It's doubtful that any of us are going to invent a grand new
>communication scheme, or an antenna that does DC to daylight, or even
>one that is a whole lot better than what we have now. So What we need to
>do is to integrate what we have now, and do some innovation with it. We
>also need (or at least should) prove our worth to the community.
>
> That we can do it while having fun is a real bonus.

You can have all your innovative fun doing many, many things.
Until you find out what helium costs to lift the total balloon (the
balloon itself, its payload, its carrying structure, its all going to
be a pipe dream having no more basis than enthusiasm.

Check out the prices for helium with a gas supplier, plus what it
takes to haul to HEAVY gas cylinders to a launch area, plus the
metering system plus the filling system plus whatever else. All
that after you've investigated what the actual lifting capacity will
be in terms of ounces per cubic feet of balloon. [I said ounces,
not pounds...lighter than air does not mean negative weight]

You could get "efficiency" by going for hydrogen gas...which is
offset by very direct DANGER from many and varied sources.

Still going for 100,000 foot altitude? Start thinking in terms of
the balloon exapanding to something on the order of EIGHT times

in size at altitude maximum. That's visible on some of the high altitude research balloon flights of the 1960s using lots and lots of plastic sheet for balloon material.

Your project may need a virgin...such as Richard Branson...to help start it off.

Now, if you are REALLY thinking about this whole thing, look into "Project STAR" and a little thing like a model airplane that crossed the Atlantic (from Newfoundland to the Irish coast) during the 38 hours in August 9, 10, and 11, 2003. Laugh all you want but a few guys from around DC managed to do that through GPS guidance on board as an autopilot. You can read about it at

http://tam.plannet21.com/index.htm

Pictures and stuff to guide you even if you are not into model flying. 38 hours (approx) of powered flight using only 5.5 pounds of fuel, flight path of 1882 miles. Radio control only for take off and climb-out, then landing in Ireland...the rest entirely on "autopilot." It had some means of reporting its position to earth via satellites. That alone would be of interest to anything else involving GPS location or guidance.

Search around on the huge NASA website for atmospheric info, especially for density versus height. You could do an approximate curve of payload + balloon weight versus cost of helium in hundreds of cubic feet to whatever altitude limit. That will give you some realistic viewing into feasibility of it all.

I have QSO'd with W4AMP recently and he is one cool cat.....
it really shocked me to see his call letters on the list.
If the infamous "India Romeo Oscar" had a list i would surely be
on it because of our not so pleasant confrontation in Southern California
which i frequent every 2 weeks in my travels from L.A. to Miami to L.A.

Steve, I have to agree with you here. While we all at times reply to
Len, there isn't any point in telling each other not to. Jim, it
probably isn't all that consistent of an approach to kvetch about
Steve's postings to him. Granted you two have different approaches, but
that isn't the point here.

Its a newsgroup. There are sometimes nasty disagreeable people here. We
reply to them because there is something in it for us. Sometimes its
just plain fun! The guy on the other end is having fun too. So be it.

That has been the crux of Steve's problem with his adversaries. He
accuses them of being liars all the while lying himself.

It just isn't right.

I think it is one point.

>The point is suggesting one course of actions to everyone else, yet
>continuing the same course of action yourself. It doesn't look right.

The difference (as I see it) is how we respond.

But perhaps your point is valid also.

>>> >Len calls me name, posts things that aren't true and attempts to insult
>>> >me.
>>> >In general he behaves like an out-of-control child here. Does that mean I

>>> >should do the same?
>>
>>Hmmm?
>
> "Hmmm?" indeed, Jim.

Just answer the question, Steve. Should I behave as Len does or not?

>You do keep coming back.

Very true.

>It does keep giving him a "raison de guerre"

If attention is all he wants, you have a very valid point.
>
>>You have children, Steve. If one of them acts like a child, do *you*
>>do the same? I doubt it very much.

>Thankfully when she gets out of sorts, I can redirect her and she acts
>accordingly. There ae consequences for acting foolish, and she rarely
>transgresses.

But that doesn't answer the question. If a child of yours throws a tantrum, do
you do the same? I really don't think you do.

However, if both are points are processed together, there's another fact that
develops: If a child acts out simply to get attention, *any* attention is
rewarding that behavior.

>>> >> He's a scumbag bully.

>>> >Well, that's a matter of opinion.

>>> It's a matter of fact.

It's a fact that it's an opinion!

>>A "bully" is someone who gets others to do his/her bidding by force or
>>intimidation. When has Len been able to do that to me?
>
>Everytime you respond to him, Jim...EVERY time.

Not as I see it. But that doesn't mean I should respond, because it may be
rewarding the behavior regardless of the style of the response.

>>At best, Len is a bully-wannabe.

> Everytime you respond to him, he wins.

If attention is his goal, you're absolutely right.

Right now it's republican, as GW won, and the Republicans
have majorities in the House and the Senate. A few years ago
it was the Democrats.

Somehow answering question #8 to say that I've done stuff with
the family without ham radio being involved yields an affirmative.

And answering question 1# to say that I can't go more than 90
days without doing someting involving ham radio yields a
not affirmative answer. Had I said that I could do without
ham radio for 90 days would then force the conclusion that
I have HRAS...

Your survey has "bugs"...

Deal with it, Kim.

Unless you can trace all your ancestors back to someone who crossed the Bering Bridge eastbound back about 12,000 years ago, then you're a foreigner just like the rest of us. All of my parents/grandparents were born in Russia, Romania, and Germany. Foreigners, every one of them, and I couldn't be prouder.

And they still are. One big difference is that they don't attempt to
get their payloads back. They do have a return address on them, and
there is about a 20 percent return rate. That surprised me a bit.

> Sounds like you've already filled the "executive" position. :-)

Yes I have. I do this kind of stuff. Some years ago, I organized and pulled off one of the premier star parties in the Northeast. That actually took much more red tape than this project. The party is still going on, although under the new management, it is not as profitable, despite growing numbers of attendees.

I like organizing groups of people that share a common task.

Wanna help?

Read the links (just a suggestion - I know you don't like being told
what to do) Check out the links. Do a little homework.

I usually give you a pass on most things. But dozens of amateurs are
doing this. Now, with real payloads, inexpensively.

You are very, very wrong.

An addition to my earlier post.....

Those large plastic balloons are not used solely to hold large amounts of helium, although they do.

The zero pressure balloons, as they are called, are actually open at the bottom. As the helium expands with the increase in height, the balloon eventually reaches an equilibrium point where some of the helium escapes through the bottom vent. At this point, the balloon levels off, maintaining roughly the same altitude. These balloons are used for large payloads, and/or a payload that is designed to stay up for a relatively long time. Quite a simple and elegant solution.

For the purpose of Amateur near space science, we usually want to get the payload up and down in a fairly short order. Latex balloons are the ticket for that.

They need a way to burst the balloon on command (i.e., nichrome wire
wrapped around the balloon plug, a receiver, and a battery),
metallized RADAR reflectors on the instrument chain, and FAA clearance
to launch.

> Back in the 60s the weather folks used to loft a quarter million or

They still do. It is called a rawindsonde and the rawin observations
are transmitted over the weather networks and shared worldwide. These
ballons often reach 10MB, but the payload is much smaller than most
EOS amateur projects.

Lots of expansion.

It all adds up. Might be good idea to get a sponsor.

And all of those gps, beacons, packets, thermistors, pressure
transducers, and video cameras and ATV transmitters operate off of
heavy batteries. Luckily the ascent and descent won't be that long,
and the batteries can be scaled back from what is normally required
with one caveat. You'll want the beacon to be operable for several
days, if possible.

Commercial grade GPS recievers are designed to not work above 60,000
feet. Crazy precaution against strapping one to a missile and using
it as a guidance system.

Then at landing, it turns into a foxhunt as the hams use the

Yikes! If they use the nichrome wire on the balloon plug trick...

Sounds like fun. Dense air operations in the eastern states may pose
a big problem.

Much of this depends on the size of the payload.

There are other, much more often used methods to burst the balloon at
the desired altitude.

6 pounds is the magic number for the FAA. NOt a problem for one of
those latex balloons.

Somone asked about that. I don't know the exact results. Hydrogen has
to mix with air to be explosive. The pure stuff would burn with a red
flame in a "pop" sot of mode. I'm not planning on using plain old H tho'.

Should be a lot of fun. I would note that there are some of these
projects going on in Mass. They do it. Although I did see one of their
BalloonTrack screens showing a ocean landing east of Cape C

Whoa: I'm not trying to pee on your parade here Mike, honest, but
let's take a look at a few immutable physical realities. Temperatures
at 100,000 MSL generally range from -50ï¿½F to -150ï¿½F "depending".
Lightweight (ounces) high-end ($500 class) consumer-level GPS
receivers are rated to temps only down to Øº-5ï¿½F and 30,000 MSL max.
altitude. Then comes the same kinds of limits on the rest of the
electronics you're visualizing. How would engineer your way around
these limitations on a freeware budget?

From 100,000 the load could easily land downwind a hundred or more
miles away from the launch site.

>
> Launch of one of these things does not take as much bureaucratic red
> tape as most people think.

The bureaucrats ain't gonna allow a shot to 100,000 and back down
anywhere east of the Mississippi for obvious reasons and sure as hell
not in PA which leaves me out. You're talking a western badlands
proving grounds level experiment. Good luck with the red tape they'll
smack you with. How much would you budget for liability insurance?

> And it can be done for surprisingly little money.

. . . What's your definition of "surprisingly little money"? .....
from WHO?

Bag this 100,000 foot thing, you're 'way over your head with it.
You're vision is doable assuming a more reasonable altitude goal as
has already been demonstrated by others. I suggest you pick their
brains and find out how they pulled it off and add some untried new
twists of your own.

What else can he want, Jim?

He doesn't have nor does it seem he really wants a license. It
could have been his decades ago if he wanted it. He could be a part
of the same fraternity you and I are and be making his mark amongst
them if he so chose to do so. Instead he's the King with his New
Clothes.

> Simple Test for Ham Radio Addiction Syndrome (HRAS)
>
>
> 1. Can you go without ham radio for 90 days?

Yes, did so for several years actually.

> 2. Have you gone more than three days without bathing?

Yes, but that was in the military. Part of the job description you know.

> 3. Are the clothes you wear dirty and smell?

Not now, I'm out of the military.

> 4. Do you take your meals in the ham radio shack?

No, I take them in front of the TV like all you other couch potatoes do.

> 5. Have you constructed a separate building behind your home
> for ham radio?

No, it was here when I bought his place. A real nice 25 x 35.

> 6. Do your neighbors hate you because of TVI?

No, I send them to the idiot CBer with the Varmit across the street.

> 7. Do your kids or grandkids wonder if they have a father
> or grandfather?

Nope

> 8. Have you ever done a family activity which does not involve
> taking your ham radios with you?

Yep

> 9. Have you forced your xyl & kids to get their tickets? Be honest.

Nope

> 10. Do people stare in awe at your car or truck because it has so
> many stupid looking antennas on it?

Nope, only ant on MY truck is a mag mount. Which is off most of the time
because I can't stand the dumb fools around here running packet on the FM

frequencies.

> 11. Do you come to this forum to bicker with other hams?
>
Yeah, thats fun actually.
>

> If you were honest and answered two or more of these questions

Loud and Clear over here.

Maybe you need a radio that actually works.

;-o

A greater power must have had enough of Baxter's air-time bull and pulled
the plug on him for a few days.

No, Hans. You're as wrong as wrong can be on this one. I am NOT talking about people who are ctizens of this country. I am talking about people who are here with cards who will go back again.

And, you can raise your royally dignified ass all you want. Be proud. In a few more years you're going to be wondering where the US is that you used to speak of.

Jim,

I bit my tongue for awhile, but I must comment.

Your title "For Those In Peril On The Sea" is taken from the refrain of
the Navy Hymn, a rather sacred phrase to those who've served. Applying
it to a commercial auction item seems inappropriate.

73, de Hans
RMCM, US Navy

NAVY HYMN
Eternal Father, strong to save,
Whose arm hath bound the restless wave,
Who biddest the mighty ocean deep
Its own appointed limits keep;
Oh, hear us when we cry to Thee,
For those in peril on the sea!

O Christ! Whose voice the waters heard
And hushed their raging at Thy Word,
Who walked on the foaming deep,
And calm amidst its rage didst sleep;
Oh, hear us when we cry to Thee,
For those in peril on the sea!

Most Holy Spirit! Who didst brood
Upon the chaos dark and rude,
And bid its angry tumult cease,
And give, for wild confusion, peace;
Oh, hear us when we cry to Thee,
For those in peril on the sea!

O Trinity of love and power!
Our family shield in danger's hour;
From rock and tempest, fire and foe,
Protect us wheresoever we go;
Thus evermore shall rise to Thee
Glad hymns of praise from land and sea.

As likely as not, the initial flights will be tethered. Those will
check out the functionality of the equipment. In fact, depending on the
launch day conditions, we may want to peak at decidedly less than
100,000 feet. Altitude is not strictly the goal.

>
> ??
>
> Why would that be?

The party is on state park land in the middle of a state forest. This
meant permits and waivers. This meant The group had to be incorporated
as a nonprofit corporation, with all the legal fees and paperwork
involved with that sort of thing. Compliance with all the park
regulations had to be made, with the exception of the exceptions that
had to be granted, in order to put the thing on. Proofs of insurance of
the correct kind had to be made. Electrical power had to be provided via
another group that owned poles on the property, which ended up with me
having to work with both the group and the local pupblic utilities.

It took me the better part of a year to prepare just that -
disregarding the details of the actual party.

You act as if this is something new, Kim.

60 years ago, as a child, I saw seasonal migrant workers topping sugar beets, "walking" the bean fields, and similar labor intensive tasks. It was nothing new then either.

Our farmers could not have survived without it.

I apologize if anyone was offended. That was not my intent in any way.

The unit being auctioned is a Marconi marine radio set complete with auto alarm, if I understand correctly. I was reminded of Jeff Herman's experiences at NMO recounted in his writings.

Thanks for calling it to my attention, Hans.

Good question.

The payload package is often constructed of foam sheathing, such as
used in housing construction. 3/4 or inch sheathing can be cut to shape,
and sealed pretty easily. One of my research sources found that the heat
generated by the electronic equipment nearly matched the heat lost
during flight. The internal temperature actually rose by about a degree.

I do plan on having an internal temperature sensor to get a knowledge
base started of this issue.

> miles away from the launch site.

In some cases, yes. Recovery teams will be deployed somewhat east of
the launch site. As the mission profile unfolds, they will head in the
general direction of the predicted landing site.

> smack you with. How much would you budget for liability insurance?

You might want to read the links I provided to Len.

There is a group in Mass doing this right now.

NOAA launches many similar balloons a week in the middle of our town,
which is about three miles away from the local airport. The local
University often launches balloons from the building next to the one I
work in. These are balloon/payload combinations of the same class.

>
>> And it can be done for surprisingly little money.
>
>
> . . . What's your definition of "surprisingly little money"? .....
> from WHO?

It's all relative of course. Lets say there is an initial launch where
everything had to be made.

Balloon - cost will vary but typically a latex balloon might cost
between 30.00 to 90.00. Depends on the weight of the payload.

For helium you want to rent the tank and buy the helium, A large tank of
helium, the 5 foot size is around 50.00. takes somewhat less than a tank
to fill a balloon.

Those are the recurring expenses.

There are some other things, such as line to suspend the payload from
the balloon. I'm not going to include that, but it will add a few
dollars to the cost.

(hopefully) non recurring expenses.

If you opt for the insulation based payload box, you'll get a sheet for
around 5 dollars.

GPS - 100 to 200 dollars.

Packet radio,
2 HT's
Recovery beacon
Basic Stamp
Lithium battery pack (semi recurring cost)

What do we want to do here? I have an HT capable of crossband repeating that I plan on donating to the cause. Cost me 30 dollars at a hamfest.

If I planned on going new, I'd probably purchase a couple of the credit card type HTs. A small one is good, like the DJS-11T for 79 dollars or a dual bander like the DJC5T for 149 dollars.

Basic Stamp controller will set us back around 50 dollars.

There are also all the miscellaneous things that are involved in the project, wiring, circuit boards, connectors etc.

All of this is not all that expensive at all. And there is plenty of room for scrounging to reduce costs.

>> The people that are needed are of course Hams, and people with some

> You're vision is doable assuming a more reasonable altitude goal as
> has already been demonstrated by others. I suggest you pick their
> brains and find out how they pulled it off and add some untried new
> twists of your own.

The altitude is only a small part of the thing. I don't know if you looked at the links I posted for Len Anderson, but to put it simply, there are quite a few amateur groups doing this ALREADY. They are doing it in conjunction with Schools, sending their payloads up, bringing them back and recovering them. They are doing it from British Columbia to the Midwest to the East. They are doing it in Australia and in Europe.

I'm not breaking any new ground with the idea of launching anything. My intentions are the research and payload integration.

Home sheathing insulation works like a charm, and is very inexpensive.

Some people have used those cheap insulated picnic coolers.

A "shoestring operation" which is violating California's "Truth in Advertising"
law by misclassifying their scholarship sponsorship as a "news gathering
expense." That misclassification is called fraud. It's that simple.

> Now, I am not sure if Bill P. would mind, but I am of a mind to request

> >fraud. QED.
>
> ARN provides it's scholarship and "Young Ham Of The Year" award in open
> forum.

...Yet ARN's own web pages don't indicate how this scholarship is funded! Legally, it can't be from donations to ARN as the only donations solicited are for "news gathering" activities (and NO OTHER), not the scholarship. You say that there is no fraud here - so explain how the scholarships are funded.

> You're welcome to show how ARN is committing "fraud" when everyone knows
> they provide these scholarships

If, as their own bulletins imply, they have diverted even one cent from news gathering to fund the scholarship or pay for any of its related expenses, then they have made a false solcitation in violation of California's "truth in advertising" laws - and have therefore defrauded the public.

As previously stated, their violation is not with 26 USC 501(c)(3) but under
state law which governs the content of solicitations for donations to
non-profits. They are soliciting for a SINGLE STATED PURPOSE and diverting
[some of] those funds to some other purpose not stated in their solicitation.

1) If you had any iota of knowledge about the law, you would know that I am correct. (My other reply cited the appropriate statute on this issue).

2) As previously stated and unlike you, I have a life outside of amateur radio and this newsgroup. Sometimes, I don't even have time to check in weekly, unlike you, who apparently has nothing better to do than to sit by your computer and wait for the next post to arrive.

However, with his specific omission, can he still claim to offer a callbook which is a valid extract from the FCC records?

Isn't his callbook now a callbook of "selected records?" [With one non-selected record excluded....]

Did Fred ever state it was a "complete listing"?

I can think of a few more that need to go....

ND8V, and WD4AWO are the ones that come to mind.

Ole "Nerdy Dog Eight Vomit" Fat Mikey and Dumbo Bobby are MAN's main
audience.

Have you heard the phone calls that Dumbo Bobby has made to MAN's show.
Bobby is "real slow", if you get my drift...

Now some retard from Texas has joined in with Dog Vomit, and AWO (A Wet
OldFart, iow, SHIT).

I guess we can refer to them as the 3 Stooges.....

No, but doesn't he make a "selling point" on the number of listings (foreign and domestic) he has? Therefore, dropping a few here and there is contrary to his goal, disregarding the fact that the listings he is dropping are still (for the moment) licensed stations.

> I can think of a few more that need to go....

Then write the FCC and ask to get their licenses revoked.

Other persons, at their own request, have had their calls removed from the QRZ site. To my knowledge he's never claimed it was complete in every respect.

Besides, who cares?

I have a more-than-adequate knowledge of the law.

I also have a more-than-adequate knowledge of what constitutes
reasonable common sense. You don't make the grade.

> 2) As previously stated and unlike you, I have a life outside of amateur radio

Hardly. Refer to previous post.

That you make up such silly excuses for your lapses in attention
and inadequate excuses for common sense on further strengthens my
opinion that you're headed for a monumental humiliation if you keep
pushing this "Bill Pasternak is unethical" rant.

"Mr DA! Mr DA! Bill PAsternak is giving scholarships to teenagers
and I want you to make him STOP!"

All it will take to humiliate you right out of that courtroonm,
Stussy, is for Bill to get some of the kids he's given money to to
testify as to how much they benefitted from the funds, how they have
gotten additonal education they may not have received otherwise, and
that will be, as they say, that.

Excellent one Hans....

This is truely THE MOST IMPORTANT invention of modern times...

Once we could amplify... all else was possible. Everything electronic at least... How else could we have part of the internet running on Mars??? ;-)

Thanks...

Rich

That "knowledge base" has existed going back to the 1800s. Save
yourself from reinventing the wheel and sit in on a Heat Transfer 101
class and learn how to do it all by the numbers on the back of an
envelope.

> You might want to read the links I provided to Len.

Reading all those would wear out Firefox. But I did scan enough of 'em
to come to realize that you're correct about amateur balloons having
reached 100,000 feet so I have to eat some words I posted.

But you're still going to have to sort your way thru the the very
fuzzy requirements of FAR 101 and I suspect you're seriously
underestimating the amount of drudgery that's likely to take. I've
dealt with the FAA types in the corridor over issues I had with FAR
103. They wound up arguing amongst themselves for months on end I and
gave up trying to get any decisions or answers out of 'em.

I also caught up with the fact that none of these missions can be
insured. And you wanna drop objects out of the sky in an uncontrolled
manner into spots unknown somewhere along the east coast? Fuhgeddit!!

That we can do it while having fun is a real bonus.

There's no new graound here, it's more like a pile of labor than a
real design challenge. If the instrument capsule is sealed at sea
level and flown to 100,000 feet every six inch by six inch x by 3/4
inch thick patch of the foam board will have to survive a 470+/- pound
outward load. Which I doubt will work. So the capsule should be sealed
then evacuated to say 30,000 feet to get those stresses down. I can
take it anywhere from here but I ain't.

Sometimes dumb luck and enthusiasim gets the driveway mechanics there
faster than applied physics does.

Perhaps I should name the project "Icarus"?

>> The altitude is only a small part of the thing.
>
>
> . . . <groan!> . . . -100ï¿½F is only a small part of it huh?

The atmospheric profile shows some interesting things. In the Troposphere, the temperature drops pretty steadily until around 10 Km, then it tends to stay pretty consistent until 20 Km. Above 20 Km, the temperature actually rises somewhat until around 50 Km, at which point it drops again until around 85 Km. At this point it becomes the Thermosphere, in which the temperatures rise dramatically - they can get from 500 to 1500 degrees C. The thermal profiles are by necessity very general.

So if temps were a very big factor, I'd want to get the balloon through the 10 Km area pretty quickly, and up to around 30 and a half Km where it's a little "warmer".

The "command burst" receiver better have some secure coding to
it or some jughead will burst-command it beforehand.

A corner-cube reflector can be done with aluminum foil on a balsa
wood frame...just three mutually-perpendicular planes in that
corner cube, less than a foot in any dimension and still good for
skin tracking.

According to Mike, the FAA is "accommodating." :-)

I had one cluttering up the workshop since the 60s. Military type by
the markings. One-shot battery, a simple aneroid bellows driving a
printed-circuit rotary switch to kick in temp and moisture and light
sensors, all of them variable resistive types that changed the rep.
rate of a simple pulse modulator for the combination RCA pencil
triode and cavity oscillator assembly and inverted ground-plane
antenna. All of that went in the dumpster long ago except the
translucent plastic sleeve on the Xmter assembly went two weeks
ago (found it in a box of junk after sorting out the workshop).

Mere details. It is "doing science!" It is "inexpensive!"

One-shot batteries are one source, but they ARE truly one-shot
and can't be recycled afterwards.

>Yikes! If they use the nichrome wire on the balloon plug trick...

Hydrogen is a very efficient lifting gas. It CAN be generated by
amateurs...chemistry amateurs. Getting into the balloon is going
to be tricky.

"Accommodating" whom? You didn't sumarize, compose a precis
or anything else. What does the FAR SAY?

>> Back in the 60s the weather folks used to loft a quarter million or
>> so weather balloons per year...with little transmitters in them and

>> that you have to allow for the lifting gas expansion with altitude. It
>> is far from the same at 100 kilofeet versus sea level.

Welp, since you didn't really look, here's a capsule from an on-line
calculator:

At 1000 feet, temp 55.4 F, 14.17 PSI, density 1.1896 Kg/cubic meter.

At 10K feet, temp 23.3 F, 10.11 PSI, density 0.9046 Kg/cubic meter.

At 100K feet, temp -50.8 F, 0.1581 PSI, density 0.0167 Kg/cubic meter.

Notice how the DENSITY drops off at a remarkable rate past 10,000
feet. [Density is going to be very important since it will determine
the limit of buoyancy of the whole balloon]

>> Two words: Payload weight.

Tsk. I didn't see much of any "knowledge" displayed, or any sort of
hard science. The Standard Atmosphere has been public for over a
half century, most countries. While the 1976 model has been revised
a couple times since, the basic data is mostly in refinement.

>> If it were that easy, lots and lots of folks would have done so a
>> half century ago.
>
> Back when we had those coal burnin' GPS satellites!

Many, MANY balloons have been lofted (other than rawinsondes)
BEFORE the precursor to GPS, NAVSTAR, was first launched.
That was around 1971 or better than 33 years ago.

Neither GPSS nor NAVSTAR nor GLONASS used "coal" to burn
for anything.

>
> With all due respect:
>
>http://www.eoss.org/faq/faa_liaison.htm

Sorry, sport, but 100 kilofeet of altitude is something you will NOT
do with some surplus "latex weather balloons."

10 kilofeet maybe.

It has to do with BUOYANCY. As the density drops, so does the
"lifting power" of the displaced air (from the balloon itself).

Worse yet, as the altitude increases, the pressure drops but the
lifting gas inside the balloon remains at the same pressure...which
will drop depending on the expansion capability of the balloon
material. At some point, the differential pressure can exceed the
strength of the balloon material. Pop goes the balloon.

> Could you cite where you got your information?

Yes, I can. Old stuff, really. You can do a search under "standard
atmosphere" and get a whole pot of hits, from NASA through
ordinary-folk sites (some having on-line calculators). There's
enough material in basic text books on atmosphere plus gasses.

>>> And it can be done for surprisingly little money.
>>
>> "Surprisingly little" is a highly subjective term. Real projects have
>> quite objective, finite budgets.
>
> And you expect me to post my budget here? "Suprisingly little" is

So far, you've been only as concrete as a pipe dream. Ambiguous
statements.

Now you get all hurt because I post some HARD science figures which
WILL come and bite your project's butt if you don't start getting some
non-ambiguous numbers.

>> Sounds like you've already filled the "executive" position. :-)

>
> Heh, Better check the citizenship of those engineering students.
>
>>> Its great publicity for Amateur radio.

Is it? The globe has been circumnavigated by balloon, millions of
those radio-carrying rawinsondes have been launched and tracked
(by radio, no GPS needed) since they were started. Kids can get
balloons as giveaways in larger stores...or are given out at parties.

>> It will get ham radio noticed, but what is written up by journalists

> Wanna help?

Sorry, I'm not "involved."

Too much "hot air" being generated on this "idea" and it hasn't
"lifted" me.

> Read the links (just a suggestion - I know you don't like being told
>what to do) Check out the links. Do a little homework.

"Do a little 'homework?'" Will there be a "test?"

I've been involved in basic atmospheric data at work for decades
AND have done a bit of lighter-than-air flight experiments as a
hobby...including some careful measurements of structures and
gas bag material, lifting power versus temperature and local
pressure, etc.

> I usually give you a pass on most things. But dozens of amateurs are
>doing this. Now, with real payloads, inexpensively.
>
> You are very, very wrong.

You are very, very petulant.

You give some ambiguous phraseology to the group with a bad "sell"
image and try to flummox someone with the "it's all for ham radio!"
spiel. Not a good way to get a project started.

HARD NUMBERS will give the story's baseline...followed by some
kind of estimate of project cost. The best way is to have some kind
of "rep" behind you.

Case example: Maynard Hill was the builder and trier-outer of the
TAM project (Trans-Atlantic Model). He had been setting model
records (recorded by FAI) for a mere 35 years, mostly in R/C flying
(altitude way up to the 20s of kilofeet, distance better than 750
miles to name two). His local club knew it and formed the "STAR"
group to get in on the TAM. It took OVER two dozen airframes
(built by Hill) to get to the 2003 record breaker after two prior years
of all involved footing their own bills to reach Newfoundland and
Ireland. By the way, amateur radio WAS involved in that effort.

Hill didn't have a big "salesman" pitch. He isn't the type. He
tries...and doesn't make a big noise about it whether winning or
losing...but he generally WINS much more than losing. No blue
skies approach with ambiguous numbers and amorphous
statements..."here's what I think it can do..." followed by some
estimates which were based on lots and lots of past performance.

Now NONE of that model flying thing has any relation to ham
radio (other than ham radio being a help in it) but it DOES serve
to demonstrate that a purely hobby pursuit CAN do things...based
on the can-do types having shown that they can in the past.

So, you want "help?" When you can't even cite some stuff from
the Standard Atmosphere that's been around for longer than half
a century? Not likely from me.

No problem. PCTA extras have complete freedom of hypocrisy.

In here.

NCTAs must be absolutely, positively "correct" (according to the
PCTA extra code of ethics) or they are riverbottom scum (or other
nasty pejoratives).

In here.

It's not *odd* at all, Mike.

It's "The RRAP Way"

A line from an old Cosby skit comes to mind, imperfectly remembered, but
goes something like this:

"And there were these cavemen sitting in their
caves watching their kerosene powered TV's
by candlelight, muttering "They ain't never
gonna invent *radios*"'

Or the admonishment of Bokonon, from KVG's "Cat's Cradle"

"Beware of the man who works hard to learn
something, learns it, and finds himself no wiser
than before. He is full of murderous resentment
of people who are ignorant without having come
by their ignorance the hard way."

I'm not into baloons, but I admire the spriit of your project. Good
luck to you.

In my industry, we have a saying:

"If it happens, it must be possible"

>This is *so odd* - it's like trying to describe how an antenna works,
>yet getting bogged down by people that refuse to believe that we can
>extrude aluminum, that the government would allow people to talk over
>wireless connections, and besides, it is impossible for electromagfetic
>waves to travel through the air anyway.

When the ARRL sent Paul Godley to Great Britain in 1921 to listen for American hams on 200 meters, at least some of the professionals of the day said it couldn't be done. And they were right, in a way: They didn't know about ionospheric refraction, and that the model they used to predict signal strength at a distance for longer waves wasn't valid for 200 meters.

>At any rate, I am moving on with the project. If you choose to believe
>that Myself and others are not doing this, then have at it! 8^)

It occurs to me that the problems of cold and high altitude are interrelated. I don;t think high altitude *in itself* is a problem for most modern electronics (hard drives are a notable exception). The problem of high altitude operation is, I think, a *thermal* problem - "room temperature" thin air doesn't carry away enough heat, and components can overheat due to this lack. But if the thin air is forty below, it may be adequate with some insulation. Etc.

As for lifting capacity and other problems: They've obviously been solved before. Hydrogen may be usable - the package doesn't have any spark-generating components, and no humans are aboard. ("oh the humanity")

The only possibly-insurmountable problem I can see is airspace. And that's curable geographically. As in, you might have to go to Ohio or Indiana to launch.
Big deal - that's what minivans are for.

I wish you good luck and all success, Mike.

Not to mention Standard Atmosphere tables, models, etc. :-)

One is NOT going to reach 100 kilofeet altitude using 8-foot
latex weather balloons, regardless of the source.

If those could reach it, they would have done so long ago. Hint:
they aren't designed to reach way way up there to "near space"
altitudes.

>>overwhelming evidence that it can and is being done with regularity,
>>then I commend you in the strength of your belief. ;^)

Tsk. Mike is into the bad movie dialogue of years ago wherein a
bunch of kids in a barn would exclaim, "We can put on a Show!"
and the movie then cuts to many song and dance numbers which
are held on a much larger "stage" than could be put in such a
barn. :-)

"Will and idea" won't work by itself. A little bit of background into
the physics will be the baseplate of all future building (and flying)
decisions.

>> This is *so odd* - it's like trying to describe how an antenna works,
>>yet getting bogged down by people that refuse to believe that we can
>>extrude aluminum, that the government would allow people to talk over
>>wireless connections, and besides, it is impossible for electromagfetic
>>waves to travel through the air anyway.

Tsk. Mike is getting "odd" in the pique-ness of his complaints.

"Others have done it," so therefore Mike "can do it." Problem is,
Mike has not yet done it.

There's a big gulf between "others have done it" and actually
getting out and DOING it. Publicity releases made ahead of
time need the psychology of marketing to do an effective
selling job.

A case example is the website of the "Grand Challenge," the
autonomous vehicle "race" from Barstow, CA, to Las Vegas, NV.
Lots and lots of publicity ahead of time, all the entrants were
VERY confident, etc. NONE of them finished. Only about
a third of them managed to get started.

>> At any rate, I am moving on with the project. If you choose to believe
>>that Myself and others are not doing this, then have at it! 8^)

Fine. MIke, GO for it. Let us know when you've discovered how to
balloon things into the world of reality. It's your helium. Ought to
be a gas.

By the way I have a ping-pong ball size experimental load for you if you ever actually get past the RRAP bafflegab stage and do a launch.

Cockroachs are incredible little critters which reputedly can survive environmental extremes (temps, pressure) for short periods, on the order of a few hours. They're everywhere and finding a sturdy specimen is a no-brainer out in the landfills. When you're ready to go let me know and I'll grab one and name him "Leonard", package him properly for a trip to near-space and pass the package to you.

If you break 100,000 MSL we'll ship Leonard off to Sean O'Keefe at NASA so that O'Keefe can pin astronaut wings on Leonard.

Yup!

Interesting stats in the write up:

- Total QSOs reported: 1,326,122
- Increase of almost 200,000 compared to 2003.
- Almost 50,000 more CW QSOs
- About 22% more 'phone QSOs
- 20,940 digital QSOs = about 67% more than 2003 and a new record.

7-1/2 months to the next one!

Source record: 99725

A number of near space launches were not held this past weekend:

ASTRO-1 was not launched.

go here to see what they did not launch and did not do:

http://www.mae.okstate.edu/aero/astro/ASTRO-01/INDEX.htm

They didn't use a Kaymont latex balloon to not launch their 4.4 pound payload.

Some pictures of the payload and balloon that they didn't use to not launch are here:

http://www.mae.okstate.edu/aero/astro/ASTRO-01/ASTRO1%20Pictures/astro1_photo_gallery.htm

remember it's a long link, so pay attention to the wrap.

The launch, or not launch, was the first for this group, and they had some telemetry problems. From what telemetry was functioning, they estimated that they reached over 100,000 feet. All in all, not too bad an effort for no launch.

Other groups that were not launching this past weekend, and some that they won't be launching in the coming weeks:

http://users.crosspaths.net/wallio/ARHAB%20Launch%20Announcements.htm

These folks (SSOK) haven't been launching balloons since 1992:

http://www.petesias.com/balloons.htm

It appears the the Civil Air Patrol is not launching these things either!

http://www.capnspace.org/Missions/?dir=cns-001

Note that they had to delay the date that they don't launch their second mission to December 4th. Weird things happen when you don't launch these things.

The Civil Air Patrol effort looks like a *very* well done effort. Perhaps a model. I may contact the local CAP and see if they might be interested.

Mea culpas on the sarcasm, but this is just too weird.

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Technician - 205,394
Technician Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of November 15, 2004:

Novice - 30,012 (decrease of 19,317)
Technician - 264,784 (increase of 59,392)
Technician Plus - 55,204 (decrease of 73,656)
General - 138,500 (increase of 25,823)
Advanced - 78,283 (decrease of 21,499)
Extra - 105,918 (increase of 27,168)

Total Tech/TechPlus - 319,988 (decrease of 14,266)

Total all classes - 672,701 (decrease of 1591)

Yo for chrissake Mike, I just noticed this gem, 1500ï¿½C is 2732ï¿½F, over
a thousand degrees hotter than the melting point of steel!

. . WTF . . ?!

I don't know how to water this down so I'll be blunt about it. You
really do need to consider biting the bullet and delegating the
technical aspects of this project to some technoid(s) and stick to
being the head cheerleader. Preferably before somebody gets hurt . .

The W8CAL Marshall County, WV ARES bunch nailed 16th or 17th place, way up from near the bottom of the 5A pack. It would have helped if the four SSB stations could have averaged more than about 100 QSOs each. I dunno if N8NN and I are going to do it again next year. We may go back to having it out here as a 1B entry.

Yes, it was incredibly funny, yet there are those who think that there
is a lack of humor in r.r.a.p.

I like W3RV's idea. I thought it might be more appropriate to consider
naming the vehicle itself "Leonard" but I was advised that there is
already a gas bag with that name.

Mike,

The 1986 OH0MD/OJ0 team on Market Reef was really reluctant to let its balloon go so we tethered it with some light nylon cord with very light gauge magnet wire wound around it--enough for just about 5/8 wave on 160m.
The balloon stayed up for several days, enabling us to make the first ever OJ0 QSOs to North America on top band. We carried a helium tank with us. With the arrival of a very large storm, the balloon beat itself to death on the granite rocks.

The Ohio State University Amateur Radio Club, W8LT used a helium-filled kytoon for some years for supporting antennas in 160m contests. Old QST's from the 70's and 80's have photos.

The atmosphere does indeed heat up in the area known as the Thermosphere

If you don't believe me, here is some info from NASA. They give even
higher values as a maximum.

http://liftoff.msfc.nasa.gov/academy/space/atmosphere.html

and

http://en.wikipedia.org/wiki/Thermosphere

gives a nice explanation of the Thermosphere, and there is a bit of info
there as to why Amateurs should be interested in it.

A good question is "Why doesn't everything that passes through the
thermosphere burn up?" Because they don't. In fact, despite these high
temps, things passing through this region would "feel" cold.

Why should Hams know about the Thermosphere?

> I don't know how to water this down so I'll be blunt about it. You
> really do need to consider biting the bullet and delegating the
> technical aspects of this project to some technoid(s) and stick to
> being the head cheerleader. Preferably before somebody gets hurt .

Thanks for the bluntness Brian. I always appreciate it.

I will be likewise blunt. You are completely wrong about the people doing (or not doing) this. You *don't* understand some *very* basic things about the atmosphere, things that you should know as a Ham. Given those facts, I'll take your judgment of my qualifications to do this thing under advisement.

Be pissed or hate me, it's how it is.

Beta Users and advanced features Sign-up here...
http://www.eigensearch.com/inc/constructs/betasignup.htm

Central to eigenSearch Advanced is the freedom to construct complex search explorations, save the forms for later use; and apply weight factor to each phrase and term. EigenSearch processing will apply eigenvector math and Jacobian matrices to construct search terms that are tailored to your exploration. Cross-pollination is also applied as described below. The eigenvector approach is clearly highly advanced and would normally be useful for very sophisticated applications. Nevertheless, anyone may utilize the method. An advanced form is simply a matrix in which the user types words and phrases randomly in a multi-cell form (please click thumbnail to view).

Advanced features

EigenOperator (cross pollination) and eigenvector constructs
Cross document content pollination within every web site directory tree (unlike conventional search engines and tools eigenSearch checks for your terms and phrases and drills down though multiple directory documents)
EigenSearch cross-pollination is applied to documents within the same (tree) level in a URL (peer documents). Thereby limiting the amount of contamination of results
Illustration:
"Blood Hounds" + "English Breed" will present documents that contain either of these phrases within the same peer level in a document storage structure; for example, within the directory: www.smartdogs/hounds.
eigenSearch limits pollinating occurrences outside a peer level. For example; "blood hounds" + "English breed" found in two different directories would not report an eigenSearch result: i.e. "Blood hounds" found in www.smartdogs/hounds and "English Breed" found in. www.smartdogs/hounds/Europe would not be found. EigenSearch therefore searches

one tree (peer) level in a site and looks for multiple occurrences of multiple phrases across all documents within this peer level.
Corporate products can be tailored to drill down infinite levels for eigenOperator (cross-pollinating operator) matching.
eigenSearch single phrase results will find all documents and show the results as independent findings. This way the user can find results across many documents and the combined highly constrained results are reserved for a single level cross pollination. Extremely high (cross-pollinating) eigenValues will correspond to finely granular and refined search explorations.

Beta users receive the following features:
Login and password
Save search constructs for later use in your own personal construct tables
EigenOperator (cross Pollinating Operator) advanced features as described above (eigenvector to follow)
Database (Table) upload and eigenvector computations
EigenSearch seeks 300,000 beta testers for its advanced eigenOperator based cognitive engine. This engine will allow for a multiplicity of search parameters for users to select so as to mathematically narrow results. The system will employ eigenVectors, eigenValues and eigenMatrices to determine relevance to user searches; thereby rendering high fidelity confirmed search results.
Naturally the computational power for doing such math is why beta testers are required. Each tester is welcome to comment on user friendliness, speed, change and ergonomic elegance. It is an eigenSearch goal to continue advancing the user interface so as to remain intuitively simple to use while at the same time providing hi-fidelity explorations. All beta testers will receive a login and password, which provides entry into features for saving search constructs and parameters according to their own classification approach. Saved results and parameters can be used at any time and modified to alter search results. Beta users will be able to import their own data sets (2-dimentional) and perform an eigenValue analysis.

Remeber when I said that the FCC had "future enforcement
actions" with K1MAN? Here's the most recent letter to the guy from
Riley:

October 29, 2004

Mr. Glenn A. Baxter
RR 1 Box 776
Belgrade Lakes, ME 04918

RE: Warning Notice: Amateur Radio license K1MAN
Case #EB-2004-07

Dear Mr. Baxter:

On September 15, 2004, we notified you that we had received
approximately a dozen complaints that your Amateur radio station's
transmissions started while the communications of individual operators
and groups such as the Salvation Army Team Emergency Radio Net, which
was handling health and welfare traffic for this season's hurricane
victims, were ongoing. The letter cited an April 14, 2004 warning
issued to you about your transmissions starting while existing
communications were ongoing, and warning you that your publishing a
"transmission schedule" does not give you the right to begin
transmitting on a certain frequency at a certain time if there are
ongoing communications on that frequency.

Pursuant to Section 308(b) of the Communications Act of 1934, as
amended, 47 U.S.C. Section 308(b), we requested you to respond to the
letter within 20 days from receipt certifying: 1) what action(s) you
are taking to correct the deficiencies in the operation of your
station; and 2) specifying what method of station control you have
implemented for your Amateur radio station transmissions.

Your response dated October 14, 2004, in which you stated that "No
corrective actions are necessary at K1MAN" and "No changes are needed
with regard to station control..." failed to furnish the information
requested by the Commission.

In addition to the above mentioned complaints, we have received
additional complaints of interference from your station's
transmissions starting at 9:31 PM on 3.890 MHz on October 16, 2004;
6:23 PM on 3.800 MHz and 7:59 PM on 3.977 on October 19, 2004; and
7:59 PM on 3.977 MHz on October 20, 2004. We also note that, according
to your web page, your station now transmits on 14.275 MHz from 11 PM
until past 6 PM the following day.

We are affording you an additional 20 days from receipt of this letter to furnish the information requested in our September 15, 2004 letter.

Additionally, pursuant to Section 308(b) of the Communications Act of 1934, as amended, you are requested to provide the name, call sign, and address of the control operator(s) on the additional dates and times mentioned above (9:31 PM on 3.890 MHz on October 16, 2004; 6:23 PM on 3.800 MHz and 7:59 PM on 3.977 on October 19, 2004; and 7:59 PM on 3.977 MHz on October 20, 2004), and to describe the method of station control used each time the station was transmitting. You are also requested to furnish that information for the 19 hour transmissions recently begun on 14.275 MHz.

In an inquiry of this type we are required to notify you that a willfully false or misleading reply constitutes a separate violation made punishable under United States Code Title 18, Section 1001. Failure to reply also constitutes a separation violation of Commission rules.

CC: FCC Northeastern Regional Director
FCC Boston Office District Director

It sounds like QRZ isn't the only organization that's about to take Baxter
off their list. Let's see, how many decades did it take to do the obvious?

If I were to choose to make a website that has every ham with my last name, that is my option. If Mr. Smith is pissed off that he is not on the Bushong web site, screw him.

Fred at QRZ can do whatever the hell he wants. It is that simple.

If you want the facts, go to fcc.gov. If you want editorial, go to qrz.com. I think it's pretty simple.

If you are pretty simple, maybe you shouldn't have a computer.

Not kidding, and to be honest, I wasn't gloating, just
establishing a reference point.
OK, I can understand if you're a K1MAN supporter and I'm not
even going to question that right of yours, but, if you got some flame
against me for relaying an enforcement letter that leads this Ham to
believe that Riley's about had enough of K1MAN's alleged flaunting of
FCC regulations and the interference that he has been alleged to cause
to the Boy Scouts and others, then, do so. It's public knowledge that
there's a lot of people that are upset at K1MAN. There were 45 pages
of comments on QRZ.com and the vast majority basicalloy said that QRZ
was within their rights, and that Glen Baxter should take a hike.

Excuse me, buddy...What you got against me? All I did was
post yet another enforcement letter from the FCC. That's in the
Public Record. If you doubt it, look at the ARRL site for the exact
letter.
Listen...I don't appreciate being flamed for doing what I feel
is the right thing and that this group needs to know. This group
isn't rec.radio.amateur.flamers, it's rec.radio.amateur.policy and
that tends to lead me to believe that discussions on policy issues are
relevant information, not to flame anyone for relaying the info.
If you got nothing even neutral to say, please remain quiet,
the group will appreciate that and future flames will be ignored.

I had a feeling that Riley would not accept K1MAN's reply, and
this does indicate that Riely's about had it. The impression I got is
that he's patient, to a point, then, if his patience runs out with
someone, then, things get very uncomfortable.
I suspect that the next series of emforcement letters won't be
asking for an explaination, but, more along the lines of a NAL telling
him to caugh up a decent amount of dough, or maybe accompanied with an
in rem seizure. But, I'm not going to second-guess the next move as
that's up to K1MAN.

A reference point? Damn dude, everyone saw what was coming, you're no
Nostradamus. We don't need an "insider" to keep us up to speed.

> OK, I can understand if you're a K1MAN supporter

Sorry to burst your bubble, but I'm not a K1MAN supporter. I also feel
what ND8V and WD4AWO are doing by jamming warrants letters from Riley
also. 2 wrongs don't make a right.

and I'm not
> even going to question that right of yours, but, if you got some flame

You know, as well as most on here with an open mind, that the Boy Scouts
were setup to take the fall. If you can't see that, you're blinded with
rage about K1MAN. Keep in mind, I'm not a K1MAN supporter.

then, do so. It's public knowledge that
> there's a lot of people that are upset at K1MAN. There were 45 pages

So what if there were 45 pages at QRZ, big deal! QRZ doesn't make the rules, or enforce the rules. QRZ is a private web site, and Fred can run as he sees fit. If he wishes to conduct meaningless polls on his site, that's his business. The opinions of others, does not influence my position on K1MAN.

If, and I say IF, K1MAN is indeed in violation of the current FCC rules, they will deal with it. Not Mikey, Bobby, you, or QRZ.Com.

I heard Fat Mikey say on 14.272 today, to another ham, if you don't like what he (ND8V) is saying, spin the dial. Fat Mikey should heed his own advice. Pot, kettle, black.

Of course, but 85Km out is ~280,000 MSL and the few atmospheric
particles and manmade *objects* which exist or pass thru that
altitude can get radiation-heated to pretty high temps. The temps of
the space *between* those particles and objects however is 'way down
the Kelvin scale. Your stated goal is 100,000 MSL which is only 30Km
out where all objects and particles are bloody friggin' cold no matter
what as the density of the atmosphere increases and blocks radiation
heating from the sun and conduction and convective cooling
increasingly prevails vs. radiation heating/cooling. So what's the
point to your geting into what's up at 85Km since a balloon ain't even
gonna come close to bobbing up to 85Km?

If your payload capsule is engineered properly for an ascent to FL 100
and back down Leonard will be OK which is really what matters. Back to
auditing a Heat Transfer 101 class for you Good Buddy.

> >

Cool off and settle down Mike, I'm completely incapable of getting
pissed off much less hating any USENET poster. Particulary in this
off-the-wall ham radio based collection of particularly Odd Units.
Stick yer head up and sombody is gonna snipe ya for jollies and ya
handle it. So leave yer thin skin home and duck when you post here and
welcome to RRAP where pud-yanking is the name of the game.

That's how it is.

'Cause it's hot? ;-)

>You *don't* understand some *very* basic
>things about the atmosphere, things that you should know as a Ham.

This whole thread got me thinking about how balloons work and how much helium
costs and such. One thing I found out is that 1000 cu ft of helium can be had
for about $200. A bit of $$ for an individual launch but not much if split up

amongst a group.

Another thing was the lifting power at high altitudes and low pressures, and the concept and behavior of a balloon open at the bottom that's not filled all the way with gas. Fascinating.

Dan - While I agree with the thought, I do need to correct you. Baxter's affected first name is spelled "Glenn." I.'m sure all the Glen's of this world would appreciate the disassociation of their name with this rascal and would like you to use the correct spelling of his name. Rest assured, we all know of whom you are discussing, so the spelling is a trivial matter. I hope this doesn't start a large number of court petitions for name changes from Glenn to Glen after the FCC finally takes action and Baxter makes the news.

Oh gawd, yes, Brian! This whole thread got started when I mentioned
that I was putting together this operation in response to Hans' telling
us about how Amateur radio is being marginalized. Then it turned into me
trying to tell the group about what we were trying to do amidst a couple
people that don't believe it can be done.

But since you were talking about the effects of the cold, I thought I
might point out just how weird things are "up there".

And it is hot in the neighborhood of the ionosphere.

I apologize Brian. Call me incompetent any time you like. It was a
mistake to bring this subject up in here, I'll admit that.

I bring my hockey mentality in here most of the time. This was too much
of a crossover into my professional mentality. And it is apparent that
it won't be differentiated.

So I guess it's back to talking about the Morse code test! 8^)

2007. K1MAN Info

Newsgroup: rec.radio.amateur.policy

Baxter has been bad news and useless QRM on the radio bands for decades.
Nothing more, perhaps less.

ak

EXAMPLE:

September 12, 1989

Hamilton, HM EX
Bermuda.

Mr. Ralph Haller,
Chief, Private Radio Bureau,
Federal Communications Commission,
Gettysburg,
PA 17326,
USA

Dear Mr. Haller,

It was a pleasure to meet with you at the IARU Region II Conference, in
Orlando, Florida, last week. I appreciate the time you took to listen to the
problem, which we in Bermuda have been living with for the past few years,
and also agreeing to reviewing the enclosed documentation.

Further to the letter from the FCC, from Mr. Robert H. McNamera, to Mr.
Robert S. Ross under reference 7240-F, I feel that the transcript of the
tape I have done which is enclosed under reference DOC K14/89, is proof
enough that third party traffic was indulged in where he states "Covered by
FCC rule 97.113C Associated Press questions were answered in detail by VP9--
over the net." At no time did he ask my permission to relay any of this
information and I was unaware that I was on a 'phone patch. Some Bermudians

who were in the Boston area stated that they heard my report over the radio, with my voice being broadcast as a result of my operation on the Bermuda Emergency Net. I do have tapes which we can arrange for copies to be made, but I do not wish to bore you with four hours of tapes, but if it is necessary, so be it.

As you may know, whilst at the Conference, the Honorable Patricia Dennis wished to meet with me because of her impending holiday in Bermuda. I have met with her and her family and we have discussed the above matter. I will be copying this correspondence to her so that she will be as fully informed as your good self.

We have attempted to get this matter resolved with K1MAN, ARRL, IARU etc but without any success. As you will see from DOC K3/88 he quotes the FCC ruling on frequency co-ordination as per the second paragraph. He broadcasts one hundred and thirteen times per week and his main reason for doing so is to keep the frequencies clear for when he wants to get on the air. I have a tape where he admits to doing this and agrees that he upsets various nets.

In DOC K7/88 he asks 19 questions about how we operate and this is the reason that I did not reply to his letter, not because of the correspondence I have had with ARRL. As amateur radio operators, we In Bermuda have a very friendly net which is not "hereby co-ordinated" by some rule or other. You will note from DOC K8/88 that the ARRL do not agree with his concepts.

I sent a report to "QST" on Hurricane Dean, (DOC K12/89) which I can assure you is factual. More people need to know what went on because if they listened to the broadcast (DOC K14/89) they would be totally mislead. I did a response on the Bermuda Net (DOC K15/89) and also read it out to other parties who were interested. K1MAN has agreed to broadcast a tape if I sent him one but he is then going to do a rebuttal, and this will not get anyone anywhere!!! I have taken the matter up with the Department of Telecommunications (DOC K16/89) and will be pursuing this also through the American Consulate General.

DOC K13/89 was sent to me by Mr. R. Ross the day after Hurricane Dean and as he says "I was totally incensed by the actions. ....."

DOC K19/89 shows that the IARU Region 2 Executive Committee have considered this as a result of the letters DOC K9/89, DOC K10/89 4 DOC K11/89 but basically are loath to interfere in another countries activities, if it can be settled otherwise. Resolve 2 in DOC K20/89 was passed and therefore each country will be responsible for its own emergency nets unless a request is made to the contrary.

I regret that this letter is rather long and that there is so much additional information. However, the Bermuda Amateur Radio Operators would be most grateful if this problem could be resolved.

In a recent conversation we had with KAMAN he stated that any Novice could broadcast 24 hours per day on 28MHz if they so wished. As I stated in DOC K11/85, page 2 paragraph 3, that if a small minority decided to broadcast from every country, the bands would be full and QSO's as we know them would

not exist.

Many thanks for listening at Orlando and for reading this. I look forward to your reply,

Yours sincerely,
[Tony - -, VP9--]

c.c. Hon. Patricia Dennis, FCC Commissioner

If it wasn't hot, we wouldn't have the ionization that allows us to
communicate all over the world on HF.

And of course you don't need that much per typical launch.

Those balloons get BIG before bursting. I've seen some video of it. I
haven't seen what happens to the form of the zero-pressure balloons,
though. Certainly the zero-pressure balloons are a fascinating example
of a self regulating system.

Maybe I'm nieve(sp), but I thought the guys at W1AW would
move up or down the band some to avoid QRMing someone
(that they can hear, there is a rule saying "listen before
you transmit"). Hams know to look up or down the band
if they don't find W1AW on the expected frequency.

I've been in RTTY QSO, when W1AW came on, and wiped us out, so no, they don't always listen.

The problem I have is there are about 3 to 6 so called "hams" that hang around MAN's published frequencies waiting for his broadcast to start. Then they start bitching about MAN QRM'ing them.

The main problem on 20M is Fat Ass Mikey ND8V, and dumb ass Bobbie WD4AWO, not K1MAN.

Keep in mind, I DO NOT support K1MAN, but at the same time I damn sure DO NOT support what the Tennessee Toilet Tick (WD4AWO) and the Kalamazoo Cuckoo (ND8V) are doing either. If Mikey and friends don't like what is going on, on 14.275, well like Fat Ass Mikey likes to say, "Turn the damn dial".

Make that "CBer." There are no jugheads in the amateur service. 8^0

I was a forecaster for a "round-the-world" balloon venture. They lost
their helium due to a fabric tear. Couldn't find enough replacement
helium in Argentina.

Friend of mine had a hydrogen generator for launching balloons on
Antarctica. I guess it was cheaper/less weight than hauling in
helium.

Surplus catalogs used to sell the little generators but haven't seen
them in years.

I wouldn't count on it. Maybe CAPman can fly by with a skyhook and
snatch the descending package before it becomes FOD for the General Av
types?

Anyway, this entire thing is highly doable as it's already been done
by amateur radio operators for at least a decade.

Then there are all of the high-power amateur rocket types who
regularly get FAA approval, have telemetry, and a good set of binocs.
I participated once with another amateur and they were thrilled with
our ability to communicate from the launch area to the pick-up area.
Today, FRS and cell phones can probably fill that niche. Ooops!

>Those balloons get BIG before bursting. I've seen some video of it. I
>haven't seen what happens to the form of the zero-pressure balloons,
>though. Certainly the zero-pressure balloons are a fascinating example
>of a self regulating system.

With a closed rigid balloon (like the Hindenberg), the lift gas is at constant volume, so the lift decreases with higher altitude and lower barometric pressure and the maximum altitude is relatively low.

With a closed elastic balloon (like a stretchy latex balloon), the lift gas can expand to a certain degree at higher altitudes, but must be at somewhat higher pressure than the gas outside (because the gas inside must exert pressure on the balloon walls to stretch them). With a very stretchy balloon, the decrease in lift will obviously be much less than with a rigid balloon.

With an open-at-the-bottom balloon (like a bag from the dry cleaners), the lift gas need be only at a very slightly higher pressure than the gas outside (because the gas inside must support the walls of the balloon/bag). With a bag that is much larger than the volume of gas at launch, the decrease in lift will obviously be much less than with a rigid balloon or a stretchy balloon.

Look at the W1AW weekday schedule:

Simultaneous CW bulletins on 8 different frequencies 3 times a day

Simultaneous RTTY bulletins on 7 different frequencies twice a day

Simultaneous SSB bulletins on 8 different frequencies once a day

Simultaneous CW code practice on 8 different frequencies 4 times a day (except Monday when it's only 3 times a day)

W1AW has scheduled transmissions for 44 hours a week.

73 de Jim, N2EY

W1AW transmits CW, RTTY and SSB bulletins

Mike, be nice.

I think you have a good project, and cannot understand why all these "movers and shakers" of RRAP keep poo-pooing the idea. Maybe they are paper tigers, code-tape Extra's, or just plain old windbags themselves. Anyway, you have several of them in your backyard and I haven't seen a single one throw in with you yet (but then I haven't read all of the blabbering). Speaks volumes.

:((

My best advice is to associate the project with a Scouting Troop/Venture Crew, or H.S. honors science class, etc, find a handful of sponsors (easier when you have the scouting affiliation), and find some motivated no-code Techs who aren't afraid of a challenge, or maybe don't know enough to get out of the way.

;))

FWIW, the military has standing orders to assist the Scouts wherever they can. They might be helpful in many ways, from lodging to launch location to weather support. You could make a request to the Air Force Weather Agency to have a Support Assistance Request (SAR) in place to run the trajectory model and predict the final resting place of your package (you supply launch time and ascent/descent rates), preposition your recovery team in that vicinity, then adjust as real-world conditions dictate.

Have Fun and Best of Luck, bb

He still thinks you are calling him "Jimmy." How awful. We should
call him "James" as he gave his name as "James" to the FCC.

Oh, oh. It starts.

The "medical professional" now starts to paint the picture that D is a
danger to society. A phone call is made to some official, some where.
A file is started. An entry is made.

> You're not Peter Pan, Dieter, and you'll HAVE to grow up EVENTUALLY.
> Please try to do it without hurting anyone along the way.

There it is again. The insinuation that someone will be harmed unless
D bends to his will. A second notation is made in the file. The file
gets thicker.

> File your charges or shut up, Stussy...you're boring us.
>
> Steve, K4YZ

Good grief. Steve has given D an ultimatum. D must either file charges or shut up. If he continues to just gripe, the file will grow and "The Man" will come and take him away.

Bob - Perhaps the ARRL has an update to their position in 1988.
ak

From ARRL to the Bermuda ham representative,
copied to Baxter, the IARU Secretary, and the FCC.

May 13, 1988

Rather than wait to have you ask, I thought I should provide some
clarification of the letter dated May 4 that you have been sent by Glenn
Baxter, K1MAN.

Mr. Baxter states, "Our amateur broadcast practice 1s Identical to that of
W1AW." I believe he is referring to the practice of transmitting bulletins
without first ensuring that the frequencies to be used are clear of other
amateur communications. As has been discussed on occasion In QST, W1AW
transmits simultaneously on eight frequencies 1n as many amateur bands. The
bulletin transmitters are crystal-controlled, a limitation we hope will be
remedied shortly. The number of frequencies being used simultaneously, and
the technical limitations of the equipment now in use, make it impossible to
adjust the transmitter frequencies before a bulletin is to be transmitted;
the need to adhere to the published bulletin schedule precludes delaying the
broadcasts until the particular frequency is clear.

However, we are not unmindful of the need to minimize the impact of bulletin
transmissions upon ongoing amateur communications, particularly in the
crowded voice subbands. To that end, except in the event of a communications
emergency, voice bulletins are transmitted only twice a day by W1AW and are
limited to just a few minutes; the exact length of the bulletins depends on
the amount of news to be conveyed. Bulletins are not sent simply to fill out
a predetermined length of time.

I believe it 1s fair to say that our understanding of Section 97.113(d)(2) of the FCC Rules is somewhat different from Mr. Baxter's. This Section, which explains one of the exceptions to the general prohibition of broadcasting in the Amateur Radio Service, provides that "Information bulletins consisting solely of subject matter relating to amateur radio" are not considered broadcasting. W1AW operations conform to a narrow interpretation of this provision.

Accordingly, IARN and W1AW practice are far from "identical."

Finally, I should mention that there is no recent "FCC ruling" having any relevance whatsoever to "frequency coordination" outside of the bands available for repeater or auxiliary operation. It follows that no one has "authority" to perform such coordination in the name of the FCC or, for that matter, any other entity. Cooperation in the efficient use of the limited amateur spectrum is essential, but by definition, cooperation is not a one-way street.

73,
David Sumner, K1ZZ
ARRL Executive Vice President

Mike, my point was that you have two folks with a fair amount of
knowledge and experience taking the time to give you feedback. They
aren't saying that you're nuts to be considering doing what you intend
to do, but they are offering you the benefit of their understanding of
engineering and physics as it pertains to your project.

If they are missing something (and me too, perhaps - this sure ain't
my area of expertise either!), then by all means show them where
they're wrong - but they are both pretty intelligent, educated and
knowledgeable guys, with years of real-world experience in their
fields - maybe worth at least a rational discussion? Or you could
throw a bunch of web references in their faces and get angry....

Your call.

Leo,

There is a world of difference between someone like Jim, who questions and looks at my answers, and one member that says what I am considering is impossible, and yet another that calls me incompetent.

And there is a lot of difference between me illustrating my points wit web references, and finally getting annoyed after I am called incompetent.

Considering that to Len, this is an impossible task, and that Brian Kelly has thinks I'm an idiot that is only suited for cheerleading, I would have to say that they probably don't have anything to offer me in my doomed project with which I am going to hurt someone.

My call.

In the past I have called "Jim" (or "Jim") by "Jimmie" or "Rev. Jim."

Both of those forms are "insulting" to him. Tsk. No more the
use of "Rev. Jim" despite his Sermons on the Antenna Mount.

No more calling "Jim" (or "Jim") "Jimmie." Can't be "insulting"
any of the high-level radio gods by getting familiar. No sir! All
shall be FORMAL. NO familiarity use by ordinary mortals!

I might even use "James P."

On second thought, that might also be "insulting." :-)

>Your call.

Sigh...there will be NO "rational discussions" in THIS newsgrope
by PCTA with any NCTA. Hasn't been before, won't be ever until
the last code key is pried from cold, dead fingers. :-)

There have been - literally - millions of balloons lofted carrying radio transmitters to high altitudes. Very, very few of those made it past 50 kilofeet altitude...they weren't designed to do that and part of that design-for-meteorology-by-metrology used ground-level helium-filled closed balloons.

Basic information needed for any "manager" of this kind of thing is the Standard Atmosphere data. [easy to get] Information on the millions of radiosondes and (now) rawinsondes takes more digging (it's of little interest to most other folks) but it's out there. Next would be basic gas costs and what is required to get from the supplier's bottle (costs a helluva lot more if the container is not returned, empty or not) to the balloon itself. That's the cross-over between work-that-must-be-known-and-done and task logistics. The "manager" must eventually integrate all the on-board equipment, cross-check that against lifting capability and make sure that someone has checked operation VERY close to launch. There has to be some kind of tracking of the balloon flight and (unless one has a spare half-million-dollar optical tracker) it is going out of sight in about ten minutes or maybe 15 even with 10 power binoculars. Supposedly the on-board GPS is doing that tracking and reporting back accurately...but what if it suddenly went non-operational? There needs be a procedural back-up.

Now, if the name of the game is Actual Amateur Experimentation, then the "manager" ought to be able to sweet-talk his way into getting his own experiment on board one of those already-proven ham balloon flights. But, that may be defeating the whole object of this blue-sky to near-blackness-of-space pipe dreaming... the "manager" won't be manager any more and his name can't head the list of experienced done-it-before types doing the actual flight.

Or, the project proposals for all this are pure pipe dreaming which cannot Ever be negatively criticized without getting someone very outraged for ANY sort of critique except high-fives. Dreaming about something is fine. DOING it is quite another. Getting outraged at not being psychologically sugar-boosted happens all the time in here, realized by most but never by the proposer. :-)

Tsk.

>
>Maybe Kelly could diagram one on the back of an envelope for us?

I've made them. They weigh about a half ounce or so for
1-foot sides (good for reflections down to transponder
frequencies of 1.1 GHz and up to X band. Little ones for
X-band (and some C band) search/weather radar can be a
few inches on the side. Balsa wood strips for the edges
and ordinary kitchen aluminum foil for the reflector.

Corner cubes are extensively used in optics/laser benches.
Those are just three planes of reflectors, each perpendicular
to the others. No matter the azimuth or elevation of the
source, a reflection goes back on the same direction vector.
Ideal for a positive radar return in any azimuth or elevation.

>> According to Mike, the FAA is "accommodating." :-)
>

Not quite. The USAF launched this one I had in the mid-1950s.
Guess where? :-)

They used a tracking radar receiver on the ground and recorded
the telemetry frequencies (of the rep rate) for altitude, temp,
and humidity. Azimuthal accuracy was as good as the boresight
of the tracking antenna (with some corroboration of altitude by
tracker's elevation at close ranges).

> All of that went in the dumpster long ago except the
>> translucent plastic sleeve on the Xmter assembly went two weeks
>> ago (found it in a box of junk after sorting out the workshop).
>
>Best place for all that stuff.

Perhaps. :-) RCA's tube works had a steady producion of
pencil triodes with crimped-on cavities formed by thin sheet
metal. They made millions of units over a couple decades.
Was a fairly cheap combination tube & cavity.

Those same pencil triodes were later used in a small boat
radar unit made by Bonzer. Flattened disk kind of radome,
had a planar array of helix antennas inside. A few miles range,
good for very small boats.

weather balloons." [that was his original statement and, by Rules
of Engagement in this newsgrope, he MUST follow that EXACTLY
or be termed a "failure" or "defunct"]

Descent much faster. :-) That weather balloon will probably
go POP before 50 kilofeet.

[someone finally noticed that those balloon things filled at near
sea level DO get rather BIG at high altitude...like, no kidding?]

It's high school chemistry time. Electrolysis...separate oxy and
hydrogen from water via electrickery. Takes a while for any sort
of H volume but that can be automated. Water cheap, electricity
relatively cheap. [some hams extremely cheap...[

A large budget bump there...CAP is unlikely to pay for the
snatch aircraft fuel, maintenance costs, etc.

>Anyway, this entire thing is highly doable as it's already been done
>by amateur radio operators for at least a decade.

Well, YES, it has. Thing was that Mike was making out like it was
something "new" in going to "near space!" NOT with surplus latex
weather balloons he aint. A mylar or other polymer film gasbag,
yes, but the ground support for anything sizeable is going to be
MUCH larger than realized for that "near space" altitude.

>Then there are all of the high-power amateur rocket types who

This reads like the story of your entry into amateur radio, Leonard. Dreaming about getting that ticket is one thing. DOING it is quite another.

Mike will likely see "Leonard" at 100k feet before you obtain an amateur radio license.

Happy psychological sugar-boosting and message knuckling to you.

Remember, too, that the balloons Mike is considering obtain their lift from
helium (a noble gas) rather than hot air.

The websites offer a lot of evidence that it can be done, has been done and
even how to do it.

A good idea, Brian. I've made a few presentations on other subjects
with the scouts, and it has been a lot of fun.

Steve, K4YZ

2038. Do I really need a license from the FCC

Newsgroup: rec.radio.amateur.policy
Date: 2004-11-18 18:06:13 UTC
From: adguillen@gmail.com
Message-ID: <c2f63512.0411181006.2f006d0a@posting.google.com>
Source record: 99936

I just bought two Uniden GMRS 2-way radios for $20. I plan to use them while shopping in the mall and while out playing paintball. Do I really need to get an $80 5-year license from the FCC? What does the license protect against? Its not like I'm given my own frequency.

Thanks for your help

Good Troll! And of course you have come to the right place
to get a reaction from a swarm of screwball ARRL ham operators
fresh off the CB and now rule abiding no code techs.
LOL

> And of course you don't need that much per typical launch.

I'd seriously consider using hydrogen instead of helium. Hydrogen
would be a terrible choice for use in party balloons but in a
controlled situation like this outdoors and handled properly hydrogen
can be used quite safely. Hydrogen is used in large volumes throuhgout
the industrial sector and it's being used in experimental hybrid
vehicles. If the pros in the auto biz don't have a show-stopping
problem with hydrogen being used as fuel for the interstate kamikazis
neither do I. Propane is nasty stuff too but propane-powered vehicles
have been out there for 40-50 years.

I believe it's much cheaper than helium.

With hydrogen you wouldn't have to inflate the balloon as much to get
it airborne which in turn means that the balloon would be able to fly
higher before it pops. "Higher stretch ratio", etc.

Allowing you to buy a radio that requires a license, but not requiring you to have or buy the license before purchase makes as much sense as selling high powered amplifiers to CBers without requiring them to show evidence that the buyer is licensed for its use, or at least willing to sign a statement that they understand they must have a license before using the amplifier on the air. (The statement should have the buyer's address as well, and list the penalties for illegal use.) It's almost like the government doesn't care, isn't it? And such laws come from the same group that raids the funds put away for social security and generates deficit budgets. Does the FCC care about the license? Probably only if they get a complaint about how you are using it. Anyone know what the fine might be??

Unlicensed operation can be fined as much as $10,000. So $80 for five years
is a pretty cheap to insure that one doesn't get fined for unlicensed
operation.

Me. Not to FL 100 but close enough RRAP purposes. The Maryland state
enviornmental agency and NOAA operate remote contolled air sampling
and WX monitoring stations at the air field where I based my
ultralight in Harford County. The state recruited volunteers who were
regulars at the field to fill and launch balloons they supplied as
kits for assembly and launching on specific dates at specific times
over a period of a about a month.

1990 or so. I volunteered and was involved in three launches. A state
guy conducted a two-hour meeting at the field during which us
volunteers were taught hands-on how to do the assemble, test and
launch work.

The drill was to unpack the kit, lay everything out on the overrun
grass off the south end of the turf runway, hook it all together,
inflate the balloon and tie it down. At this point the electronics and
batteries were checked out by sending a system test routine to the
ground station rcvr. There were zero failures at ground level on 20 or
so missions from that airport. There was one inflight failure at some
very high altitude according to feedback from the state.

Usually a 2 or 3 man crew per launch was involved, two out on the
grass and one in the FBO office who dialed FAA Leesburg, announced the
launch then got on the local UNICOM freq and broadcast a "balloon in
the air" alert and our job was over that day.

The payload instruments inhaled and analyzed air samples at various
pre-programmed altitudes. The payload radio shipped the analyzer
output data back to the ground station which was networked back to the
agency group doing the studies via a dedicated phone line. They also
had other networked rcvrs scattered around the state listening to the
payload radio for backup purposes.

You've finally done it. I have an old-fashioned analog trollometer. It spun around three times and the needle fell off!

Best regards from Rochester, NY

Why should that matter? You yourself have posted on many topics where
you have no empirical experience, just your own knowledge and various
articles that you have read......including this one! A lack of
hands-on experience has not held you back......why should it apply
differently to others?

Amazingly enough, the laws of physics are absolute. Paper airplane,
high speed jet , spitball or balloon - the same physical laws apply to
all. Just like you learned in engineering school.....(?)

No special dispensation is available for good intentions, amateur
radio or raw motivation and determination - they are absolute.

I respectfully suggest that you've been too busy (once again)
focussing on the poster rather than the material posted. Jim, whether
you happen to like or agree with the messenger or not, the laws of
physics could care less! They remain absolute.

The trick here is finding a way to accomplish the task within physical
law. In engineering, this requires a rigorous analysis of all facets
of the problem at hand - a list of problems impeding the design goal
is developed, and solutions are proposed for each until all have been
satisfactorily resolved. The posts that we saw earlier were the
beginnings of the issues list - responding to it with "it's been done,
it'll work, no problemo!" - type platitudes ain't going to resolve the
issues - it's just wishful thinking. Or perhaps no thinking at all.

>>
>> My call.

>>
>The websites offer a lot of evidence that it can be done, has been done and
>even how to do it.

Of course it has been done - duh! The issue here is simply how the
various obstacles standing in the way of success have been overcome.
Referring folks who raise technical concerns to a pile of websites
merely demonstrates an inability to articulate the technical knowledge
that is ultimately required to accomplish a plan such as this. Makes
one wonder ho deep an understanding one would possess to reply in this
manner! I'd suspect not too deep.......not much past the "sounds
pretty cool!" stage of the project).

One can read on various websites a plethora of interesting scientific
information - actually doing it is quite something else. The plans to
construct an atomic bomb take up but a few pages on the Web - but
actually building one might be just a bit more difficult than the
relatively simple documentation would lead one to believe......lol!

If Mike was not interested in discussing this topic at a detail level,
then perhaps it was a bit unwise to post it in a public newsgroup -
unless there was some other reason for doing so......? Wonder what
that might be.....! hmmmmm - Rah Rah Rah, Sis Boom Bah......
y'think?

Of course, Jim, you could step up to the plate and use your vast
knowledge of engineering to articulately respond to each of the
problems and issues raised, educating us all as to why they do or no
not have a bearing on this project........

.....Didn't think so.

Sad indeed, but true! Of course, it's far more important to make a
concerted effort to bash the messenger rather than analyse the essence
of the data presented in the message - that's how this thing seems to
work......!

What experience do either of them have launching radio-carrying balloons to
100,000 feet or more?

>And you, of course - cheerleading for Mike, as usual.......

You said "two folks who have a fair amount of knowledge and experience". I
would make three - except I claim no experience in high altitude ballooning at
all.
>

Is there something wrong with expressing a positive attitude towards the idea,
and offering encouragement while *simultaneously* pointing out where the
problems may be?

Of course.

>Just like you learned in engineering school.....(?)

I also learned that preconceptions are often wrong and so are models based on
inadequate information and a lack of understanding of *all* the relevant
physics. This has been proven time and again in the history of engineering.

>No special dispensation is available for good intentions, amateur
>radio or raw motivation and determination - they are absolute.

What laws of physics absolutely prevent Mike from succeeding? From what I've
seen and calculated, his main limitation may be airspace regulations here in
EPA - a place where I do have some empirical experience.

>>>> They
>>>> aren't saying that you're nuts to be considering doing what you intend

Engineering 101, freshman years stuff.

>The posts that we saw earlier were the
>beginnings of the issues list - responding to it with "it's been done,
>it'll work, no problemo!" - type platitudes ain't going to resolve the
>issues - it's just wishful thinking. Or perhaps no thinking at all.

No, it isn't.

When an attempt is made to do something for the first time, there's always the possibility that it simply cannot be done, or cannot be done with the available resources. Or that there are factors no one has considered.

But once a thing is actually done for the first time, it's a different ball game completely, because now we *know* it's possible.

Classic example: In the very early 1920s, the very best knowledge of the physics of radio waves predicted that it was *essentially impossible* to communicate across the Atlantic with the power levels, wavelengths, antennas and receiver sensitivity then available to amateurs.

The problem was that the models used did not take ionospheric refraction into account. And so amateurs showed it could be done, and soon the "shortwaves" were in worldwide use.

Now I'm not saying that the physics of ballooning isn't well understood! I'm just saying that since it has been done already, some of the commentary against Mike's idea rings very hollow.

>>>> If they are missing something (and me too, perhaps - this sure ain't

>
>Of course it has been done - duh!

Tell it to Len.

>The issue here is simply how the
>various obstacles standing in the way of success have been overcome.

The first question is if they are obstacles at all.

I recall commentary on how expensive helium allegedly is. Then I did a little research and found that it's about 20 cents a cubic foot when bought in quantities of about 300 cubic feet or greater. So for a thousand-cubic foot balloon, we're talking maybe $200 worth of helium. That's a bit of money but not a showstopper.

>Referring folks who raise technical concerns to a pile of websites
>merely demonstrates an inability to articulate the technical knowledge
>that is ultimately required to accomplish a plan such as this.

How?

The websites show what has already been done. By *amateurs*. Their methods and solutions form a starting point.

One thing I learned in engineering school was not to reinvent the wheel.

>Makes
>one wonder ho deep an understanding one would possess to reply in this

If it doesn't "sound pretty cool", why do it at all?

>One can read on various websites a plethora of interesting scientific
>information - actually doing it is quite something else.

That's my point.

Who should have greater credibility - the person who has done it or the person who sits on the sidelines and says it can't be done?

>The plans to
>construct an atomic bomb take up but a few pages on the Web - but

>y'think?

Perhaps he *is* interested in discussing it at a detail level. But the negeative criticism makes that difficult.

After all, Mike could actually launch a balloon - and no matter what the results were, some would decry it as a "kluge". And if it only made it to, say, 98,500 feet, the mission would be described by some as a "failure".

I just think it's worth a try.

Len, so one part of the project, the corner cube reflector, is easily fabricated using inexpensive materials. Excellent. No need to bother Kelly. I'm sure he's much too busy gearing up for field day or the sweeps.

Regarding the latex balloons, the little PIBAL balloons are not going to get there, if those are the balloons that Mike is referring to. I don't know what kind of fabric the rawinsonde balloons are made from, but they routinely get to 100mb, and often get to 10mb (~30km). Mike just needs to get whatever is currently available and go with it. It will work.

I think planning several launches, each with increasing difficulty, is a way to tackle the problems and see what works and ~who~ works. Nothing sent aloft should be so valuable that it cannot be lost, and expect losses. A receiver for the command burst, a beacon transmitter for tracking and recovery, and a telemetry recorder (internal temp, external temp, and pressure) will verify the attained altitude. He can play with the cross-band repeaters, atv cameras, and hyperspectral imaging during a later launch.

The problem of congested airways is still there. He might consider having a trained group of DFers locally/College Station to recover the package, and move his launch site and crew to Indiana to tame that problem. If he does it with the Scouts, they are always mobile, and actually like going places for a purpose. And Scouting opens doors that might otherwise be closed.

All highly do-able if he gets the right volunteers and sponsorship.

The laws of physics

> The trick here is finding a way to accomplish the task within physical
> law.

No laws have been broken 8^)

In engineering, this requires a rigorous analysis of all facets
> of the problem at hand - a list of problems impeding the design goal
> is developed, and solutions are proposed for each until all have been
> satisfactorily resolved.

1. hmmmm. Your engineering projects must have an unlimited budget

2. In engineering projects, all problems are never satisfactorily
resolved. In fact, most are not. You accept, you are not satisfied.

The posts that we saw earlier were the
> beginnings of the issues list - responding to it with "it's been done,
> it'll work, no problemo!" - type platitudes ain't going to resolve the
> issues - it's just wishful thinking. Or perhaps no thinking at all.

I see that is in quotes. can you dig that up where I said that? You
can't even paraphrase that from any of my posts.

Leo, would you accept my explanations? If there is a graphic that shows
the thermal profile of the atmosphere, should I draw my own, and mail it
to the person? Why not make that reference?

In fact, what you are taking for petulance is the simple provision of
references. I don't know how many techincal reports you read, but where
I come from, they often have *several* pages of references, lately
including some that are indeed web pages.

Sorry that you don't think I have any technical acumen, but you are
wrong. But that isn't my sole purpose in the project, as outlined below.

> Makes
> one wonder ho deep an understanding one would possess to reply in this
> manner! I'd suspect not too deep.......

"One" would not posess all the understanding needed to do this project. My own expertise towards this project would be in the area of Visualization - still and video cameras - and payload integration. In addition, I would be involved with interfacing between the various parts of the group, schools and regulatory agencies. Other people that would be needed are programmers, technician type builders,computer jockeys and let's not forget the recovery team.

As for the launching, I already have a person with experience in launching balloons for NOAA. Does it several times a week.

> not much past the "sounds
>> pretty cool!" stage of the project).

That stage was reached around August of this past year. We are at the beginning stage of making committees now.

> One can read on various websites a plethora of interesting scientific
> information - actually doing it is quite something else.

Yep.

> The plans to
> construct an atomic bomb take up but a few pages on the Web - but
> actually building one might be just a bit more difficult than the
> relatively simple documentation would lead one to believe......lol!

At least you don't exxagerate! Sheesh!

> If Mike was not interested in discussing this topic at a detail level,
> then perhaps it was a bit unwise to post it in a public newsgroup -

How much detail do you want? I expect that as this project evolves, I will post a lot of info on our club website.

I would be interested in providing detail as the project evolves.

Of course, I'm handicapped by the fact that some here want me to reinvent the wheel.

Yes, it is possible to send a small balloon and payload to the edge of space, and safely retrieve it. But if I can't convince people here that it is being done(and if I give proof, it is considered being petulant) then what can I do?

> unless there was some other reason for doing so......? Wonder what
> that might be.....! hmmmmm - Rah Rah Rah, Sis Boom Bah......
> y'think?

Come to think of it, there *was* another reason. A long long time ago in this thread, I brough this project up as an example of what Hams could do that is relevent. Hans had noted that the ARS is being

marginalized.

I noted that such a project had many advantages. We would be working with youth on a science oriented mission, we would be innovating, bringing multiple disciplines together, and garnering good publicity for the ARS. THAT was the reason I brought it up. And barring unforseen setback, it will happen.

> Of course, Jim, you could step up to the plate and use your vast
> knowledge of engineering

Sarcasm doesn't become you , Leo.

> to articulately respond to each of the
> problems and issues raised, educating us all as to why they do or no
> not have a bearing on this project........

Jim raised some good questions. One does not need to be versed in all the disciplines involved to be a good sounding board. What is needed is critical thinking. he can think critically, and that is a good trait.

Many do *not* like that trait of course.

> .....Didn't think so.

Why the lawyer mentality? One must be an acknowledged expert in any field to comment on anything?

- Mike KB3EIA -

Jim, can you honestly say that as an engineer that you have solved all
the problems on any project satisfactorily? Or have you accepted the
results and wanted to do better?

By the above definition, engineering tasks would probably never get done.

What I like (not) is that when I'm told both that it is impossible
(with insinuations as to my lack of knowledge of basic physics), and
again with a direct comment as to my lack of competency, I am somehow
the petulant one.

I do want to get beyond this, but it goes both ways.

1. He would hate academic documents. references- pages of them!

2. Besides, I think that NASA has a very nice graphic and description
of the atmospheric layers.

3. In the complicated many faceted world we live in today, it is
sometimes more important to know where to FIND knowledge than to have
all the knowledge there is (which is BTW, impossible)

One of the things I HAVE to do is sell this concept to people. Even as
strange as this rrap experience has been is that although I have not
encountered it so far in the real world, I must realize that there will
probably be people that simply refuse to believe that we can do this for
one reason or the other.

I may run into a flat earther here and there.

>
>>One can read on various websites a plethora of interesting scientific

>
> I just think it's worth a try.

Lets back up a little bit here, and see if I can salvage something here.

My main job in this whole project has been to SELL people on the
concept of something that is not particularly new, but has been made
more interesting by a fusion of Ham radio, GPS, Packet radio, and
Schools, or perhaps more accurately, youth in general.

The concept is to put volunteers to playwork in sending a payload in an
appropriate container to the shoreline between earth and space, where
the conditions are not like the area that we inhabit. It's cold, there
is almost no atmosphere, there is a lot of radiation, and it is fairly
near the ionized area of the atmosphere.

These conditions make it an interesting place to go to. How do we go
there? Weather balloons provide a tantalizing clue. These latex balloons
are launched on a daily basis by various weather agencies, mostly NOAA,
but also at others. Since this happens so often, the authorities (FAA)
and the launchers of the balloons have worked out a system that allows
this to happen. A science balloon launch will just add one more to the mix.

Another consideration is that the FAA no longer cares about the payload
after it has reached 60,000 feet. That is the top end of their "airspace".

During launch day, you will call them at launch, at 60,000 feet when
they leave airspace, and on descent when they renter airspace at 60,000

feet, then again at landing. This means the balloon spends less time in the path of harm than it might appear at first.

As the payload grows in weight, the regulations become more involved. While still relatively accommodating, it is a powerful incentive to keep the payload light.

How is this done? The payload is often made of a material such as household insulation. Styrene insulation is quite light, and provides good insulation against the cold.

Small versions of electronics are usually used. In the quest for weight reduction, cases are often stripped, and the chassis are mounted directly on the foam. For VHF and UHF communications, not a whole lot of power is needed for the transmitters. A 300 mw "credit card" HT is often the transmitter of choice.

Power being a consideration. Lithium batteries are the power of choice, due to lightness. Anywhere that power can be conserved is worth looking at.

I can go into Foxhunting techniques for landing, but I suspect most here would know about that already.

What's so bad about this?

- Mike KB3EIA -

There are some old-school folks whose idea of "encouragement" is to tell you
you're no good, your ideas cannot work, that you don't know what you're doing,
etc. The idea is that you'll somehow be motivated to prove them wrong, and will
succeed in order to do so.

>>>>>>If they are missing something (and me too, perhaps - this sure ain't

Classic Len trick. Acts like a complete jackass, then says *he's* the injured
party and *you* are acting inappropriately.

The term for such behavior in these parts is "being a smack".

>I do want to get beyond this, but it goes both ways.

>>>actually building one might be just a bit more difficult than the
>>>relatively simple documentation would lead one to believe......lol!

Those plans aren't complete.

>> ;-)
>>
>>>If Mike was not interested in discussing this topic at a detail level,
>>>then perhaps it was a bit unwise to post it in a public newsgroup -
>>>unless there was some other reason for doing so......? Wonder what
>>>that might be.....! hmmmmm - Rah Rah Rah, Sis Boom Bah......
>>>y'think?
>>
>>
>> Perhaps he *is* interested in discussing it at a detail level. But the
>> negeative criticism makes that difficult.
>>
>> After all, Mike could actually launch a balloon - and no matter what the
>> results were, some would decry it as a "kluge". And if it only made it to,
>> say,
>> 98,500 feet, the mission would be described by some as a "failure".
>>
>> I just think it's worth a try.
>
>Lets back up a little bit here, and see if I can salvage something here.
>
> My main job in this whole project has been to SELL people on the
>concept of something that is not particularly new, but has been made
>more interesting by a fusion of Ham radio, GPS, Packet radio, and
>Schools, or perhaps more accurately, youth in general.

Yep. And it's something that requires a team effort.

>The concept is to put volunteers to playwork in sending a payload in an
>appropriate container to the shoreline between earth and space, where
>the conditions are not like the area that we inhabit. It's cold, there
>is almost no atmosphere, there is a lot of radiation, and it is fairly
>near the ionized area of the atmosphere.
>
And success is not guaranteed.

One thing I notice is that there is very little attention given to the fact
that what you're talking about is an ongoing project consisting of a series of
launches. You'll almost certainly not try to reach 100,000 feet on the first
go. Or the second...

>These conditions make it an interesting place to go to. How do we go
>there? Weather balloons provide a tantalizing clue. These latex balloons
>are launched on a daily basis by various weather agencies, mostly NOAA,
>but also at others.

At this point in time, I don't know whether latex ballons can take one of your
packages to 100,000 feet or not. I do know that they can be useful in the
development process.

>Since this happens so often, the authorities (FAA)
>and the launchers of the balloons have worked out a system that allows
>this to happen. A science balloon launch will just add one more to the mix.

>
>Another consideration is that the FAA no longer cares about the payload
>after it has reached 60,000 feet. That is the top end of their "airspace".
>
>During launch day, you will call them at launch, at 60,000 feet when
>they leave airspace, and on descent when they renter airspace at 60,000
>feet, then again at landing. This means the balloon spends less time in
>the path of harm than it might appear at first.
>
>As the payload grows in weight, the regulations become more involved.
>While still relatively accommodating, it is a powerful incentive to keep
>the payload light.
>
>How is this done? The payload is often made of a material such as
>household insulation. Styrene insulation is quite light, and provides
>good insulation against the cold.
>
>Small versions of electronics are usually used. In the quest for weight
>reduction, cases are often stripped, and the chassis are mounted
>directly on the foam. For VHF and UHF communications, not a whole lot of
>power is needed for the transmitters. A 300 mw "credit card" HT is often
>the transmitter of choice.
>
>Power being a consideration. Lithium batteries are the power of choice,
>due to lightness. Anywhere that power can be conserved is worth looking at.
>
>I can go into Foxhunting techniques for landing, but I suspect most
>here would know about that already.
>
> What's so bad about this?
>
You may fail, Mike. Worse, you may succeed!

THIS WILL BE MY LAST TIME I PUT UP NEWSLINE HERE. I MOVE TO ZAKINTHOS IN TWO WEEKS AND HAVE NO AOL THERE. SOME ONE ELSE NEED TO TAKE OVER DOING JOB. IT BEEN LOTS OF FUN.

MR. RADIONEWS

Amateur Radio Newsline™ Report 1423 November 19, 2004

Amateur Radio Newsline report number 1423 with a release date of Friday, November 19, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio in California says goodbye to the Tournament of Roses Parade and W7DXX speaks out on his Internet controlled remote base in Baghdad. And its not the first time. Find out the details on Amateur Radio Newsline report number 1423 coming your way right now.

(Billboard Cart Here)

**

PUBLIC SERVICE: HAMS QUIT TOURNAMENT OF ROSES PARADE - LIMIT SERVICE TO ATV

Ham radio will not be a major part of the 2005 Tournament of Roses Parade. Amateur Radio Newsline's Norm Seeley, KI7UP has the rest of the story:

--

Although it was never officially part of the Tournament of Roses, ham radio has been providing a communications link along the Rose Parade route for more than 40 years. And long before there was any official group, people like Tom O'Hara, W6ORG, of P-C Electronics were the early pioneers:

--

O'Hara: "I first got involved with the Rose Parade
communications
when I was one of the Emergency Coordinators for Pasadena. They asked us ti help out with some longer range stuff than what the CB operators were doing. This was in the middle 1960's."

--

Using video cameras and Amateur television, the ham radio volunteers were ever alert for any kind of an emergency situation that might develop. If they spotted something they would send their pictures

back to the parade coordinator who could then take the necessary action.

--

O'Hara: "Later on they added more and more ATV and more and more
hams. At one time I think there were 17 camera positions."

--

Amateur Radio literally pioneered the use of closed circuit television for coordinating large scale events in the Tournament of Roses Parade. At one time hams even had Amateur Television transmitters sending back pictures from helicopters flying overhead. And they did this long before most television stations had camera equipped news choppers of their own.

--

O Hara: "Got involved with the helicopter with the first ATV in 1968. Put it in the Sheriff's helicopter. And when I got my own helicopter I put it in and flew around one year."

--

As the parade grew, so did the Amateur Radio communications effort. By the 1970's TORRA had unofficially been formed. TORRA stands for
Tournament of Roses Radio Amateurs and in the 1980's the hams involved formalized as a club and with this came the golden days of ham radio supporting the parade.

Today TORRA has more than 300 active members who regularly volunteer their time. At least that's the way it had been until an incident
occurred last year. That's when an incident took place that apparently caused things to go sour.

According to an article in the Pasadena Star News, a pair of ham radio operators were carrying equipment onto the grounds of Tournament House in preparation for the last parade. They were stopped by a senior Tournament official and their presence challenged. The unnamed official even went so far as to accuse the ham radio volunteers of lying to get on the grounds.

Now enter Nextel. The same Nextel that has patented the words push-to-talk.

Nextel is a corporate sponsor of the 2005 parade, and reportedly has donated a number of phones to the event. This means that most Tournament of Roses officials will have a Nextel phone with direct walkie-talkie service in their pockets.

Bill Flinn is the Tournament's chief operating officer. Talking about Amateur Radio's departure he was quoted by Pasadena Star News
as saying: "I think it's come to the end of a run. We are sorry to see them go."

But depending on the Nextel walkie-talkie phones as a primary form of communications could turn out to be a mistake for the parade and those that run it. Unlike hams, parade officials and their corps of volunteers are not trained communicators. Rather they have been used to handing a message to a ham radio operator and having an answer appear. Most are likely unaware that they will have to contend with numerous people calling at the same time. All with priority traffic and all demanding immediate answers.

With their years of experience, the hams were the buffers who learned how to work around these problems. But the cellphone provider is coming in cold with no experience in this specialized communications area. There will likely be no experienced net control stations and no way to prioritize needs.

On Thursday, November 18th, as this report was being prepared, we received a copy of a letter from TORRA Chair Jeanne Nordland, WD6BWN, thats being sent to all of the groups members. It confirms that hams will not be providing voice communications in 2005, but that A-T-V assistance to the parade will continue as it has in years past.

But ATV is only one part of the equation. the question still remains as to whether or not the Nextel phones can take the place of the hams and a structured voice communications network. This is something that nobody will really know until January 1st of 2005. That's when
the drama will be played out live to the world on their livingroom T-V screens -- on New Years Day. And likely, 10's of millions of people will be watching.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, reporting.

--

As Norm said, these days the Tournament of Roses Amateur Radio group currently has about 300 members. How many might return if they are asked back in 2006 is really, anyones guess.

To read the complete Pasadena Star News article on the departure of ham radio from the Tournament of Roses Parade, take your web browser to http://www.pasadenastarnews.com/Stories/0,1413,206%257E22097%257E2529574,00.html

THE BPL FIGHT: FCC ISSUES ERATTUM ON BPL R&O

The FCC has issued whats known as an Notice of Erratum. One that slightly modifys its Report and Order on the introduction of Broadband Over Powerline operations.

Two changes were made. First in Section 15.15 under General Technical Requirements section B now reads: "Except as follows, an
intentional or unintentional radiator must be constructed such that the adjustments of any control that is readily accessible by or intended to be accessible to the user will not cause operation of the device in violation of the regulations. Access BPL equipment shall comply with the applicable standards at the control adjustment that is employed. The measurement report used in support of an application for Certification and the user instructions for Access BPL equipment shall clearly specify the user- or installer-control settings that are required for conformance with these regulations."

Also, Section 15.31 is amended by revising a paragraph under Measurement standards to read:
"Measurements shall be performed at a sufficient number of radials
around the equipment under test to determine the radial at which the field strength values of the radiated emissions are maximized. The maximum field strength at the frequency being measured shall be reported in the equipment authorization report. This paragraph shall not apply to Access BPL equipment on overhead medium voltage lines. In lieu thereof, the measurement guidelines established by the Commission for Access BPL shall be followed."
While these changes may seem as minor right now, they could impact ham radio and other services in the future. This, when and if B-P-L ever becomes a major player in the area of direct to home high speed Internet access. (FCC)
**

THE BPL FIGHT: ITS NOT BPL IN WESTERN VK

Meantime, some good news on the B-P-L front from down-under. Word that interference being heard by hams in Western Australia is not coming from a powerline broadband installation. The problem is that nobody is sure exactly what the source is. W-I-A newsman Dennis Muldownie, VK6KAD, is in Redcliff with more:

--

One of the rumors persisting in VK6 is that our power authority is running BPL. This has been denied several times. I may have found the source of these rumors, as I have stumbled across a website dating back to 2002, in which the testing of Broadband by the power company was mentioned.

However it was not BPL technology. There is an ongoing project here to "rewire" the West by placing low voltage and some higher tension

feeders underground. This is - or was - progressing slowly. It improves the street-scape out of sight and reduces the potential for damage in bad weather. In providing these services apparently optical fiber cable was also placed in the trench, and the Broadband was under test on the fiber. Not you will note on BPL.

Very little of WA was ever wired by Cable as in Sydney and Melbourne for Cable TV, and therefore Cable Modems are not an option. The way is clear for the power authority to provide such services by Fiber as it replaces the overhead with underground. I have not found out what the tests revealed.

And having said all that, I am finding excessive noise in isolated pockets on the AM Broadcast band, from power lines in my area. I suspect the approved items used on Power lines obtainable from many outlets are not as bullet proof as we would like to suspect...

The saga continues.

--

The saga does indeed continue and Dennis is one of those at the forefront of the search. (WIA News)

RADIO AND THE LAW: CLUBS AND THE FCC

Still with legal issues, for a group to be eligible for a club callsign, the FCC has four criteria thar must be met. It says that a club must be made up of at least four members, have a name and legal document of organization and a primary purpose of being devoted to Amateur Radio activities consistent with FCC rules. But do you know how many of the members of a radio club need to hold ham radio licenses?

These and many other questions are answered by former FCC rules Chief John B. Johnston, W3BE, in an article titled "What Is a Club"

appearing in the just out December issue of Worldradio Magazine. And filling close to two pages, Johnston explains in great detail the recognition given clubs by the regulatory agency and the rules regarding club call signs.

If you have ever had questions regarding radio clubs and their dealings with the FCC, this is the tell all definitive article you have been waiting for. More about subscribing to Worldradio and sample issues is on-line at www.wr6wr.com

And less we forget, the answer to how many members of a radio club must hold a valid FCC issued ham radio license is only one. The rules say that at least one member must have an operator and primary station grant from the agency to apply for a club station license. (Worldradio)

**

RESCUE RADIO: US COAST GUARD AUXILIARY SEEKS RADIO AMATEURS

The ARRL Letter says that the U-S Coast Guard Auxiliary is looking for Amateur Radio operators or prospective amateur licensees. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

Wayne Spivak, KC2NJV, is with the Coast Guard's National Public Affairs Department. He says that because the service operates every day, in good weather and in bad, that the U-S Coast Guard Auxiliary is on the air whether there is power to operate or not. And at times like these, the Coast Guard and the Auxiliary rely on the Auxiliary Net as a backup radio network. In areas with a large U-S Coast Guard presence, the AuxNet operates in both a support and backup capacity. More important, in regions where there is no regular Coast Guard presence, the Auxiliary may rely solely on its AuxNet for communication.

And because of this, Spivak says the Coast Guard Auxiliary is seeking ham radio volunteers. He says that this is because amateurs are good communicators. That they have developed both in everyday radio operation and participation during emergencies through RACES, ARES and SKYWARN.

Spivak believes that Amateur Radio and the U-S Coast Guard Auxiliary are an ideal fit. He says that the US Coast Guard Auxiliary is open to all US citizens over the age of 17. A security background check, paid for by the US Coast Guard, is required before an applicant is accepted. If you are interested in expanding your public service horizons, please visit the US Coast Guard Auxiliary Web site. Its in cyberspacw at www.cgaux.org. Again, that U-R-L is www.cgaux.org and I'm Bruce Tennant, K6PZW, reporting for the Amateur Radio Newsline.

--

A direct link to the U-S Coast Guard Auxiliary application webpage is at http://www.cgaux.org/cgauxweb/getzip.html (ARRL)

**

RESCUE RADIO : MARITIME MOBILES SERVICES NET NOW STREAMING AUDIO

The sound of the daily Maritime Mobile Service Net can now be heard in streaming audio on the Internet.

The net meets daily on 14.300 MHz between 16:00 UTC and 03:00 UTC. The audio streaming originates from the receive site of W-L-O Marine Radio in Mobile, Alabama using a Japan Radio Company N-R-D 535 D receiver fed from a T-C-I ground mounted loop antenna.

As with any streaming audio on the Internet, there will be an inherent lag from the time its encoded in Alabama and when you hear it on your computer. In this case the delay could be anywhere from 4 seconds to 1 minute, as compared to live on-the-air audio.

Because of this, this streamed audio is not meant to be used to control the net. Rather, it is intended as another means for non hams to listen to the net, family of boat crews to listen for the boat and a way to monitor the net when you are away from the radio or when you have no propagation to hear the net control station.

You can hear the streamed audio daily when the net is in operation. You will need a media player like Winamp or Real installed on your computer. Simply take your web browser to www.mmsn.org and click on the yellow icon that says "Listen Live." (MMSN)

**

ENFORCEMEMT: CBS PROTESTS JACKSON WARDROBE MALFUNCTION FINE

Viacom Corporation, the parent of the CBS network says the FCC's proposed 550-thousand-dollar fine for Janet Jackson's Super Bowl "wardrobe malfunction" is "entirely illogical." Viacom says neither it nor anyone at CBS knew Justin Timberlake would yank off a piece of Jackson's black leather top.

The move exposed Jackson's right breast for less than a second, but generated a-half (m) million complaints to the Federal Communications Commission. The fine is the largest ever imposed against a T-V outlet. Viacom is seeking to have it rescinded and has indicated that it will fight the matter in the Federal courts. (Published news reports)

**

ENFORCEMENT: WLFK-LP ADMONISHED FOR BROADCASTING ADVERTISEMENTS

Low Power FM stations are prohibited from broadcasting advertisements by the Communications Act of 1934 and by the FCC's own rules. And
doing so has brought a letter of admonishment to a Wisconsin based LPFM station.

This hand-slap went to WLFK-LP and is looked at as a fair warning to all Low Power F-M stations not to broadcast commercial

advertisements. A letter of admonishment carries a warning to cease and desist but no punitive action such as a fine. More is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-3555A1.doc (FCC)

**

TELECOMMUNICATIONS LAW: SPAMMER BOUNTY SUGGESTED BY FTC

The U.S. Federal Trade Commission has given its endorsement to a plan that would reward insiders for information leading to the arrest and conviction of people or companies that produce spam. In a recent report the FTC said that some anti-spam proposals, such as a "Do Not Spam" list similar to the agency's highly successful "Do Not Call" list, would not work and could make spam worse. But the agency said that providing monetary rewards for turning in spammers could work in some cases. The FTC is suggesting rewards ranging from $100,000 to $250,000 to turn spammers in. (FTC)

**

SPECIAL EVENTS: PEARL HARBOR DAY COMMEMORATIVES - DEC. 4 - 7

Two upcoming special event stations will be on the air to commemorate Pearl Harbor Day. The first will be operated by the Historical Electronics Museum Amateur Radio Club from December 4th to the 7th using the call sign W2W. Operation will be in the General; class segments of all of the high frequency bands. Further information is on-line at www.qsl.nwt/w3gr or by e-mail to w3gr@arrl.net (Worldradio)

The other operation we have heard about will be one day only on December 7th. This one by the U-S-S Kidd Amateur Radio Club down in Baton Rouge, Louisiana. Look for this operation mainly SSB on 30 meters from 14.250 to 14.320 MHz and C-W near the popular QRP calling frequencies on 40 through 10 meters. More on this one is on the web at www.lsu.edu/brarc (Worldradio)

**

SPECIAL EVENTS: THE BATTLE OF THE BULGE - DEC. 16 - 20

And a bit later in December the Anaheim California Police Amateur Radio Club will sponsor special event station K6B. This, to commemorate the 6oth anniversary of the famed Battle of the Bulge that took place during World War 2. Operation will be on 40 through 15 meters from December 16th through the 20th. For more information please e-mail km6hb@arrl.net. (Worldradio)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United
States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

NAMES IN THE NEWS: A FLY-IN TO HONOR K9TRG

He served the ham radio community for years, especially in the early days of F-M. And on Veterans Day, Thursday, November 11th, some nineteen hams from around the nation gathered at a restaurant in Suburban Chicago to honor their friend Art Householder, K9TRG, of Spectronics fame.

If you operated F-M in the 1960's or 1970's using radios like a
Motorola 80 D or a General Electric Progress Line, then the name Art Householder and the call sign K9TRG has to ring a bell. Back when F-M was in its infancy, Art was the premiere supplier of decommissioned police and taxi dispatch radios to the growing world of Amateur Radio F-M.

Now retired and in declining health, he cannot travel as he used to. So this year his friends came to the Rose Garden restaurant in Elkgrove, Illinois to spend the day with him.

And the list reads like a whose' who of ham radio including such notables as Evelyn Garrison, WS7A, who came from Washington State and F-M pioneer Dick McKay, K6VGP, of Los Angeles. From the Chicago area ATV pioneer Henry Rue, AA9XW, the FCC's Russell "Joe" Moonie and RAIN producer Hap Holly, KC9RP, were among those sharing the day with .

While the luncheon is held every Thursday, this was notable event for Art because of the number of people who either took time off from work or traveled thousands of miles to attend. And many say that they plan to do it again next year. (KC9RP)

**

RADIO LAW FOLLOW-UP: COURT ORDER ON PET CHIPS THAT CAN'T BE READ

Remember our story a few months ago about a particular pet identification transponder chip that were not compatible with most scanners in use in the United States? Well, it took some time but a judge now barred a company from selling or advertising these microchips.

The preliminary injunction from San Diego Superior Court Judge William C. Pate yesterday blocks several named defendants from

selling or advertising its unit called "Recovery Chip," If and when the company wants to resume selling or promoting the Recovery Chip product, the court must first approve the company's proposed advertisements. Also, any new ads must disclose that the Recovery Chip cannot be read by the majority of microchip scanners in U.S. shelters.

Banfield, the Pet Hospital has been the U.S. distributor of the particular per I-D chip. It is based in Portland, Oregon and operates in Pets Mart stores throughout the United States. Banfield voluntarily suspended microchip sales in early May, before the lawsuit was filed, and has no immediate plans to resume its microchip program. (Published news reports)

**

EMERGING TECHNOLOGY: FREE WIRELESS INTERNET ACCESS IN VAN NUYS CA

A pilot program to provide free wireless Internet access in part of Los Angeles began on October 29th. This at the Marvin Braude Constituent Services Center in the suburban of Van Nuys. During the six-month program, anyone in the area will be able to use a wireless-enabled notebook computer, P-D-A or other mobile device to access the Internet. The high-speed access will be available in the outdoor plaza, along Van Nuys Boulevard and in public meeting rooms and service counters in the building. (Computing)

**

WORLDBEAT - BELGIUM: QRP POWER TESTS ANNOUNCED

Sunday November 21st, , December 26th and January 16th are the dates announced of the second Belgian U-B-A 'Candlelight Tests." In these tests, several stations transmit simultaneously on 80, 40 or 30 meters running micro power levels ranging from 100 milliwatts down to 5 milliwatts. The challenge for participating amateurs is to copy the code words embedded in the transmitted messages. Full information is on the U-B-A website. A link to it appears ay www.uba.be/actual/candlelight/candlelight_en.html. (GB2RS)

**

DX

In D-X, PF5X, informs the Ohio Penn D X newsletter that he has received his license from the local authorities in Singapore. Also that his station was inspected and approved for active usage. His callsign is 9V1CW, and Enno says that he will be in Singapore for about 3 years. All QSLs via PA0KHS direct or via the bureau. (OPDX)

And word that N3SIG has been redeployed to McMurdo Station in Antarctica. Chris says that he expects to be there until March 5th. Thats the good news. The bad comes in a report that says the ham shack's antennas there were destroyed, and there us also damage to

the main HF rig. So he plans to hand carry a HF rig from his home in Pennsylvania to Antarctica. When he arrives, Chris says that he will construct a dipole and will be on the air as N3SIG stroke KC4. Listen for him mainly on 14 dot 243 MHz which is the unofficial Antarctica ham radio calling frequency. (OPDX)

Lastly, a real rare one with word that Christmas Island as VK9XG will be active from the 22nd of November until the 8th of December. The station will be operated by W0YG and W0MY and will be operational in the CQ world wide CW contest plus a much-needed RTTY activation on 40, 80 and 160 meters. QSL this one as directed on the air. (OPDX)

**

THAT FINAL ITEM: THE BAGDHAD REMOTE BASE - REVISITED

Two weeks ago we reported that former 73 Magazine Editor Keith Lamonica, W7DXX, had arranged for the installation of a remotely controlled transceiver in Baghdad, Iraq. A transceiver whose functions could be controlled by hams world wide over the Internet.

Well, that announcement by W7DXX has created quite a stir in ham radio circles because of the armed conflict taking part in that nation. This has resulted in many questions from the ham radio community that Lamonica recently addressed in an interview with Rain's Hap Holly, KC9RP. W7DXX says that some hams don't spend the
time to read whats in front of them:

--

Lamonica: "There has been a lot of activity, especially on the qrz.com site about the operation and people just don't take a breath and sit back and read the instructions. We have outlined everything that should satisfy anyones curiosity, but you still have people that just put their blinders on and go off to make wild statements."

--

Lamonica has lots more to say about the Baghdad remote and other uses of the Internet by ham radio. You can her it all on this weeks RAIN Report. Its on line in streaming audio at www.rainreport.com or on your phone at 847-827-7246. That number is easy to remember as 847-827-R-A-I-N. (ARNewsline(tm), RAIN)

There are a number of dot policy groups in USENET and arguing, venting spleens, running brag tapes and antaganism is what all of 'em are about. Check out sci dot space dot policy or whatever it is for another example. This NG was founded to get arguing over the code tests out of whatever ham NG is was tearing up back then. RRAP is still true to it's founding principles and it ain't about to morph into a place where you'll find much in the way of ongoing civil discussions for anybody.

Somewhere in this thread you indicated that posting your balloon project in the NG was probably not a good idea. It wasn't.

(---cut)

A very good letter from RH to the AH in ME. (grin)

I get the distinct impression from reading
the letter that the Boston FCC Field Office will
be making a "dunkin doughnutz run" up to
Belgrade Lakes in the very near future.

Let's hope it's sooner rather than later and that they have
two or three U-Haul trucks in tow to collect some vintage
ham radio gear for bid a future GSA or similar auction venue.....

:)

For years I have observed/heard K1MAN transmit up to 30
Minutes prior to his "broadcast" using his unique brand
of "precursory frequency preemption". The specific method being
an announcement proclamation of: "IARN Bulletins, coming
up in 30 minutes...15 minutes...10 minutes....etc"
This practice noted above is nothing more than a thinly veiled
overt display of arrogant frequency capturing, performed by this
clown from Belgrade Lakes. (Baxter likely thinks that K1MAN
is a six-locomotive-on-the-point Norfolk Southern freight drag
with 400 coal cars in tow and he toots his big horn in advance
of every grade crossing. Perhaps this is not the best
example to equate him but U get the idea dear readers)

> I believe it 1s fair to say that our understanding of Section 97.113(d)(2)

>
> Accordingly, IARN and W1AW practice are far from "identical."

Agreed!

What many Hams / SWL's also curiously fail to
notice at first glance is that, on a consistent basis
greater than 50% (fifty percent!) of the 'program
content' of IARN H.F. Bulletin broadcasts consist
of material which is created by and produced by
sources OTHER THAN the IARN and k1man.

In any other media venue (apart from ham radio?)
this would be known as blatent plagiarism.

It really makes one wonder what Mr Baxter's true
alteriour motives are, concerning all this arcane
broadcasting he engages in. I seem to feel there
is more to this than just and over-inflated ego.
Who else or what other person in a healthy
mental mindset would pour so much
time and energy into such a goofy endeavor as
something like this?

Nope. WRONG. ERROR.

Didn't need to surf some selected websites NOW.

Tsk. I'd already known of amateur BALLOONISTS who went unmanned high-ballooning a decade ago.

So...where was I "wrong?"

La Cucaracha, you are way over your head on this...but then that happens with regularity.

Mike Coslo claimed he could go to "100,000 feet altitude" or near space" (as he states it) with "latex weather balloons." I claim he can't do that...with those same "latex weather balloons." Atmospheric density and pressure won't allow it and those "latex weather balloons will burst below 50,000 feet.

Does La cucaracha know of Standard Atmosphere? It's in all the fancy flying texts, been there for decades. Pressure, density, temperature all there, all quite good enough for estimating some balloon experiments with their ultimate altitudes versus total balloon plus payload weights. Doesn't have to be exquisitely textbook accurate to begin with, just some estimates, what is colloquially called "ball park figures."

Did you see any estimates of weight, altitude, or ANY cost figures presented in here? I didn't. I doubt anyone else saw them.

Apparently the "dreamers" (or, as they self-ephemistically call themselves, "concept managers") don't consider some estimates as necessary. Nope, they have a CONCEPT but that is way way short of ANY sort of estimated numbers of anything.

"Concept" is just a hunch, a sort of emotional daydream of an idea, ephemeral like a gas without those estimates.

Apparently these expert-knowledge balloonists can float on Will and Idea, because others have done so before? Tsk.

>> >So I guess it's back to talking about the Morse code test! 8^)
>
>YES! QRX while I dial up Carl Stevenson on the other line . .

Why? Does your whip need fresh blood?

>> Nobody's done that for a while!

Must be. Cucaracha Kelly's whip hasn't drawn blood in a long
time.

>fabricated using inexpensive materials. Excellent. No need to bother
>Kelly. I'm sure he's much too busy gearing up for field day or the
>sweeps.

That "corner-cube" type of retroflector was once part of survival
rafts on USAF aircraft. Light enough to be lifted by kite (also part
of the raft).

Corner cubes can be highly irritating. At Rockwell, the optics
designer's mini-bull-pen had one made by one of the drafts people
from three flat mirrors. Whenever you were there and looked at
that one wall, regardless of position or at which table, you found
yourself looking back at you. :-)

>Regarding the latex balloons, the little PIBAL balloons are not going
>to get there, if those are the balloons that Mike is referring to.

Tsk. The ROI (Rules Of Engagement) in this newsgrope is that
everyone MUST do something they say. :-)

Well, I've told Mike that them surplus-store "latex weather
balloons" ain't going to do it, Kelly implied as much. But, if he
gets negative comments he goes all pouty and sniffly and
condemns the dastardly (if an NCTA) negative commenters as
trying to discourage him or that "it is impossible."

>I
>don't know what kind of fabric the rawinsonde balloons are made from,
>but they routinely get to 100mb, and often get to 10mb (~30km). Mike
>just needs to get whatever is currently available and go with it. It
>will work.

Of course they will work. But, Mike (if he wants to be grande
"concept manager") should memorize the public info on Standard
Atmosphere tables before stepping into the self-declared CEO
(Creative Efficiency Officer) spot. CO$T is involved with this whole
thing...it ain't just filling cute party balloons at some state fair.
Just considering the Standard Atmosphere -

1. Atmosphere density decreases remarkably at altitudes above
around 10 kilofeet. A closed balloon envelope displaces only
so much atmosphere despite its size and the density (or
"weight") remains essentially the same. That provides one of

the upper-altitude maxima for the project...when related to the payload weight.

2. Atmospheric pressure also decreases with increasing altitude. A closed balloon envelope has to take that into account, either by being only partly filled at launch altitude (envelope weight is dependent on expansion capability, the unfilled part being just dead weight at launch). Balloon envelope maximum size will establish the maximum payload lift, having to correspond with item (1.) and the lower of either altitude will be the limit.

3. Atmospheric temperature gets remarkably cold at altitude and there's a roughly 70 C drop between altitudes of 10K feet and 100K feet. As temperature goes down, gas pressure will go down and that impacts on both envelope structure strength and displacement, thus a fine point on lifting capability.

4. There's been inadequate mention of the "lifting gas" availability handling, and cost. Only one mention was made of a "typical cost" at one locality...but not by the "concept manager." Helium gas in heavy cannisters/tanks (high cost if not returned to vendor) is readily avilable for welders' use (Heliarc welding). That stuff is "safe" except that, as is, it is under a lot of pressure which must be reduced somehow for filling relatively delicate balloon envelopes. Hydrogen gas is available in the same cannister/tanks but is highly flammable and may be subject to some local rules on hazard materials' handling. Low-pressure hydrogen can be produced easily by high school science electrolysis very cheaply but large balloon envelope sizes need a lot more of it than is done in classroom experiments..

5. The slightest mention of BASICS involved in getting the balloon and payload up at all is "discouraging the concept."

>I think planning several launches, each with increasing difficulty, is
>a way to tackle the problems and see what works and ~who~ works.

Concept managers don't have to concern themselves with details. That's up to the serfs who do all the work, foot their own bills, and have some idea of Standard Atmosphere data. Concept managers have their CONCEPTS and that is the end in itself. <snort>

>Nothing sent aloft should be so valuable that it cannot be lost, and
>expect losses. A receiver for the command burst, a beacon transmitter
>for tracking and recovery, and a telemetry recorder (internal temp,
>external temp, and pressure) will verify the attained altitude. He
>can play with the cross-band repeaters, atv cameras, and hyperspectral
>imaging during a later launch.

Absolutely so. Just the same, an off-the-cuff estimate of costs per launch could go from $200 to even $500. depending on the

payload "science." As I said, this isn't inflating some party
balloons at a fair. Three words: Sponsors, sponsors, sponsors.

>The problem of congested airways is still there. He might consider
>having a trained group of DFers locally/College Station to recover the
>package, and move his launch site and crew to Indiana to tame that
>problem. If he does it with the Scouts, they are always mobile, and
>actually like going places for a purpose. And Scouting opens doors
>that might otherwise be closed.
>
>All highly do-able if he gets the right volunteers and sponsorship.

Sponsors aren't going to buy into the "concept manager" stuff
unless there's something in it for the sponsor.

Now watch all the "noble" PCTAs chime in with "cockroach" humor
and the resident Gas Bag try to call others for one. Way to much
DREAMING of glories in here and not enough practicality.

>Dreaming about getting that ticket is one thing. DOING it is quite
>another.

Tsk again. I bypassed licensed amateurism in 1956, going
directly to the commercial license. Went full time into radio-
electronics.

So...I've DONE IT, Herr Gasbag, a long time ago.

I remain both a pro and an amateur in electronics, being a
hobbyist before graduating high school and continuing that for
a long time of my professional career.

>Mike will likely see "Leonard" at 100k feet before you obtain an amateur
>radio license.

Tsk. You best lay off the peyote or whatever substance you inhale.

>Happy psychological sugar-boosting and message knuckling to you.

More tsk. I'm not the one into pipe dreams ("grand concepts and
graphics management")

I'm not into looking for sweet words of approval on the computer plus
"applause" for all the pipe dreaming. Others need to be nurtured by
"peer approval" first before they work up the courage to go DO it.

Tsk, tsk...I'm not into arguing a subject by snitting on others or
working up IMAGINARY "reasons" for engaging in anything. Heil-the-
Gasbag seems capable of nothing else.

Odd. A gasbag that doesn't know Standard Atmosphere...but is an
"expert" on lofting many and varied airhead comments on others'
persons.

The PCTA isn't interested in this subthread...they are too busy
with soothing syrup words to the Grand Manager of Concepts
and Balloon Management.

Geez...only a few of them know the Standard Atmosphere and
they want to get all up-in-the-air about Grande Concepts! :-)

Not to worry. They are all "managers" in radio and can order
anyone around. They all passed a high-rate code test, therefore
they are Expert at anything they talk about, having lots and lots
of "authority."

I wish!

Professionally speaking.......

My projects have to meet very detailed specifications and industry
standards (CCITT, EIA, IC), and are designed to be commercially and
economically viable - with as few as possible 'surprises' for the end
user to discover. If a business case cannot be prepared to justify
adequate funding for this level of quality in the end product, it dies
right then and there. This is how things are done in the professional
world - unless you enjoy recall programs, product liability suits and
loss of market share due to the poor reputation that follows......not
to mention the negative impact this would have on one's career.

For an amateur level project, the rules are obviously *far* less
rigorous - many tradeoffs can be made, as the end user is you - you
decide the level of quality, time, costs and losses that you can
afford, and go from there. One thing that cannot be traded off,
however, are the realities of physics as they apply to the project -
which leads us back to the original discussion point.....

>
> 2. In engineering projects, all problems are never satisfactorily
>resolved. In fact, most are not. You accept, you are not satisfied.

Wow! I'm sure glad I don't work where you do! This explains the
erosion of the North American manufacturing sector pretty well.....

This philosophy may hold true in a Chinese power tool plant making
$5.00 battery powered drills - in my field we use the Six Sigma
protocol (a form of total quality management, originally developed by
Motorola) to ensure that folks who subscribe to that philosophy don't
sneak something crappy out the door!

>snip

>>>>There is a world of difference between someone like Jim, who questions
>>>>and looks at my answers, and one member that says what I am considering
>>>>is impossible, and yet another that calls me incompetent.

Not really - he frequently uses posts like this one to play off his
own political agenda with several of the other posters here in RRAP.
Look closer - and read between the lines......

You are most definitely not incompetent, though - not sure why someone
would infer that! You're thinking, and you have done your homework!

And what you are planning is most definitely possible - it's been
done, many many times before!

So, if you posted your ideas in a discussion group, and someone
commented that it is not possible to do what you plan to do, yet you
have researched it and know that it can - why not try to rationally
explain the solutions that you have discovered to each of the
show-stoppers raised? Rather than get angry with them and fire off a
pile of web references and indignant comments, that is. Or ignore
them entirely - after all, you know it can be done - right?

Discussion groups are for discussions, aren't they....?

>snip
>
>> Of course, Jim, you could step up to the plate and use your vast

Not necessarily sarcastic - I see no real technical comments at all,
just cheerleading, platitudes, and pooh-poohing of the comments made
by others.....which would be considered half vast :) (sorry -
couldn't resist!)

>
>
>> to articulately respond to each of the

If there's one thing we can always count on, it's Jim raising
questions. Even direct questions to him are usually answered with
questions! Not much in the answer department, though.....and none so
far in this thread!

But you can always bet that, if the possibility exists to springboard
off a post and take a shot at one of his adversaries (or those dreaded
'professionals'!), he'll jump on it.

Bwahaahaa indeed.

You better! After this ruckus if you don't come through and pull
together a squad which flies an instrumented ballooon to FL 100 you'll
never live it down in this twisted village.

> I've always found it hard to believe that a few square inches of brake
> lining can stop a bog car. Seems impossible!

"It seems impossible" sorts of comments like this are at the core of
why this ruckus came into being. Friction brakes work based on the
ancient F=ï¿½N relationship taught in every eleventh grade
pre-engineering/science physics course provided in modern times. So
what's up with your bog car brake mystery? You cut that class or what?
Or maybe you weren't on that track in the first place?

What courses, exactly James, did you have in your freshman year in
E-school which taught/preached how to do a "rigorous analysis of all
facets of the problem at hand . . . a list of problems impeding the
design goal is developed, and solutions are proposed for each until
all have been . . " and come out of it with working pile of
hardware?

. . . as if . . maybe two-three years outta E-school you were allowed
to take a poke at an assignment like that.

> Jim, can you honestly say that as an engineer that you have solved all

Ya missed the point.

Boilerplate verbiage like:

"In engineering, this requires a rigorous analysis of all facets of the problem
at hand - a list of problems impeding the design goal is developed, and
solutions are proposed for each until all have been satisfactorily resolved"

is the ES 101 stuff. Actually doing it is very different. For example - just
what *are* all the facets of a given problem?.

>. . . as if . . maybe two-three years outta E-school you were allowed
>to take a poke at an assignment like that.

More like a year.

The trick is that the volunteer folks don't have the paycheck incentive. Just
the reverse - such a project costs them money! So the motivation has to be
elsewhere.

I don't recall Mike ever saying the first ballon would reach 100,000, nor that
he'd use latex weather ballons, or even helium, or whatever.

To a point, perhaps - it depends on the field. If you're designing
consumer electronics or appliances, 'close enough' is OK as long as
the safety issues are covered to spec. If you're designing hi-rel
equipment, or aircraft, 'close enough' won't do.....

> How close, just for grins?

Not very. The state was interested in sampling the air from ground
level to around 15,000 feet along the I-95 corridor. Other teams from
other small airports in the region were also doing launches. The
balloons were made from ployester fiber reinforced aluminized Mylar
which does not stretch which in turn automatically limited their
altitude. The FAA tracked 'em with radar in cooperation with the
state. The balloons topped out in the range of 25,000 feet then
cruised east off the New Jersey and Delaware shores and eventually
disappeared. There were some who suspected that F-16s looking for
gunnery practice were "involved" in those "disapperances". I dunno.

> >around the state listening to the
> >payload radio for backup purposes.
> >
> Good show!

No kudos claimed by me for this one. It was not my project, I
engineered nothing, I was just a launch site warm body. I didn't even
get another merit badge out of it. What we did get out of it however
was attaboys from the state and the feds which matters considering how
much clout they have when it comes to holding off the real estate
developers and local noise abatement bellyachers which threaten the
existence small airports. We scratch their backs, they scratch our
backs.

Mr. Glenn A. Baxter
RR 1 Box 776
Belgrade Lakes, ME 04918

RE: Warning Notice: Amateur Radio license K1MAN
Case #EB-2004-07

Dear Mr. Baxter:

On September 15, 2004, we notified you that we had received approximately a dozen complaints that your Amateur radio station's transmissions started while the communications of individual operators and groups such as the Salvation Army Team Emergency Radio Net, which was handling health and welfare traffic for this season's hurricane victims, were ongoing. The letter cited an April 14, 2004 warning issued to you about your transmissions starting while existing communications were ongoing, and warning you that your publishing a "transmission schedule" does not give you the right to begin transmitting on a certain frequency at a certain time if there are ongoing communications on that frequency.

Pursuant to Section 308(b) of the Communications Act of 1934, as amended, 47 U.S.C. Section 308(b), we requested you to respond to the letter within 20 days from receipt certifying: 1) what action(s) you are taking to correct the deficiencies in the operation of your station; and 2) specifying what method of station control you have implemented for your Amateur radio station transmissions.

Your response dated October 14, 2004, in which you stated that "No corrective actions are necessary at K1MAN" and "No changes are needed with regard to station control..." failed to furnish the information requested by the Commission.

In addition to the above mentioned complaints, we have received additional complaints of interference from your station's transmissions starting at 9:31 PM on 3.890 MHz on October 16, 2004; 6:23 PM on 3.800 MHz and 7:59 PM on 3.977 on October 19, 2004; and 7:59 PM on 3.977 MHz on October 20, 2004. We also note that, according to your web page, your station now transmits on 14.275 MHz from 11 PM

until past 6 PM the following day.

We are affording you an additional 20 days from receipt of this letter to furnish the information requested in our September 15, 2004 letter.

Additionally, pursuant to Section 308(b) of the Communications Act of 1934, as amended, you are requested to provide the name, call sign, and address of the control operator(s) on the additional dates and times mentioned above (9:31 PM on 3.890 MHz on October 16, 2004; 6:23 PM on 3.800 MHz and 7:59 PM on 3.977 on October 19, 2004; and 7:59 PM on 3.977 MHz on October 20, 2004), and to describe the method of station control used each time the station was transmitting. You are also requested to furnish that information for the 19 hour transmissions recently begun on 14.275 MHz.

In an inquiry of this type we are required to notify you that a willfully false or misleading reply constitutes a separate violation made punishable under United States Code Title 18, Section 1001. Failure to reply also constitutes a separation violation of Commission rules.

CC: FCC Northeastern Regional Director
FCC Boston Office District Director

Why? Does W1AW transmit their bullitens for monitary gain like K1MAN?

Dave Mullenix of the EOSS group states:

*> We use Totex weather balloons. They seem to be the best quality.
*> We purchase them from:
*>
*> Kaymont Consolidated Industries, Inc.
*> 21 Sprucetree Lane
*> P.O. Box 348
*> Huntington Station, NY 11746
*> Phone (voice): 516 424-6459
*> Phone (fax): 516 549-3076
*>
*> Balloons are sized by their weight in grams. Kaymont currently
*> carries two sizes, 800 and 1200 grams. The 800 gram size will
*> lift 3-4 lbs to 100,000 feet. The 1200 gram size will take a full

*> six pound payload to 100,000 feet. Prices are about $45.00 each for
*> the 1200 gram balloons. Kaymont accepts telephone orders and credit
cards.

End Dave Mullinex of EOSS quote

Kaymont has this to say about their Totex balloons:

*> This balloon was developed in the 1940's and is made from a natural
*>latex compound which is highly elastic and tear resistant. Physical
*>properties are retained at extremely low temperatures and the latex
*>compound contains additives which contribute to its resistance to
*>oxidation and ozone. The robustness of the rubber film allows the fully
*>inflated balloon to maintain its spherical shape making it particularly
*>suitable for severe weather launches.

End Kaymont Quote

Latex balloons.
Helium.
100,000 feet with a six pound payload.

I can supply references upon request.

Why the difference between a manufacturer of the latex balloons, and a
documented user group, and your facts?

Nothing beyond "surprisingly inexpensive". I'm not making a financial
report to the group.

If you want more, you could dig it out of some of the other posts. A few
costs are in there.

K1MAN is going to be around for a loooong time. Hate to burst
your pea brain bubble, but Baxter has lotsa money and an outstanding
legal team. In fact, he just retained the services of a D.C.
communications law firm on November 15th. It is going to be
soooooo much fun watching you MAN haters continue to froth at
the mouth! ROTFLMAO!

73,

Lloyd

Sure enough. Am I an expert in this field? Not hardly. I'm going to
have to launch a few of these things before I can be a neophyte. But I
can do the research, and learn as I go.

Right, I have no intention of doing it by myself.

Pop quiz time!

Weather people often send balloons of the latex variety into the
atmosphere. Why would they not often send them to 100,000 feet?

a. Because the balloon is made of latex, and will not "go" that high?

b. Because there isn't enough "lift" to take a payload that high

c. Because most of what they are interested in takes place at lower
altitudes.

d. more financial information please... 8^)

Here are a couple links: pssst, don't let Leo know I gave you these! ;^)

http://www.eoss.org/pubs/faqloon.htm

This is a gentleman of experience going through a FAQ on the subject.
Part way through, he notes that they use Totex balloons. 800 gram
balloon to lift 3-4 pounds to 100,000 feet, and 1200 gram to lift a 6
pound payload to the same. The company that they buy the balloons from
has a website:

http://www.kaymont.com/pages/home.html

Checking on this website, you'll find that Totex balloons are indeed
made of natural latex rubber, as well as some other interesting stuff.

Back to the EOSS FAQ page, there are a lot of answers there. They also
go into costs, He versus H, power sources, and a lot of other stuff.

>>Since this happens so often, the authorities (FAA)
>>and the launchers of the balloons have worked out a system that allows
>>this to happen. A science balloon launch will just add one more to the mix.
>>
>>Another consideration is that the FAA no longer cares about the payload

>>after it has reached 60,000 feet. That is the top end of their "airspace".
>>
>>During launch day, you will call them at launch, at 60,000 feet when
>>they leave airspace, and on descent when they renter airspace at 60,000
>>feet, then again at landing. This means the balloon spends less time in
>>the path of harm than it might appear at first.
>>
>>As the payload grows in weight, the regulations become more involved.
>>While still relatively accommodating, it is a powerful incentive to keep
>>the payload light.
>>
>>How is this done? The payload is often made of a material such as
>>household insulation. Styrene insulation is quite light, and provides
>>good insulation against the cold.
>>
>>Small versions of electronics are usually used. In the quest for weight
>>reduction, cases are often stripped, and the chassis are mounted
>>directly on the foam. For VHF and UHF communications, not a whole lot of
>>power is needed for the transmitters. A 300 mw "credit card" HT is often
>>the transmitter of choice.
>>
>>Power being a consideration. Lithium batteries are the power of choice,
>>due to lightness. Anywhere that power can be conserved is worth looking at.
>>
>>I can go into Foxhunting techniques for landing, but I suspect most

Then again, I'm not looking for grouchy old farts. If a person is "too
(something)" for the project, then they certainly don't have to help.
There are enough people out there apparently like myself that are too
dumb to know that what we are trying to do can't be done.

It is also a big mistake to take my sales pitch and extrapolate that I
have a science fair mentality. A fair number of engineers have the
"grouchy old fart" problem. That's why they don't do a good job outside
of their respective fields. Ever have a crack engineer explain his
project at a sales pitch?

> I don't recall Mike ever saying the first ballon would reach 100,000, nor that
> he'd use latex weather ballons, or even helium, or whatever.

The first balloons won't even be free flying. My analysis of other
groups and the problems they have had at times indicates that payload
integration was and is a real problem. The device needs tested properly,
and not just on a bench.

You should have bracketed thge word "facts", Mike.

As was made evident by his post, precious little of what Lennie presented
was fact...Or should I say CURRENT...???

The disparity occured because, once again, Lennie tried to interject his
decades old knowledge (in this case his few non-soloed hours as a student pilot
in 1950-something...) where common sense should have directed a more prudent
man to keep his mouth shut and not display such ignorance.

Leonard H. Anderson is an idiot. It really is THAT simple.

But - Len wrote:

"I claim he can't do that...with those same "latex weather balloons."
Atmospheric density and pressure won't allow it and those "latex weather
balloons will burst below 50,000 feet."

So somebody is clearly wrong here.

>Kaymont has this to say about their Totex balloons:

Looks like Len is simply wrong about those "latex weather balloons".

Now ya done it, Mike. Proved Len to be definitively mistaken about something.
Of course, as W3RV says, he won't admit it.

>> Does La cucaracha know of Standard Atmosphere? It's in all

Diversion from the issue.

>> Did you see any estimates of weight, altitude, or ANY cost figures
>> presented in here? I didn't. I doubt anyone else saw them.

More diversion.
>
>Nothing beyond "surprisingly inexpensive". I'm not making a financial

Lessee - $50 for the balloon, $200 for the helium (assumming you need 1000 cu ft), $50 for other goodies, $100 for stuff I'm not aware of yet. That's $400 for the lifting system. Payload package, launch and recovery expenses not included.

Not pocket change but not a showstopper either.

It's a diversion, Mike.

>> "Concept" is just a hunch, a sort of emotional daydream of an idea,
>> ephemeral like a gas without those estimates.

>> Apparently these expert-knowledge balloonists can float on Will
>> and Idea, because others have done so before? Tsk.

Kaymont 1200 gram latex weather balloon, 100,000 feet using helium, carrying a six pound payload. Maybe a little higher with hydrogen?

That's not a concept - it's a proven reality.

Are you counting the "tsks", Mike? Maybe Len imagines himself as the ruling bull elephant, displaying his t[u]sks in a show of dominance.

Seems to me that my original statement about the problems still holds: The biggest problem may be getting permission to use the airspace. But it looks like you've got that one under control too.

>> If there's too much insistence on perfection, nothing can ever happen.
>There's
>> *always* another level of documentation, testing, analysis, etc., that
>could be
>> done.

All depends on how we define "satisfactorily". For example, suppose a project
demands that a system have MTBF of, say, 100,000 hours, as measured under
certain specified conditions. If a system is designed that meets that
specification, it's "satisfactory". 99,999 hours is not satisfactory, unless
the writer(s) of the specification rewrite it.

Of course if the design turns out to have MTBF of, say, 250,000 hours, that's
great - but only if it does not adversely affect other requirements.

>>>>>The posts that we saw earlier were the

> elsewhere.

You're taking it off onto a couple irrelevent tangents. The topic is how various folk who come from different educational, training and employment backgrounds approach the technical aspects of pulling off non-commercial stunts like sending homebrewed electronics packages to 100,000 feet with a balloon. Seasoned technical types degreed and otherwise learn out in the college of hard knocks how to plan and execute projects in highly systematic manners because when money is involved the project better be pulled off properly or yer outta work. That's the incentive. Beyond that we is what we is and we don't change our stripes when we get involved in the planning of off-hours volunteer efforts or our hobbies. Wherein come the clashes with the non-technical types we get involved with on joint efforts. Pick any mid-to-large scale Field Day planning session around here for a perfect example.

Yup.

> There are enough people out there apparently like myself that are too
> dumb to know that what we are trying to do can't be done.

Certainly it can be done. It's HOW you do the planning to get from
here to 100K feet which is the source of the grousing from us
technoids.

> It is also a big mistake to take my sales pitch and extrapolate that I
> have a science fair mentality. A fair number of engineers have the
> "grouchy old fart" problem. That's why they don't do a good job outside
> of their respective fields. Ever have a crack engineer explain his
> project at a sales pitch?

You jest!

Wannna hear about how this grouchy old fart pitched his radical design
concept for a big piece of machiney to Boeing about ten years ago?
Thought so.

Net result was that 8 months later and against eight much bigger gun bidders we had it running in the Boeing facility and they shipped the check for $1.5 million bucks. About a year later they didn't bother with the bidding process when they bought the second one based on the success of it's predecessor.

One of my brothers was a hot-shot engineer with DuPont early in his career and went on to retire as CEO and President of an industry-leading mechanical technology firm which he built from 550 employees and $55m in sales to 1,600 employees and $250m in sales in nine years. The engine behind the growth was the engineering department. Former CEOs didn't think engineers mattered much. When he took over the company he had *four* engineers. So he went out and hired several hundred more. Bingo. Jim has met that brudder, he knows . . .

Then comes my father's cranky old buddy John Glass who had both ME and EE degrees from MIT. John started his company on one end of my one of my father's shop benches. He was marketing and sales manager's worst nightmare but his company is now a division of Northrop-Grumman. John left a $55m estate.

But you're right about locking some engineers in the back shop under some conditiona and I've had to do that. The worst of the worst though are the unplugged engineers who stay in school all their lives and become "academics". I'll spare ya that rant, enough is enough.

Screw your web-based "analyses" nonsense, that's not a solution, that's a big piece of your problem. Get out from behind your nice comfy keyboard, pack the toolbox, gas up the car and link up with one of the experienced groups which is working on a high-altitude shot. Get yer hands dirty for a couple weekends and learn what's really up before you go at it yourself. That's close to the *first* move I'd make if I was into an effort like this.

In ballooning, the atmosphere IS your "bench."

Okay, you quoted a SALES PITCH.

Why didn't you do that with YOUR sales pitch in here first?

Have you actually USED that "Totex" balloon? Did you get to
100 kilofeet with one? [how did you measure that altitude to
"prove" it?]

>I can supply references upon request.

A big reference Professor named Langley once convinced the USN
that heavier-than-air flying machines were dandy things for the fleet.
He talked them into rebuilding a small ship into an aircraft carrier.
His first flying machine "flight" went right off the bow and into the
water, climb rate in the minus numbers. Langley remained a "wheel"
(with references) but a couple of bicycle shop owners did the first
heavier-than-air flight...without anyone "proving it could be done" by
websites or advertisements.

> Why the difference between a manufacturer of the latex balloons, and a
>documented user group, and your facts?

You tell me. YOU are the "manager" of this "concept."

Convice everyone you are without fault by your ballooning successes
to date.

>Nothing beyond "surprisingly inexpensive". I'm not making a financial
>report to the group.

No? True...you don't have to tell anyone anything, including what
you are going to "do."

Somehow I don't get a clear picture of all those "volunteers" just
waiting and anxious to give Mike Coslo TIME and MONEY to make
a "success" out of your "concept." Color me skeptical.

>If you want more, you could dig it out of some of the other posts. A few
>costs are in there.

Tsk. Standard newsgroup disclaimer. You expect others to go out
and do YOUR homework. All you have to do is outline your brilliant
and unique "concept" and the cheering is supposed to start.

> Ahem. I'm not required to provide financial data to you.

Absolutely true. You don't have to provide anything to anyone.

The project will be "inexpensive." The FAA is "accommodating."

"Others have already done it."

No sweaty-dah.

>>> And this is a bad thing - how?
>>
>> Well, you might actually get some balloons launched, and prove Len to be
>> absolutely wrong.....
>
> Yup. Despite his *tables*

Tsk. The Standard Atmosphere "table" was put together before
WW2. It is quite accurate enough for the flying community to use,
to calibrate altimeters as one example. Refinements of the data
have continued, including computer modeling to make it easier to
use in other analysis programs involving aerodynamics.

The first question that comes to mind is: How accurate are the
claims of amateur balloonists' altitudes? How is that measured?
[Note: An on-board recording barometer would have to be precisely
calibrated against - guess what - those pesky Standard Atmosphere
"tables!"]

SpaceShipOne's altitude was measured by NASA radar; Dryden
is conveniently very near Mojave International where Scaled
Composites has its company and uses that old Marine Air Base's
airfield. Radar ranging from China Lake Naval Weapons facility is
a bit south of Edwards but they can "look up" just fine. Before
you claim (in triumph, of course) reaching a certain height, you have
to establish some bona fides about actually reaching an altitude by
being able to cite the measurement capability.

>> And perhaps you can't do it *all by yourself*. But you don't plan to - your
>> method is to assemble a team, not be the sole basement inventor.
>
>Right, I have no intention of doing it by myself.

Right. Get everyone ELSE busy taking care of those pesky details
like "work" and budgetary support. Concept managers don't have
to sweat anything.

>Weather people often send balloons of the latex variety into the
>atmosphere. Why would they not often send them to 100,000 feet?
>
> a. Because the balloon is made of latex, and will not "go" that high?

Tsk. Because those surplus 8-foot-diameter (or so) balloons which
are implied probably don't have the elastomeric characteristics they
might have had when new. Those are fine for parties and such at
surface altitudes but are NO guarantee that they will work at 100,000
ASL with totally frigid temps and way-low pressure and atmospheric
density.

No problem...you have all these websites to "prove" you are absolutely
good and true and without fault in messaging. :-)

> b. Because there isn't enough "lift" to take a payload that high

Maybe, maybe not. Ask the Commerce Department, ask NOAA,
whoever. Look for ANSWERS from the pros who do that kind of thing,
not some ballooning morsemen.

Some high school geometry and those nasty, pesky figures from the
Standard Atmosphere "tables" can help you make some simple
back-of-the-envelope APPROXIMATIONS of lift capability with
various balloon volumes and various available gasses (other than
the hot air from PCTAs). That gives you some CREDIBILITY on
doing your own homework. Successful managers DO that sort of
thing...finalized, refined calculations are left up to specialists.

> c. Because most of what they are interested in takes place at lower
>altitudes.

You are starting to show promise of thinking for yourself.

> d. more financial information please... 8^)

Successful managers are able to contact the specialists and pros
of a particular technology to get that...and should have some of that
background data available before pitching the "concept management"
pipe-dream.

>> There are some old-school folks whose idea of "encouragement" is to tell you
>> you're no good, your ideas cannot work, that you don't know what you're
doing,
>> etc. The idea is that you'll somehow be motivated to prove them wrong, and
will
>> succeed in order to do so.
>
> Do you think this is encouragement? Not that it matters.

If you are spending OTHER folks' money (such as sponsors) or OTHER folks' TIME (the unnamed volunteers doing all the dirty work), then you'd better have your ducks at least partway in a row before committing.

If you want to get pouty, petulant, and pejorative-laden towards anyone demonstrating common corporate design review practices on your noble, imaginative soul, that's your own problem. Your "concept" is not unique nor is your application unique...free ballooning in the USA has been going on for over 200 years and those other websites "prove" that others have been "doing science" (NASA's phraseology) already.

Design review meetings are done to make certain a project will make a profit, the most profit, for the company. The emotionally self-centered usually have a very hard time in those because "they thought of a particular thing and that is without fault and the 'best' one to use" and are then freaked out by several other 'suggestions' which are cheaper, simpler, or just plain better all-around. Those folks don't last long in projects. To do "managing" of a fair-sized budget hobby project involving others time and energy, you have to demonstrate some capability other than passing a morse code test...like knowing a FEW details about this ballooning thingy, approximate monies involved, appropriate federal and local laws met, and so forth.

If you need all this psychological stroking BEFORE committing, try looking at some of the successes in the past. A couple of bicycle shop owners-brothers worked for years and years on making a flying machine, pretty much in isolation. They got their ducks in a row on what terribly little "science" of flight was known by anyone [built their own wind tunnel to get an idea of airfoil shapes and lifting capability, as one example] They did their first, very short flight of a heavier-than-air flying machine 101 years ago. Few folks other than the Wright's sister offered any solace or ego sustenance for years and years of working out their first problems.

>> And success is not guaranteed.
>
> Which of course, makes success all that much better. It's like the
>difference between a complete appliance station, and one where as much
>as you can do yourself has been done.

So far, Mr. Concept Manager, you have NOT done it.

Try not to get all pissy about others not cheering your "success."

>> You may fail, Mike. Worse, you may succeed!
>
> Failure is not an option..... ;^)

You don't have a gene stamped with "Kranz" yet.

Oops. No, Toronto is not in Alberta. Unless somebody moved it.

In a former life in the early 1980s I commuted back and forth between
Philadelphia and Toronto weekly on biz for six months or so.
Interesting place, interesting folk. Anyone who thinks Canadians are

"just like us Yanks" needs to spend some time in Canada, eh? (heh). I ran into a great blonde in the Toronto airport terminal who was a Mountie. Told her didn't look much like Sergeant Preston to me and asked her where her horse was. She asked me when I was going back where I came from.

> Write your Senator in support of HR 5361.

>>> NAVASSA (KP1) & DESECHEO (KP5) <<<

The following is a summary of recent releases circulated by Carl Smith, N4AA (Editor of QRZ-DX), Bernie McLenny, W3UR (Editor of The Daily DX) and Michael Thomas, NA5U (Lone Star DX Association).

US Congressman Nick Rahall (Democrat of West Virginia), ranking member of the U.S. House Committee on Resources, has agreed to sponsor a bill that in effect would force the US Fish and Wildlife Service to allow occasional DXpeditions to either Navassa and Desecheo. The FWS has heretofore turned down every recent DXpedition effort to these places based on what the bill's sponsors believe to be erroneous interpretation of the law governing wildlife refuges. The bill, which is co-sponsored by Congressman Richard Pombo (Republican of California), was introduced on 16 November as Bill # HR 5361.

This is the result of a group effort led by attorney Brad Farrell, K4RT and Michael Thomas, NA5U. At least 30 other DXers and a number of DX groups are assisting to move the legislative effort forward.

DXers all over the US are invited to contact their respective Congressmen as soon as possible, and ask for their support of Bill # HR 5361. A sample letter can be found at http://www.dailydx.com/int2E.DOC. You can find your Congressman's name at http://www.house.gov/writerep/ and his snail mail address at http://clerk.house.gov/members/index.html.

Brad Farrell, K4RT has also filed an appeal with a federal court, seeking review of the agency's closure of the islands to amateur radio. Judicial review will be prolonged and costly, and the Lone Star DX Association, the primary DX organization associated with this effort, is helping raise needed funds. As the host organization for the project, the LSDXA has donated $500 to a fund it will administer to help pay for the costs of moving the effort forward in Congress and in court. If you or your organization would like to help, please send your donation to the Lone Star DX Association c/o Jim Bass, K5KQI, 2709 Monarch Dr., Arlington, TX 76006. Mark your donation for the "Navassa-Desecheo Project." News updates, additional information and resources can be found at http://www.dxer.org/.

The restructuring where the FCC desired fewer license classes rather
than his desire of more license classes. That's also when he started
the "No Test International" strawman.

Ideas and concepts are important. I think Mike will actually do
something with this. At least I hope he does.

> Geez...only a few of them know the Standard Atmosphere and
> they want to get all up-in-the-air about Grande Concepts! :-)

Has anyone in PA signed on yet, or is Mike still in this all alone?

I'd sign on but College Station is about 7 hours away.

> Not to worry. They are all "managers" in radio and can order

That's not what's needed to get a balloon and instrument package to
10mb.

> They all passed a high-rate code test, therefore
> they are Expert at anything they talk about, having lots and lots
> of "authority."

Lots of cooing going on right now. You'd think there were a mourning
dove convention going on.

Meanwhile, if they launch in the summer, they'll have slower upper
level winds and the balloon won't go as far. That would be a good
thing.

> Okay, you quoted a SALES PITCH.

I quoted what the named group uses, and then did research at the site
they bought their balloons at to ascertain what those particular
balloons were made of.

> Why didn't you do that with YOUR sales pitch in here first?

There is a need to work out a protocol for balloon launches. But aside
from that, the use of latex balloons and the altitudes achieved with
these balloons is pretty well documented. Believe or do not. If you
don't believe me, then you don't believe a whole lot of people.

Besides, even if I did, your next statement indicates that it would not
have mattered.

> Have you actually USED that "Totex" balloon? Did you get to
> 100 kilofeet with one? [how did you measure that altitude to
> "prove" it?]

Whattya think? Think this is a good question point? Are you really so skeptical that you accept NOTHING as reliable?

If you believe that the EOSS is lying, and that Kaymont is engaging in false advertisement about a product that they have produced since the 1940's, take it up with them.

>
>
> You tell me. YOU are the "manager" of this "concept."

THe difference is that you are incorrect.

I suspect that part of the confusion is that most weather balloons are sent to a much lower altitude than what NSS does. The reason is that almost all the weather occurs in the Troposphere (and below) They are sending the balloons that high, because that is the area that they are interested in.

This does not mean that the balloons can go no higher. The maximum height that can be attained is a function of the maximum diameter that the balloon can attain without bursting.

Contributing factors to this are the weight of the payload, which influences how much of the H or He has to be put into the balloon, and the needed amount of lift. More weight, more lift gas. Higher lift for faster ascent means more lift gas. Since the balloon will be inflated to a larger diameter at launch, it will attain maximum diameter before burst at a lower altitude.

> Convice everyone you are without fault by your ballooning successes
> to date.

So strange a comment.

>>Nothing beyond "surprisingly inexpensive". I'm not making a financial

Are you telling me to shut up again? Otherwise I have a little trouble
making sense of that statement.

This was not about the financial aspects of the project anyhow. It was
in response to Hans' thread about the ARS being marginalized. Its a new
project.

> Somehow I don't get a clear picture of all those "volunteers" just
> waiting and anxious to give Mike Coslo TIME and MONEY to make

> The project will be "inexpensive." The FAA is "accommodating."
>
> "Others have already done it."
>
> No sweaty-dah.

If you google up the parts of the thread where I was providing
"references" you could confirm the veracity of those statements for

yourself. But you won't.

And you are still incorrect about latex balloons reaching the 100,000
foot altitude.

Latex.
Helium *or* Hydrogen.
100,000 feet.

Its happening.

Not quite 88s.

From the "Western Union 92 Code" - 134 means "Who is at the key?".
Pretty much the question that Jim seems to be pondering - I'm just
restating it telegraphicallyfor him..... :)

>
>
> And the research says?

My initial research leads me to believe that it is possible to inflate and release a latex balloon carrying a payload into the Stratosphere.

This is based on the published results of other groups that are doing this sort of thing at this time.

This is also based on correspondence with two people experienced in launching similar balloons.

Mt initial research leads me to believe that it is possible to incorporate into that payload, several devices, including a GPS, various Amateur radio transceivers, and cameras. This payload may be controlled by various electronic control systems. Many are using a "Basic Stamp" processor. This research also leads me to believe that by using a packet radio system, the information from the GPS and other sensors may be transmitted to a computer that can keep track of the payload.

This is based on what others are doing at this time, and some basic radio knowledge and knowledge of size and weight requirements and known equipment that fits the requirements.

My initial research leads me to believe that I can construct a payload that will adequately protect the equipment from the low temperatures encountered in this area of the stratosphere.

This is based on what others are doing at this time. Although more extensive calculations might be performed to find an ideal amount of insulation, it must be noted that those projects that are using simple insulation such as foam sheathing are not experiencing cold related failures. This leads me to conclude that at worst, a derivative sort of payload container might be made and operate successfully.

If for some reason more research was needed an experiment might be arranged where the payload was packaged in Dry ice for say 5 hours -

this would be much longer than any anticipated mission, and with dry ice having a temperature of around -109F, we could make a reasonable approximation of the altitude conditions, temperature- wise.

My initial research leads me to believe that small science experiments might be performed on this payload, as long as the aggregate weight is within payload limits.

Yeah, you know.... people blah blah blah.

My initial research leads me to believe that this can be achieved at a reasonable cost. Reasonable is quite relative, of course, but with 40 dollar type prices for balloons, and around 50 dollars per launch of helium, (less for hydrogen) the relative inexpensiveness of payload construction materials, and that except for the unexpected loss of damage of a payload, the payload parts are multi-mission, the price per launch can be kept in the 200 dollar range. If used/donated parts can be utilized, the cost can be reduced even more.

Note that I am not trying to advertise this as some sort of el cheapo project. When I say surprisingly inexpensive, I mean that at least in my case, I would have guessed that this sort of thing would have cost many thousands of dollars per launch. It doesn't appear to. If it would cost us that much, we are doing something different than the other folks that are doing this.

My initial research leads me to believe that the powers that be do not place undue restrictions on these launches.

I conclude this by the relevant documents that are issued by the FAA, and the accounts by the people that are doing this sort of thing.

Lessee, there is a first person/second person shift in there, so I
wasn't sure how to answer.

But I'll take a stab. I would think that most everyone here - in fact
most everyone everywhere - gives daily pronouncements on things that
they have not done.

It isn't a problem. While there is nothing like first hand experience,
there is nothing wrong with acquiring knowledge from references and
passing it on. Otherwise how could people "know" that a bullet fired
from a gun will do bodily damage. How would they know that potato chips
taste good. How would they know that if they stuck their head underwater
and took a deep breath, they probably wouldn't like the results We HAVE
to take some info as real without experience. We cannot be skeptical of
everything, every waking moment.

I should clarify this statement. I know that brakes stop cars. I know
that it is a pretty straightforward calculation.

My point is that it is a few square inches of material that is stopping
a big car. It isn't necessarily intuitive that it will do it.

And as you say, Jim. People are doing it, so it works.

> Three words: Eagles tailgate party.

I don't believe that people have Eagles tailgate parties! Can't be.
I've been to Philadelphia many times, and I have not seen one Eagles
tailgate party. Besides, the owners of the stadium would NEVER allow
tailgate parties in the parking lots outside the stadium. The liability
issues would be tremendous. Besides, you need to produce the
calculations that show that you could pack people into a car, add food,
and set up and feed them outside the stadium. How many Eagles tailgate
parties have you put on. You cannot comment on an Eagles tailgate party
unless you have attended and put on on, which you can't do because they
won't allow them anyhow.

Whoeee, now that's a vent! But it does illustrate some of the
frustration I experience while on this subject. I'd love to discuss the
various facets of the project, the equipment, and the policy aspects of
it. (remember this whole thing was brought up in a policy context)

But I can't do that because of the insistence by some that I and others
can't do it for one reason or the other. This in spite of my addressing
every concern.

Some do use morse telemetry. Oddly enough, they translate it with
CWGet. I'll probably use packet for telemetry.

Now morse QSO's are a possibility.

The smiley was because that was the old Gene Kranz quote during the
Apollo 13 mission. I thought it was a bit fitting.

Sorry, Brain. No "promise" was made.

You are encouraged to re-post any such assertion.

> He breaks his promise.

No promise was broken. You are again encouraged to repost the
item where a promise was made.

I did put you in the spam filter. So far, I count over 78 posts
authored by "billybeeper@juno.com" that were directly filtered out.

I cannot "filter" quotes by other posters unless I KF them, too.

I do, on occassion, read a post for follow-up via Google. (ie:
this one) I never "promised" to not respond to any given post.

Please prove otherwise or be man enough to admit to yet another
lie, Burke.

>That's our Steve.

I have been many things, am many things, and will be many things
in my life.

"Your's" will NOT be one of them.

You continue to lie and mislead. My decision to KF you was more
than adequately substantiated.

Brian P Burke, N0IMD, continues to lie and mislead, refusing to live up to his own demands and rhetoric. What a scumbag.

Steve, K4YZ

Wrong.

All he has to do is comply with the law and indicate in his organization's solicitation that they also sponsor the scholarship with the donations. He needs to DISCLOSE this fact in his solicitation. Currently, he doesn't.

I'm not trying to make him stop offering the scholarship. Where did you mistakenly pick up that idea? I never said that.

If you even had 1% of a brain, you would have realized this long ago.

And the "ARRL endorsing Kerry" relates to that how?

Your statement above simply PROVED to every reader that you are a complete idiot, not that many had any doubt before the posting....

Good. The spammer finally bites the dust. Goodbye and good riddance.

2119. New Kennedy assassination audio!

Newsgroup: rec.radio.amateur.policy
Date: 2004-11-22 09:49:29 UTC
From: brad.johnson@turner.com
Message-ID: <af57b211.0411220149.50f0ac1f@posting.google.com>
Source record: 100017

I am looking for TV and radio broadcasts of the JFK and RFK assassinations. I am particularly interested in audio recordings of such broadcasts made by amateurs.

If you personally tape-recorded or obtained -- or know of anyone else who tape-recorded or obtained -- any television or radio broadcasts concerning one or both of the two Kennedy assassinations in 1963 and 1968, please contact me.

Whether it's a network or local broadcast, whether the sound recording of that broadcast is of good quality or poor quality, whether it was recorded in a major market or in a minor market, I want to know about it.

I'm a collector, so if you have any of this or know about someone else who does... please email me or have them email me at:

bkj333@aol.com

Thanks!

And why shouldn't he have said that? His stations works. It's fully
functional and therefore doesn't have any operational deficiencies. :-(

Granted, I'm ignoring the content and jamming issue, but the FCC really needs
to come out and say directly what they mean - not using language which can be
sidestepped. He "addressed" the deficiencies by saying that there are none
(implying that his equipment is working perfectly). Poor operating practice
does not equate to deficient operation of the equipment.

> In addition to the above mentioned complaints, we have received

Which practically never gets prosecuted. The U.S. Attorneys, nationwide,
usually don't even bother with more than 3 cases of 18 USC 1621, Perjury - the

"stronger" crime, a year, so they certainly aren't going to bother with this provision. The failure to enforce the law makes 18 USC 1001 a joke.

Riley has really scared him now.

Heh - I can picture that! Bet she never heard that one before..... :0

Seriously, though, in downtown Toronto in the 70s, I frequently had
tourists stop me and ask where they could see an igloo (2,500 miles
north would be a great place to start!) and where all of the trees
were (!).

Doesn't seem to happen much anymore - maybe the Internet fixed that!.

There is one really big problem you cannot avoid, though....

Here in EPA, a *lot* of the land surface area is either wooded or developed. Or water, paved road, etc. This isn't prairie country, like where most of the launches take place.

The chances that you'll be able to recover the package are adversely affected by this. If it hangs up 60 feet in a tree, or on a power line, or on top of a building, it's probably gone forever.

Doesn't mean it can't or shouldn't be done, just that the risk is greater.

>You're taking it off onto a couple irrelevent tangents.

No, completely relevant.

There isn't much real "engineering" in the hard numeric design sense attached to doing what KB3EIA proposes. It's like adding a room onto a house - you wouldn't do a complete stress analysis of every stud and joist, nor a fluid dynamic analysis of the plumbing just so you could have a half-bath on the ground floor.

>The topic is
>how various folk who come from different educational, training and

>execute projects in highly systematic manners because when money is
>involved the project better be pulled off properly or yer outta work.

Which is not the same factor here.

In business if ya signed the contract to deliver X on date Y, you better do it or bad things will happen. In this balloon thing, a delay of weeks or months is no big deal if the result is success rather than failure.

>That's the incentive. Beyond that we is what we is and we don't change

Didn't get past me. Leo sez he's a VE3. But no call, no last name, no positive ID, no website, no outside confirmation. Maybe he is, maybe he ain't.

>> Not that there's anyhting wrong with that!

Nonsense. Ghostwriters do it all the time. Len's done the pseudonym thing here more than once - that we know of.

>Leo absolutely is not Sweetums. Or vice versa.

Maybe. Maybe not. I'm not losing any sleep over it.

So what?

Come to think of it, you might be N2EY, or you might not be. No positive ID, no website, no outside confirmation. Maybe you're just another of Len Andersons screen names. Or you might be VA2QRU/VE7JPN, Masataka Noda.

Who cares?

Baxter is here to stay, guaranteed.

Once again for the dense crowd out there.

IF K1MAN goes, THEN W1AW IS GONE TOO!

Live with it! Baxter is doing nothing illegal. Whats more,
he has the money and legal team to back him up.

Riley is a paper tiger, full of BULLSHIT.

Source record: 100028

On Mon, 22 Nov 2004 09:51:47 GMT, D. Stussy wrote:

>He "addressed" the deficiencies by saying that there are none
>(implying that his equipment is working perfectly). Poor operating
>practice does not equate to deficient operation of the equipment.

In FCC practice, "operation of the station" by a licensee covers
more than mere operation of the equipment and does in fact include
operating practices and non-technical rule compliance.

>The U.S. Attorneys, nationwide, usually don't even bother with more
>than 3 cases of 18 USC 1621, Perjury - the "stronger" crime, a year,
>so they certainly aren't going to bother with this provision.

Unless the agency has an IOU which it can cash in.

>The failure to enforce the law makes 18 USC 1001 a joke.

It doesn't make the law a joke - it makes the U S Attornies a joke.

Don't get me started on what cases they will or will not take, and
for whom.... <ggg> If it wasn't for the "retirement annuity offset
provision", I could have been a Special Assistant U S Attorney
handling monetary and asset forfeiture cases for the FCC after I
regained my failing eyesight (one of the reasons for my retirement)
several years ago.

>Riley has really scared him now.

Look at it from the aspect of an attorney-advocate.... if the
defendant-client is put on actual notice but does the proscribed
action, and for some unique reason the prosecution decides to make
an example out of him or her (cash in the agency's IOU) what defense
can the defendant raise? The defense of latches does not apply in
criminal matters - the fact that the above may or may not happen
or that others do it with no punishment can't be used to justify the
violation.

Add to that "lack of candor" is one of the main reasons why a
license is suspended, revoked, denied, or not renewed. As long as
that is available, the U S Attorney has a hook to wiggle out of
doing his or her job.

>What's wrong with this Hamfest announcement?

Are you refering to the fact that it's held in one of the southern island provinces of the Philippines, or that they fail to render oaths and allegiance to Hans Brakob?

Or perhaps it's the FCC VEC testing...???

Had you been to the RP you'd know there are a great number of US residents who hold dual citizenship, and VE testing is routinely held outside the territorial limits of the United States for their benefit. However this is also a moot point since US citizenship is not required for FCC licensure.

Furthermore, review of FCC rules and regulations does not specifiy where VE exams must be held. It does require prior public announcement of testing to be held, and it would appear that this announcement meets the test of US law.

Therefore, there seems to be nothing wrong with the announcement.

Your point was?

Steve, K4YZ

I've been discussing this with one of the partners. The packet will
give us one more level of redundancy, since we can have people that have
internet access during the flight look at the position with APRS.

>>Now morse QSO's are a possibility.

Everyone gives me usable input. Brian Burke has given me really good
input, Len and other Brian have too. I can take the advisement as what
happens when you interact with people that expect (want?) you to fail.
This helps, believe it or not.

It is a much bigger risk. The worst case scenario is a payload that lands in the north central part of the state. There are some areas that are darn near wilderness there. So I/we have to be prepared to do some serious hiking under a few circumstances. That's okay - it doesn't bother me a bit. Hiking in Pennsylvania is a gift.

I don't know if you saw the link from the people in Mass.? A couple of their payloads landed in the *big* pond!

Nope.

You can check out who I am. Others here, including you, have worked me
on the air or met me in person.

For example, you can dig up *any* old SS log where you worked N2EY,
and I can tell you the date, time, band, and exchange.

> No
> positive ID, no website, no outside confirmation.

Actually I do have a website, and outside confirmation.

Steve slaps D with the glove again. Yet another ultimatum is given
(and I thought untimatums were ultimate).

Will D put up?

Will D shut up?

Will D simply ignore Steve's God-like authority?

Is Steve really "THAT simple?"

Stay tuned for more of the same.

Steve, in your third to the last post to me on November 7th, you said
that I was "kill" filed, and that you would see me at Dayton. You
gave the definite impression that you would have no further discourse
with me until Dayton. You don't need to preface a statement with "I
promise" in order for someone to think that you have given your word,
or that you might keep your word. Or perhaps you do.

Then you post to me again and again.

Is your word no good?

I think not.

>bother me a bit. Hiking in Pennsylvania is a gift.

Of course. Just don't do it during deer season.

(moment of silence for the Wisconsin tragedy)

>I don't know if you saw the link from the people in Mass.? A couple of
>their payloads landed in the *big* pond!

Loss of a payload is one thing; it's bad but if you make the payload
inexpensive enough, it's not a big deal. An acceptable risk.

OTOH, I can imagine the payload landing on a power line and causing an outage,
or even a fire. Or landing on a busy interstate, somebody's house or business,
etc. Not the kind of publicity ham radio needs...

I wonder if it might not be more desirable to launch with the *intent* of the
payload coming down over water. Like Chesapeake Bay. Should not be hard to make
it float.

Steve, could you point out to me where this "render oaths and allegiance" bullshit comes from? Had to double check and make sure the post didn't come from Len Anderson!

>
> Your point was?
>

If you have to ask, you probably won't "get it", but I've got a hot news flash for you. Those fellas taking the FCC tests at DU and JA hamfests aren't dual citizens of DU (or JA) and Saipan, they're souveneir collectors and reciprocal-licensing cheats.

There are a small handful of "will-call" PO boxes in KH0 and KH2 which are the "home address" for hundreds of JA and DU citizens. (What do all these calls have in common? KH2O KH0JQ KH0JU KH0KW AH0BB KH0BZ KH0CG KH0CQ KH0HQ KH0HZ WH0V NH0F WH0B WH0C AH0AS AH0AU KH0CN KH0DD ......and I could go on for hundreds of desirable KH0/KH2 call signs held by foreign nationals who've never set foot on Guam/Saipan/US soil and likely have no intention to ever do so.)

Here's how it works. DU1XYZ or JA1XYZ knows a guy on KH0 or KH2 and has him rent a PO Box. Then he gets himself and a couple of buddies a W5YI VE certificate and holds exams. Applicants are given the KH0 or KH2 PO Box address (for a "consideration") and "bingo", they have their souveneir US call sign. Over half of the KH0 and KH2 2x1 calls have been scarfed up by JA's and DU's. Meanwhile some kid on Guam or Saipan who upgrades to Extra has to wait until a JA or DU fella croaks over to capture a desireable call, unless some other JA or DU captures it first for a souvenier.

Besides "souveniers" I mentioned reciprocal-licensing cheats, which is a primary reason so many KH0/KH2 calls go to JA's..... Because JA only has reciprocal agreements with a dozen or less countries, a US license is an essential tool for JA DXpeditioners --- let's say they'd like to do a DXpedition to V7 or VP9 . Their JA license is useless, but let them flash a KH0 license and wham, he's VP9DX with no questions asked. Meanwhile some kid on Guam or Saipan who upgrades to Extra has to wait until a JA fella croaks over to capture a desireable call (unless some other JA captures it first for his reciprocal-cheat scheme).

That's also correct.

But now that all the KH2 and KH0 extra calls are gone, the JA's are
having to suffer with continental U.S. calls or Hawaii calls, poor
babies. N3FW, AD7AL, NB6A, NH7IG, KK2H, K8VR, N1VF, etc.

No, Frank Wilson, you can't get your intials for your call sign, even
though you do REALLY live in Maryland. You have to wait until Fujimoto
Wazawari in Tokyo dies and then wait two more years.

My favorite at QRZ.COM:

"KK2H - Please send QSL to my home call, JL1UXH. If you send anything
to the address in the U.S., my cousin has to forward it to Japan."

That sucks. Hate wasting good Yen buying U.S. stamps.

The official position of the WTB in Washington, D.C., when I talked to
them on the phone about all of the above and a few other questionable
items a few years back was:

"It's not our job to verify addresses. It's our job to issue
licenses."

Which they continue to do, to anybody that wants one and who
passed a "test"....

So..... Any U.S. address + V.E. "exam" in a foreign country
(administered by foreign nationals who could never be extradited to
the U.S. to face charges for holding "funny" exams) = U.S. Extra Class
Souvenir Call Sign and International Reciprocal Radio Passport.

Good system. A U.S. V.E. makes a mistake on the paperwork and the FCC nails his nuts to the wall, but nobody notices when Yoshi, Toshi, and Schosi send their paperwork in from Japan.

W5YI or the ARRL make six bucks everytime a JA gets a U.S. license at a VE test held in Tokyo, so everybody is fat, dumb, and happy. Turn your head, cash the check, ten more extra's, what the heck......

Welcum to the Wunnerful Werld of Ham Radio. Nobody cares.

At least the FCC did do something about club calls. They took 42 of them away from a JA few years back :-) But for some strange reason, they let him keep his primary station license, a W9 extra class U.S. call.

Foreigners have been able to get US licences for many decades. I'm one.

Only representatives of a foreign government can't get a US call. Try
reading Part 97.

So WHO CARES, HANS...?!?!

They have to pay the same fee that any other examinee has to pay, so what does it matter to you?

I reiterate my previous observation...UNITED STATES CITIZENSHIP IS NOT REQUIRED FOR FCC LICENSURE.

They've been holding VE exams in Europe and the former Soviet Union since the 90's, Hans. Where was your righteous indignation then...??? A bit displaced since the inhabitants of Europe are essentially of the same ethnic background as you...???

>There are a small handful of "will-call" PO boxes in KH0 and KH2 which

>I could go on for hundreds of desirable KH0/KH2 call signs held by
>foreign nationals who've never set foot on Guam/Saipan/US soil and
>likely have no intention to ever do so.)

Again, WHO CARES...???

The present callsign system has been in place since 1978 now...If those calls weren't already taken by American nationals, chances are they won't be any time soon anyway.

>Here's how it works. DU1XYZ or JA1XYZ knows a guy on KH0 or KH2 and has

It's the price we pay for living in a society that insists on extending it's "rights" to everyone who is NOT a citizen, Hans. There have been numerous attempts to reign in those "rights" to the exclusive ownership of US citizens or foreign nationals legally landed on US soil.

With rare exception, every attempt to do so has failed as a result of the liberal courts...The same courts that demand that the government "play fair" by publishing the verbatim questions and answers to licensing examinations for a wide variety of pursuits.

That's why a pregnant illegal immigrant can wade across the Rio Grande just in time for Junior to make an appearance, and since he landed here and not in Juarez, mommy get's to stay too.

>Over half of the KH0 and KH2 2x1 calls have

>for a souvenier.

"Over half", eh...???

Well, you didn't specify a number, so let's just use "half" (50%) as a nice round number to work with.

There are four available prefixes in 0 and 2 each...AH, KH, NH and WH. That's 104 potential 2 x 1 calls on Saipan and 104 on Guam.

Unless Amateur Radio suddenly takes a big upward turn, I don't see there being a big rush on them.

I went thru the KH0x block...all 26 of them...Exactly 10 of the calls were non-WASP names with "post office box" addresses. Three were unassigned. The other 13 calls belonged to people with "stateside" addresses or addresses that appeared to be valid "local" addresses.

You did a bit better in the AH0 block, Hans, but only by 1...Here we had 11 going to foreign national appearing persons, 8 to persons with CONUS or "local" sounding addresses, and a grand total of 6 unassigned callsigns. I missed one somewhere but once through was enough for me. I'll give you that one, but it's still less than your "over half" assertion.

You finally met your goal in the NH0 block...18 of those calls were to foreign names via post office boxes...5 were CONUS or "local" while three were unassigned.

It was a bit questionalble in the WH0 block. Nine were clearly non-US licensee's. Five were clearly CONUS based holders, while five more I classified as "questionable" because the addresses appeared to be "local" boxes, but I couldn't find any corroborating evidence one way or the other (e mail addresses ending in " dot jp", photos of QSL cards with a foreign address, etc.). However there were 7 callsigns that were "not in the database"...in otherwords, unassigned.

I skipped going through the KH2 calls...I imagine I will find similar results. And forget the 2 x 2 AH0/AH2 calls. That's more fun than I care to have in one sitting.

However, just for grins and giggles, I started in on the AH0 2 x 2 calls...I only got to AH0AM...1/3 of the calls were either abandoned or were held by persons living off-island (read that on Hawaii or in the contiguous 48...). Only 3 were held by persons with names that weren't "traditional" WASP names and had the boxes you described. The rest were folks on-island.

So...that means that if we can use this sampling as a basis for survey, the available 2 x 2 Extra Class calls falls far short of your suggestion of "...more than half" being in foreign hands (acknowleging that you specified "2x1" at one point, however noting you also lamented the numerous 2 x 2 calls held by foreign nationals at the top of your rant)

The final results...?!?! Clearly less than your assertion of "more than half" of the "desireable" 2 x 1 callsigns are in the hands of persons not residing on Saipan.

Care to try again?

>Besides "souveniers" I mentioned reciprocal-licensing cheats, which is a
>primary reason so many KH0/KH2 calls go to JA's..... Because JA only

Perhaps you'd consider a Constitutional Amendment that restricts US rights
and privileges to US citizens or persons legally landed here.

The FCC has already decided that it's proper for foreign nationals to have
US license if they complete the prerequisites for that license and exercise it
within the parameters of Part 97.
Citizenship is not one of them.

Specific callsigns would be discriminatory under present US
interpretations of the Constitution.

Perhaps. But do we know "for sure" that all those people are truly not residing here, Jim? Or they NEVER visit US soil and use those calls?

QST, CQ, etc are replete with stories of AMERICAN Amateurs scoring "souvenier" calls. Why teh double standard over foreign persons who do the same with American calls?

Do you (or anyone else) know for sure that these tests are not being held in accordance with expected professional conduct, Jim? Hans' first post seems to indicate that the test was being announced (and one would have to assume) in accordance with FCC requirements.

Are any laws being broken?

And in both call areas. Granted, there are only four 2 x 1 KH2 calls left
(AH2L, AH2Q, WH2H and WH2M), but they are there none-the less. As I noted in
my other post, there are quite a few KH0 calls available..

I spot checked a few calls in the 2 x 2 "AH2" group, and found all of them
to be available, including AH2YZ.

I note with some irony that many of the 2 x 1 calls from KH2 were listed
as CONUS calls to WASP-sounding names. This included one in Florida, that same
person also "sponsoring" a Japanese sounding person's Guam-based address.
Wonder who's picking up THAT mail...???

Or KH6. I recall a ham on Hawaii who loaned out his PO Box to Mike
Deignan. Same ham had a Guam call, never lived on Guam. Said he had
a job offer there that never panned out, and got the call in "prep"
for moving there.

Steve is right, though.

Discrimination against resident aliens has been prohibited since Yick Wo v Hopkins, which relied on the equal protection clause of the 14th amendment.

The facts of the case related to legislation against laundries being constructed from wood in downtown San Fancisco. This law was overturned as it was held that it was written only to discriminate against laundries owned and operated by Chinese citizens.

Arguably, the equal protection clause of the 14th amendment only applies to the states, but there are cases invoking the due process clause of the 5th amendment, which is applicable to the federal government.

I beleive there was a Puerto Rican case in federal district court that relied on either the 5th or the 14th in the alternative, allowing aliens to become registered as professional engineers. I don't have the citation for that one.

This is a little way off Phil Kane's speciality of communications law, although no doubt the FCC can't discriminate against aliens. Maybe Phil knows of some case law regarding aliens and the FCC?

I am not a lawyer, just an alien.

I don't like this setup any more than you do, Hans.

But how is it a cheat?

Is it because those fellas never set foot on US soil, but hold US licenses?

Regardless of the legality, I know a lot of hams in CONUS who'd be ticked off if they couldn't have a 1x2 because those fellas elsewhere in the world had scarfed them all up.

-------> HIT THE ROAD TOAD ! (PFHBLTTTTT!!!!!!!!!!!!!!)

ps: Have U tried that new Coke yet? Tastes like it was fresh-squeezed from
a big, fat
diabetic house cat, fortified with corn syrup and chilled. Mmm, dat's
some mighty fine pee! Impudent, yet with a bold aftertaste. And just get
a whiff of that bouquet! Eau de Dialysis!

Thanks, Alun. Not a single word about the use of Morse Code in any of the
original posts, yet PuppetBoy cites one of Hans' trolls responses arguing about
hijacking a thread about Morse Code use.

He wonders why I call him an idiot.

Steve,

Do you mean the character or the actor? I ask because, IMHO, there is a
fairly well-known Ham who bears a striking resemblance to that character.

Oh yes! The first flight or two will be as much figuring out a
protocol/training for balloon launching as anything else. Payloads will
be minimal.

Spot-on! This is not a spacecraft that must be insulated in
anticipation of a long duration mission. As long as the insulation is
sufficient to keep the payload within it's operating temperature
envelope for the duration of the flight, we are in good shape. And since
some of the balloonatics are reporting slight internal temperature
rise during the flight, I am not anticipating major problems in this area.

My biggest concern is humidity. Nice saturated Pennsylvania humidity
heading from say 85 degrees to well below zero. Visual ports may just
become blocked with frost, as well as antenna connectors - anything
that might be cold could possibly frost up. There will be extra helium
left over, so we may design a method to purge the payload.

Remember that the APRS signal from the Packet transmitter will allow
anyone running the software to see the location of the signal. So while
I doubt we will be connected, another ham at home might be able to do this.

Part of the philosophy of *everyone* can help*. A shut-in Ham, or one
that can't be with the group for some reason or another can help out.
It's part of the redundancy thing. And under some failure modes, the
APRS signal might just save the payload.

Hey Bert!

The character, actually...I am afraid I don't remember the "family's" name, but there were a couple episodes where his "station" was part of the scene. I don't remember a "callsign" ever being mentioned.

73

Perhaps a review of RF Exposure Guidelines at your station is in order, Steve. When that's complete, along with any medical attention indicated as a result, then perhaps a review of the FCC sequential callsign assignments (as they pertain to license class) is also in order.

When you do that research, you'll find that "2 x 2 Extra Class calls" don't exist in the KH/KL/KP blocks. A 2 x 2 style call in those groups indicates a Technician or a General. Do the math.

Nonetheless, if I were a DU or JA or OH or DL going to score a cool trophy callsign, "KH0XX" is a hell of a lot trendier than "KF4XXX". And speaking of OH, you or I can't obtain a KH3x call sign (Johnson Island), but a Vice President of NOKIA (Finland), OH2BH, holds the rare call AH3D.

Legal. Must be! Does "legal" mean "right"?

Sunuvagun!

DIT didn't bless us with any of those. I guess we were expected to
pick it up on the fly during our industry periods. Which would be
typical. Like one of their standing policies; "Topics in the syllabus
not covered in class or by the homework will be covered in the final."

I meant from the standpoint of organizing a project. Being nit-picky
about it "delivery dates" can matter in some hobby projects like when
one is faced with finishing up the job jar to get set for a specific
contest. I agree, in most cases nothing bad comes of slipped dates in
non-commercial efforts like it does out in the commercial world.

> Maybe *you* don't.

Not when it comes to identifying and organizing the sequence of
project milestones, laying out a budget, identifying the unknowns to
the extent possible and listing the assets required and such I don't.
It all goes down on paper or in an MS Project file from square one

just like I do on the job. Which is the way I'd run Mike's balloon
project. And which I sense is not the way Mike is approaching it.

You can be as insulting as you care to, Hans.

The FACTS are that you made a stupid assertion that was easily refuted by a
bit of time spent researching the database.

Extra class or othrwise, your "greeater than half" assertion is/was wrong.

Stupid Hans.

>When you do that research, you'll find that "2 x 2 Extra Class calls"
>don't exist in the KH/KL/KP blocks. A 2 x 2 style call in those groups
>indicates a Technician or a General. Do the math.

YOU asserted than "more than half" of the "desireable" 2 x 1 KH0/KH2 calls
were in the hands of persons who "have no intention" of landing on US soil/

I proved you wrong. It wasn't that hard. That I goofed on the 2 x 2
"extra callsigns" doesn't change mitigate the other numbers in the least.

>Nonetheless, if I were a DU or JA or OH or DL going to score a cool
>trophy callsign, "KH0XX" is a hell of a lot trendier than "KF4XXX".
>And speaking of OH, you or I can't obtain a KH3x call sign (Johnson

Where did I say "right", Hansel? I said that's the way it is.

And It really is THAT simple.

>Sunuvagun!

Stop being an idiot, Hans. You are humiliating yourself in the face of facts easily refuted by a bit of research. I did the foot work. I gave you the numbers. You came up a loser.

Sucks to be you.

Sunnuvagun.

You stated that there were no 2 x 2 "Extra" (meaning AH prefixed) calls in KH0/KH2, and that those calls were for Technicians and Generals.

There ARE AH0 and AH2 prefixed calls, but they fall to Amateur Advanced AND Amateur Extra licensees.

FCC site refers:

http://wireless.fcc.gov/services/amateur/callsigns/sequentialsystem.html

Nothing like ALL the facts, eh, Hans?

Steve, K4YZ

<groan!> They're all over.

I was working in France in 1982 and my boss popped over. We were at
the tail end of the line waiting to go up the Eiffel Tower and a tour
bus disgorged a big load middle-aged flyover country Yanks. A
blue-haired female version of significant girth in a hot pink stretch
suit came off the bus and plowed into line right behind us. She
immediately got into loudly complaining about how "None of these
people around here speak English!" and stared at me for a moment then
asked "Do YOU speak English?!" I stared back for a moment or two,
shrugged my shoulders, then "Parle vous Francais madam . . ?" She
erupted: "See, I toldja, here's another one!!"

My boss gave me an elbow shot to the ribs and whispered, "Kelly you're
such a s--t."

> Doesn't seem to happen much anymore - maybe the Internet fixed that!.

I hope.

Steve, you REALLY need to do a RF Exposure Guideline survey of your station, because you keep getting the facts WRONG.

Referring to the chart YOU cite, in Region 13 (NOT Region 1-10) an AH0x or AH2x callsign is in Group A (Extra). An AH0xx or AH2xx callsign is in Group B.

See what happens when you do half vast research? Nothing like ALL the facts, eh, Steve?

Good luck on this one now!

With warmest personal regards,

I'll accept your numbers, Steve, and in fact "greater than half" might
be an inadvertent overstatement. Stupid me.

But that's easy to fix --- I'll amend the assertion to:

"Damned near half of the desireable AH/KH/NH/WH0/KH2
2x1 callsigns have been scarfed up by foreigners through
trophy-callsign acquisition schemes and are therefore
unavailable to US citizens actually residing in those
territories."

With all kind wishes,

de Hans, K0HB

I have read it. A few times. If you live in the U.S. and get a U.S.
license, I doubt there's any complaints. If you live in Germany,
have never been to the U.S., and never intend to go to the U.S.,
I doubt many people would deem it necessary for you to have a
U.S. license.

>Maybe they should get calls like WJ#XXX, or KJ#XXX...
>If the FCC decides that it's proper for foriegners to
>get American ham licenses.....

Or maybe they should just operate as JA1xxx/W7, which they are
entitled to do with NO paperwork required. You're missing the point.

If somebody from outside the U.S. lives in U.S., and wants to get
a U.S. call, very few people would have a problem with that. I
sure don't have a problem with that.

The problem is the use of bogus addresses by people who have
never set foot in the U.S. to get U.S. licenses.

The FCC a long time ago decided it was proper for non U.S. citizens
in the U.S. to get U.S. licenses, they removed the citizenship
requierment years ago. I doubt they ever intended for the JA ham
club in Tokyo to get a P.O. Box in California so they could get a
thousand U.S. licenses as souvenirs.....

And the other problem is with V.E. tests that are administered
outside of the U.S. by foreign nationals. Yes, there should be U.S.
amateur radio tests available in Japan - at the U.S. embassy so
that U.S. citizens and U.S. military personel could take them - but
not at the sushi bar administered by three JA's who have U.S.
souvenir call signs. And there should not be U.S. license exams
at a hamfest in the Philippines so that anybody who wants a U.S.
license can buy one.

Why can't I take a test for a Japanese ham license in Florida ?

Lot's of people who never lived in Guam had KH2 calls. When I used
to do the KH2 QSL bureau, there was a constant flow of licenses that
would show up in the KH2 bureau's P.O. box for people we never
heard of.

1. Take a V.E. test.

2. Use the KH2 QSL bureau's P.O. box number as your address.

3. Get a Guam call.

4. Look on the internet and figure out what your new Guam call is.

5. Send in a change of address, to your real address in New Jersey,
or your cousins address in California (since you live in Italy)
so you can get a copy of your license.

A friend of mine in Saipan went to get his mail one day and found
seven FCC licenses for seven people from Japan he didn't know....

The system is too easy to beat.

Used to be if I lived in Maryland, and I moved to Florida, I had to
give up my 3 call for a new 4 call that the FCC computer spit out for
me.

Used to be that if you lived in the 4th call district, you couldn't
get a vanity call with any number but 4 in it, but now you can.

We don't do that anymore. Paperwork reduction act, Walter.
No more W4 extra calls left. The guys in California got them all :-)

FCC is too busy issuing licenses to JA's :-)

Personally, I think the FCC should charge $100 a year for a license,
which would give them an extra $70 million a year to administer the
system properly.

>This is a little way off Phil Kane's speciality of communications law,

Not really. I am also a Registered Professional Engineer (by exam,
not waiver) and I have to keep up with such things.

>although no doubt the FCC can't discriminate against aliens. Maybe Phil
>knows of some case law regarding aliens and the FCC?

We all know that an alien can unilaterally cause a change in FCC
rules without a public hearing - JY1 and the Medical Code Waiver.

Seriously, about 20 years ago The Congress amended Section 318 of
the Comm Act - the section that required US citizenship to be
allowed to hold an operator license. This was part of the Ronald
Reagan privitization move to enable non-citizens to seek employment
as radio broadcast DJs which at that time required a Radiotelephone
Third Class Permit (or better). The citizenship requirement for an
amateur operator license was swept away at the same time.

>I am not a lawyer, just an alien.

I hope not as bad as some of the space-aliens who post here...

I always attributed it to post-Marine can't-make-it-in-the-real-world
traumatic stress syndrome. ;^)

I guess it could be RF induced, though.

Good idea - it seems to have degraded now into a mutual admiration and
backslapping society of our two intrepid near-space explorers....one
heavily involved, and one armchair QB-type....

Perhaps, when they're done with the fantasy phase of the project,
we'll see some rubber hit the sky? Stay tuned....

OK, fine. Hans made a mistake.

The bigger question is: Should we put up with the system as described?

Seems to me that all that would be required to fix it would be to require that FCC would only issue or renew licenses for those persons who were either US citizens or resident aliens. And all VEs must meet the same criteria.

That way, N3KIP can have his license and US military personnel can take their exams in Tokyo, but the giveaway stops.

It's not just about callsigns - it's about the integrity of the system.

The 4 land Extra calls other than the 2x2 beginning with A disappeared 10
years ago. That's before the vanity system even went into effect. So you
can't blame California! (Yes I saw the :-))

Again with the allegations of lack of integrity.

I am asking this sincerely...Does ANYone have ANY evidence that these "tests" were NOT administered in accordance with FCC rules and regulations? And "giveaways"...Did the applicant's NOT pay the appropriate VE fee at the time of the exam and did they NOT pay the appropriate fee if their "trophy" call is other than from the sequential system...?!?!

If you're going to insist that the FCC NOT allow this to happen, other changes will have to fall in to place too. The interpretations that allowed THIS to happen are the same interpretations that force the FCC's hand to have "open pools" of test questions.

I'm all for doing both...requiring some sort of residence requirement for licensure and closing the test pooools, but who's going to foot the bill for the legal challenges that will be required to get it done...?!?!

Hell, using that convoluted spin-doctoring, then EVERY call sign is an Extra-Class callsign! Sorry, Steve, you can't wriggle out of it with tortured logic like that!. >>You're<< just flat WRONG on this one.

AH0XX (as an example) is NOT a Group A call sign normally assigned to Extras. It is a Group B call sign normally assigned to Advanced licensees. Only when all the 2x1 Group A calls are glommed up will an Extra be forced to accept a lower Group B, C, or D callsign.

Good luck on this one now!

With all kind wishes,

de Hans, K0HB

No, Jim, I didn't make a mistake. I just overstated my case by 2%. I
said "over half" (51%) when I should have said "damned near half" (49%).

<grin>

Steve, on the other hand is completely mistaken when he claims "AH0XX"
is a call which would sequentially be assigned to an Extra licensee.

I once saw a plaque with a picture of Alf and the caption "Never underestimate the power of an alien". It was designed to go on a desk. I always kicked myself for not buying it. I didn't know about the link between Alf and ham radio. The show was on when I first moved to this country.

>Good luck on this one now!

No luck needed. You were wrong about no 2 x 2 A calls.

You were wrong about those calls being issued to Techs and Generals.

You were wrong about the number of calls issued to non-US residnets.

Sorry Hans, you bit off more than you could chew and now have to choke on
it. Sucks to be you.

Steve, K4YZ

I did not say it was a call that would be sequentially assigned to an
Extra, Hans.

I said it was a call that an Extra could request. ("Glean" was the exact
word I used)

I'm not sure what implications that has. I think I'd better try and find
that case and read it.

I've never actually researched any case law on ham radio. I already had
other reasons to have looked up Yick Wo, etc.

I think there has been a move generally away from requiring citizenship for ham radio licences. Very few countries do anymore.

BTW, did you now that citizenship restrictions for lawyers were swept away by In Re Griffiths, which in turn relied on Yick Wo (Rehnquist dissented in Griffiths, on an officer of the court line of argument). My interest is that as a patent agent and an alien I can be disbarred for simply ceasing to reside in the US. This is not the case with any state bar. The difficulty in applying this line of authority (Griffiths and Yick Wo) is that the equal protection clause of the 14th is directed to the states, and the patent agent licence is federal.

This is definitely getting a bit OT!

Quite true, but if you live in Germany and nip down to your local USAF facility for a VE sesion you can get a US licence, all legal and above board.

There's an obvious solution. If someone takes a VE test overseas and has no US address, they ought to be given a sequentially issued call in one of the less populous FCC districts, say the 1st district.

Of course. So has putting up an antenna, or putting together a system in the shack. Building things, talking, beeping or typing to people all over the Earth.

But once we get past the basics - if we dare call them that - there is room for innovation.

After all SpaceShipOne didn't go anywhere people have not been before. But Rutan and his people certainly made some innovations along the way.

A lot of the job of getting that half-bath is permits, inspections, estimates,
coordinations, etc., too.

Yup. Particularly with volunteer labor: they can just tell you where to shove the helium hose, and then they walk away. Few of us can do that in our work life.

>>>Wherein come the clashes with the

The "CP folks" referred to were a classic case of nonplanners. There's a casual approach and then there's carelessness. A few good folks did 90+% of the work and the rest watched.

What legal challenges? Do you really think that a nonresident alien could successfully challenge the FCC on this point? Or would even bother?

Some time back, Steve, you gave up K4YZ, then got it back. How would you feel if you couldn't get it back because someone in Yokohama had grabbed it? Or if you could never have held it in the first place for a similar reason?

All it would take is for the rules to require either citizenship or residence in US territory at the time of licensing and renewal. Two check boxes on the Form 605, if you leave both blank, no license.

There was a time when you had to specify a station location on the old Form 610. A PO box wasn't good enough, it had to be a real address. That could easily be reinstituted as "place of residence".

Of course there would be some cheats, but they could be easily "outed".

> You don't know Mike...

The world of gathering a number of people that go out to do something
for the sheer love of it is not anything even close to the world of
having a number of people working at a place that get assigned to a
particular job because if they wanna get paid, they do what the boss
tells 'em. In addition they may be starting on a job that a proposal has
existed for some time. To have a meeting and plot out all the milestones
is great, and to have a firm grip on costs is wonderful.

I've pointed out that we are in the organizing stage right now.

Does it make good sense to define the exact projects and the launch
dates and make specific cost estimates when you are looking for the
people to do the job? This is NOT that world.

As I pick up the core group of people, I will then be finding out where
the project is going to go. I've picked up a programmer, some elementary
students and their teacher, A NOAA guy, a few others of general Ham

experience, and most recently, one of my collaborators from the Star party I put together a few years ago. As soon as he came on board, the whole early complexion of the project changed. The guy is a technical whiz in several areas, and when he commits, things happen. He has some specific projects in mind for this endeavor, and we're going to run with several of them.

Had I been doing this Microsoft Project project and had firm dates and costs as of yesterday morning, I would have wasted alomst 100 percent of the time spent on it by yesterday afternoon. Only parts that would not have been wasted time would have been the raw material costs. Big deal, a couple hours and a couple phone calls.

The way that I have to run this sort of project is to first make the pitch to people, then find out how many people are interested enough to volunteer their time. At that point we separate into committees. I'm pretty much at that point now, although I'm looking for a few more volunteers to make committee placement easier. First we get some general ideas of costs, time committments, possible launch dates, etc.

After that, we go off and do our initial research. Then we come back and flesh out the plans. At the second meeting we start to map out the plan of attack. We find out about anything that was unanticipated during the organization meeting. Schedules are made, and construction begins soon afterwards.

I've done it that way before, and it has worked very well.

There are many people that are not suited at all for this sort of thing. If you are the sort of person that needs a perfectly clear path, this is not the project for you. If you need everythnig spelled out for you, this is not the project for you. When you are in a multidisciplinary atmosphere where you have to have technical and non-technical people mixing, and you are convinced that the only people on the project that are worth anything are the technical people, this is most *certainly* not the project for you.

As an example: (of those that replied in the thread)

Lenover21 is definitely not suitable for this sort of project, unless he has a distinctly different off-keyboard persona.

I think Brian Burke would do okay on the project.

Brian Kelly would not. He prefers more structure than this type of project can provide, and I would have problems with him in that I think he has some issues with those he considers non-technical types. Not a good mix there.

Leo? Hard to say...

Now you would probably do well on this sort of thing. I noticed that you did some research, and came up with good suggestions. You've also demonstrated interest in multiple areas, which is a big plus. When a

person understands what the other discipline id talking about, it is a
very good thing.

I suppose Leo would call it more mutual admiration, but that's how I
see it (does Leo hate it when people aren't arguing?)

FCC VEC exam?

No biggie. K3FK, WE3A and I used to administer them in Helsinki. A number of the Finns passed all exam up through the Extra in one sitting.

WA8JOC handled QSLing for all of my DX operations. His mailman, Freddie was used to the piles of QSL cards following a CQ WW DX 'test operation but when the FCC documents began arriving with all sorts of lengthy Finnish names, he asked Shep if he had rented the garage to a bunch of guys from Finland. They, after all, had to provide a U.S. address through which they could be contacted by the FCC.

Jacking the mike gain, misadjusting a speech processor or overdriving a linear amplifier can cause splatter. A defective relay or switching diode on a highpass/lowpass filter board can permit illegal levels of harmonics. Those things are faily common failures in modern rigs.

Howard v City of Burlingame, 937 F2nd 1376, (9th Cir., 1991)

"Uncle Vern" Howard got into a dispute with the city about getting
a permit for his tower as against neighbor complaints. (In the
meanwhile he put up a 65 foot tower where the original dispute was
over a 51 foot tower).

The District Court held that under the "reasonable accommodation"
factor in PRB-1 the permit had to be granted but it denied Vern's
claim for damages under 42 U.S.C. s. 1963 which awardss damages
where a local government (but not Federal) violates an individual's
civil rights "under color of law" and for attorney fees under 42 U.S.C.
s. 1988.

The parties cross-appealed to the 9th Circuit , the city appealing
the PRB-1 preemption and Vern appealing to reinstate his claim
for a declaration of protected rights and therefore eligibility for
1963 damages and 1988 fee award.

The 9th Circuit upheld the lower court but also ruled that holding
an amateur license did not confer any protected right (such as First
Amendment rights) to the licensee, and specifically the right to put
up any antenna of choice - the jurisdiction must still consider those
factors specified in PRB-1 to reach a "reasonable accommodation":

"In fact, the most significant section of the [Communications
Act] forecloses rather than supports Howard's claim: "no such
license shall be construed to create any right, beyond the terms,
conditions, and periods of the license." 47 U.S.C. Sec. 301. Such
language is evidence that no enforceable right exists under Sec.
1983, and that Congress intended to foreclose claims such as
Howard's. See Golden State, 110 S. Ct. at 449; Wilder, 110 S. Ct.
at 2523. Cf. Wright, 479 U.S. at 430. The Act thus grants no Sec.
1983 right to licensees to erect antennas."

Vern was getting up in years and didn't want to carry this to the
SCOTUS - it was a shot in the dark, as he said - so there it stands.

>>
>> Again with the allegations of lack of integrity.

>Do you think it's a good idea that nonresident aliens can hold US licenses? I
>don't.

No, Jim, I don't care for it at all.

However, as I pointed out earlier, there have been a great many items in
the various journals over the decades of US Amateurs doing almost the same
thing. If we (the United States) suddenly clamp down on who can have a US
license, then what happens when a US resident applies for a foreign one?
ESPECIALLY when the applicant actually took the test to get licensed...Not just
ploped down a chunk of change to do it...

>> I am asking this sincerely...Does ANYone have ANY evidence that these
>>"tests" were NOT administered in accordance with FCC rules and regulations?
>>And "giveaways"...Did the applicant's NOT pay the appropriate VE fee at the
>>time of the exam and did they NOT pay the appropriate fee if their "trophy"
>>call is other than from the sequential system...?!?!
>
>That's not what I'm talking about.

It's what >>I<< am talking about, Jim.

Starting with Hans' original post, there have been numerous suggestions of impropriety in obtaining these licenses, but from all other appearances, the individuals otherwise fulfilled the requirements of Part 97 for US licensure legally and honestly. In Hans' example, the test was publically announced, and lacking other evidence to the contrary, I assume held in accordance with Part 97 requirements.

There having been no laws broken. Other than a bit of xenophobia, what's the problem?

>> If you're going to insist that the FCC NOT allow this to happen, other
>>changes will have to fall in to place too. The interpretations that allowed
>>THIS to happen are the same interpretations that force the FCC's hand to
>have

>
>Is the FCC forced to issue licenses to nonresident aliens?

Seems to me they are. If Joe Englishman or Juan Filipino takes the US exam in accordance with US rules and regulations and comples with US laws, how can they refuse?

>>I'm all for doing both...requiring some sort of residence requirement
>>for
>>licensure and closing the test poools, but who's going to foot the bill for
>>the
>>legal challenges that will be required to get it done...?!?!
>
>What legal challenges? Do you really think that a nonresident alien could
>successfully challenge the FCC on this point? Or would even bother?

I doubt that many would, however it seems that many others have the means and the funds to travel to US possessions on frequent occassion...they could also afford to hire an attorney to defend their loss of licensure due to xenophobia.

>Some time back, Steve, you gave up K4YZ, then got it back. How would you feel
>if you couldn't get it back because someone in Yokohama had grabbed it? Or if
>you could never have held it in the first place for a similar reason?

If I couldn't have held it because someone else already held it, I wouldn't have applied for it in the first place. And no one in Yokohama could have grabbed it since it was within the 2 year window that FCC rules DO stipulate as being unavailable after it is vacated by the previous user...ie: K4CAP can only be reassigned to me until May 13th of 2005.

>All it would take is for the rules to require either citizenship or residence
>in US territory at the time of licensing and renewal. Two check boxes on the
>Form 605, if you leave both blank, no license.

OK...Joe Nippon is "residing" at a motel in Honolulu when he takes his test.

He was lawfully admitted.

Condition met.

>There was a time when you had to specify a station location on the old Form
>610. A PO box wasn't good enough, it had to be a real address. That could
>easily be reinstituted as "place of residence".
>
>Of course there would be some cheats, but they could be easily "outed".

And in order to justify that the regulations backing up that "box" on the form must be in place. I don't see anything in Part 97 that says you must be standing on US soil when you apply for or hold a license. The only absolute is that you provide an address where you can be reliably reached at. Alun correctly noted that the only prohibition against licensure is being the representitive of a foreign government.

> license can buy one.

Do you have proof that this occured?

If you do, why have you not provided this information to the
appropriate authorities?

> Why can't I take a test for a Japanese ham license in Florida ?

A lack of ability to speak/read Kanjii? Or perhaps Japanese law
doesn't allow it.

It still comes down to "it's allowed by OUR law"...at least at
present...

Indeed.

There's even the issue of not knowing what you don't kknow you need to know.

For example, when is the best time of year to launch? Midsummer looks good from
a thermal standpoint but as you noted the humidity may override that. Early
spring, while the trees are still bare, may be better - or maybe not.
>

Actually, Leo would prefer that you and Jim end the mutual admiration
and compliment exchange phase of the project, and go do it!

I certainly don't prefer arguing - civil discourse would be nice
indeed - but....you may well note that your always-supportive pal Jim
has been using the last few rounds of these exchanges to promote his
own agenda (ie demonstrate how incorrect his nemesis Len is) - your
project, or most any topic on this group, always takes a back seat to
this goal. In fact, you seem to be following the example of your
mentor here a bit, joining him in the return fire. Are you trying to
keep the arguement alive, or are you really interested in ballooning?
And, what would you like from us? - encouragement, ideas, assistance -
or just phony and gratuitous praise and accolades? You posted this
here for a reason - please advise.

Perhaps you're thread is being hijacked......? :)

LOL! The old 'Oh, that's a very interesting project, and I'd love to
help, but I can't....." routine. Hams drive all night to get to
places like Dayton to fish through piles of junk that they don't need
(been there, done that, impressed the wife to no end when I returned
with a trunk full of stuff!). If you were as interested as you say,
you'd find a way!

More BS, I suspect.....not on your agenda.

There's a big difference between someone actually visiting US territory and getting a US license to operate here, and someone who never visits or operates here getting a license and desirable call, then holding it for years and decades.

Visitors can be accomodated with temporary licenses that require no testing, same as is done in many countries. Look at the whole CEPT idea.

My first pitch was November 9th, so it has been only a couple weeks. At
this time, I have an operable core. I want more people though, to lessen
the load on individuals.

All the seasons present some problems. I was surprised at a number of
mid-winter launches.

I've been thinking about a rapid response sort of launch during solar
storms, auroral activities, etc.

>> The way that I have to run this sort of project is to first make the

Thanks alot for everyone's responses. I just had the handsets delivered yesterday. Am I missing something here? Why would someone complain about me using a hand held radio on occassion for brief periods of time? Its not like I'm broadcasting a pirate radio station or purposly messing with other communications. Are there accounts of the FCC going after private users for consumer products? My intension is to use the radios while out camping or playing paintball, maybe if I get lost in the mall so my girlfriend can guide me through it.

I was on the FCC website already (was going to swallow the $80) and realized all I had to do was send a check for the license. There's not testing or training involved. Again, it doesn't make sense for paying for an $80 license for a $20 product. Will having the license teach me anything new about how to use the product? It seems more like an added tax on a purchased product than ensuring users know how to properly use the product.

Again, thank you for everyone's responses.

It would be better to return the GMRS radios and get FRS radios instead. No license is required for the latter.

It doesn't make sense to risk a $10,000 fine. The FCC usually issues the max fine allowed not the min. And yes they do go after people for violating the regs even for consumer goods.

For GMRS, the license is merely a money raising scheme for the government. It has nothing to do with technical expertise. But then since one is not allowed to modify the radios in anyway or connect them to other products, no technical expertise is required.

In a nutshell -- using a radio to transmit on a band that requires a
license -- is against the law.

You can rationalize and complain all day long -- but the above fact is the
bottom line.

Lots of laws "make no sense" but laws are laws -- break them and suffer
possible consequences.

Will you get caught -- maybe -- maybe not -- why take the chance ?

Keep in mind that those that paid for a license will take a dim view of
those who don't -- may even turn you in.

That is a given on the Ham bands, we are very protective of the privileges.
I suspect the GMRS folks are also.

Perhaps investigate alternatives

1. CB Radio -- no license
2. FRS Radio -- no license

My wife and kids and I use FRS radios all the time -- Shopping Malls,
Disneyland, camping etc. And FRS radios are very inexpensive.

Yes they have a limited range -- so if you want broader coverage -- get a
Ham license.

I can talk thru a repeater to ranges over 50 miles on VHF/UHF with hundreds
of frequencies and also world wide on HF

Ham tickets are easy --See URL:
http://www.arrl.org/hamradio.html

> it.

If you are using a GMRS radio without a license, you are intentionally interfering with other communications -- the legally licensed users of the band. Remember GMRS frequencies are shared, so the licensed users have a right to complain, and the FCC can go after you. If you want license free, use FRS, MURS or cell phones.

Yes -- a $80 license for a $20 radio does seem a bit steep, but if you realize that in the fairly recent past, these radios were not in the $20-$30 range, but more like $200+ each and more likely to be used my small businesses than individuals, the fee sort of makes sense. As it stands now, it is more of a money maker for the FCC, rather than a tax.

1. Then we could get back to discussing Morse code testing, and
eliminate the distractions keeping us from paying attention to Steve and
Brian's war of words.

2. If people would allow the project to be discussed in terms of
policy, it would be germane to the list. Instead, there is a lot of
simply incorrect "facts" regarding myself being incapable of doing this
thing, and that such a thing is even possible.

While others eventually adjust their positions to grudgingly admit that
such things are possible, that doesn't change their earlier posts.

3. I hope you don't mind, but if Jim and I continue to discuss the
post, we will do just that. If you do mind, then you are free to not
participate. If you want to participate, then please do.

> I certainly don't prefer arguing - civil discourse would be nice

Len is a big boy, and seems to return the favors.

In fact, you seem to be following the example of your
> mentor here a bit, joining him in the return fire.

Hehe, and Len's always been so *nice* to me!

Here's how I look at it. In my group of social and work friends, we take little digs at each other from time to time. Little jokes that are harmless and usually funny. My friends take shots at my occasional legendary messiness in my office, and I take shots at one guys neatness neatness, and another's occasional grumpiness. Big deal. We're friends, and enjoy each other's company.

My making a leg pulling reference about naming the first payload package "LEN" is about as innocent and cute a dig as a person could make. If that is "return fire", and a bad thing, than why do you chide me when I take exception to someone calling me incompetent?

It goes both ways.

Are you trying to
> keep the arguement alive, or are you really interested in ballooning?
> And, what would you like from us? - encouragement, ideas, assistance -
> or just phony and gratuitous praise and accolades? You posted this
> here for a reason - please advise.

I already explained why I started posting on this subject, from the first post, and at least once during the ensuing thread. I'll do it again:

Hans started the thread by noting that Hams are being marginalized by their own activities, or lack of them, substituting political action for innovation.

Then in his post that elicited my response:

Hans wrote in part:

> Then a couple of weeks later FCC Special Counsel for Amateur
> Radio Enforcement Riley Hollingsworth, K4ZDH, made some
> chillingly similar comments in a public speech.
>
> "Take nothing for granted. Bill Gates can't, and you can't either."

> think we've been found, in Riley's words, "obsolete", and financing a
> rearguard legal and political maneuvering by Haynie and Imlay is pretty
> much pissing money down a rathole.

end Hans quote
After another post by Jim, I noted that:

Quote by me:

> Funny you should ask!
>
> I have started to put together a "Near Space Science" group. I made

End my quote....

This project is in my opinion is intimately connected to amateur radio
policy. It is a highly visible project that would be likely to have
public support and generate positive p.r. for Amateur radio.

I was hoping that we might discuss this project as it applies to
Amateur Radio policy. Instead we got into how it was not possible for me
to even do such a project.

You will probably be able to watch the thing via APRS (possibly) or
even hit a repeater that we might send aloft. Toronto is surprisingly
close to Central PA as the crow flies. But if you want to "see" rubber
hitting the sky, you have to be here! 8^)

Update on Near Space Science project.

Today, I got my Packet person!

Two latex balloons have also been donated to the cause.

We now have a fair portion of the core personnel put together.

A launch experienced person.

A payload generalist.

Integration and visualization.

Packet communications.

Programming.

First meeting will probably be this weekend to set priority, protocol, and financial, and to set a target date for first launch. Payload form factor and size to be set.

likely scenario - to be settled at meeting.

A tethered shakedown flight will be scheduled for late winter 2005.

First free flight is anticipated in early spring 2005.

First flights will be simple. GPS and digital imaging, along with Packet of course.

Terminal altitude of first free flight will need to be assessed. That will have an impact on payload design. It may be easier to simply let the thing rise until burst instead of going for a lower altitude, which may necessitate design of a burst mechanism.

Further approaches to Educational facilities will likely take place after the first free flight, so that there is a proof of performance re launching/retrieving these things.

There is a couple of guys at a Raleigh NC flea market
who have been selling all sorts of radio equipment for years,
CB linear amps, GMRS radios, business band radios, pirate
broadcasting stuff, marine radios, etc. They have a sign up
that says "no license required." No matter what type of radio
gear they sell, they always tell people no license is required.
Looks like they are living proof that "no license is required."

Excellent. High philosophic potential...almost as if Voltaire wrote it.

Except Voltaire didn't...Leo's phrase is current.

It's all so complex and there is an impedance to humor shown by
others. They resist humor and show negative reactance to it,
oddly demonstrating a lack of capacity to appreciate humor...and
all its inductive reasoning...standing in the waves but enjoying not.

RMS: These serious folks are Rutting around Meanly, the Source
for their displeasure. Their frequency varies, no stability.

Watts new, Leo? :-)

Blame the motion picture business. All the trees and igloos got
moved to Vancouver where a "new Hollywood" is growing. :-)

Or, all the trees were stolen by the western Washington state
folks and planted all over Puget Sound area. Folks in eastern
Washington state were too honest and that's why that part of
the state seems like open prarie... :-)

Or, blame the "space aliens" who got out of Area 51 and went up
to Vancouver to work in the Stargate and Atlantis productions. :-)

Hmmm...maybe if Kelly had purchased some Viagra from Canada
he could have made out better with Amanda Tapping? :-)

Heh heh heh. Leo, my thoughts exactly on this "project."

There's a LOT of "need" of hearty congratulations on a job well
done BEFORE a project is even STARTED! :-)

Nonsense. Anyone needing all that demonstrated request for
emotional sustenance prior to beginning indicates - usually -
that they really aren't in this for the long (and expensive) haul.

>I certainly don't prefer arguing - civil discourse would be nice
>indeed - but....you may well note that your always-supportive pal Jim
>has been using the last few rounds of these exchanges to promote his

>this goal. In fact, you seem to be following the example of your
>mentor here a bit, joining him in the return fire. Are you trying to
>keep the arguement alive, or are you really interested in ballooning?

As I've written in here, free ballooning has been going on in
North America for over two centuries. It isn't "rocket science"

since lots and lots of folks have already done it...most without
any need for amateur radio whatevers.

The "arguments" against me MUST LIVE since the "long livers"
are nearly all PCTAs and I'm against the morse code test for any
radio license by any nations' administration. That tenuous thread,
plus the rabid intensity of the PCTA to maintain the code test that
They had to take is the life-force spark to damn any comments by
me totally divorced from any ballooning discussion. :-)

Some required managerial basics on free ballooning: Know the
environment (the atmosphere) from long-published data on air
pressure, density, and temperature to high altitudes, at least in
general (finer data can be obtained when solidifying requirements);
have some ball-park ideas of costs of balloons, their required
sizes (derived from atmospheric data) versus expected payloads
and support structures plus co$t; get some ball-park figures on
lifting gas cost, suppliers, filling apparatus, and transport to the
balloon launch area; check into all appropriate government
agencies for permissions, possible insurance requirements for a
group (especially if flammable lifting gas is used), interference
concerns on radio, both incoming and outgoing, that might affect
operations of balloon telemetry and "science" payload needs. The
latter includes some reasonably-accurate way to skin-track the
balloon flight by government organizations in some areas for
reasons of safety-of-flight for other air craft...as well as a way to
truly prove an altitude figure achieved (for both payload needs and
later bragging rights).

All those needs certainly seem apparent for a group effort in this
very non-amateur environment of our thin atmosphere layer. That
will be found to be true when the co$ts are looked into and found
to be a bit more than gasoline cost of driving to-from a launch site.
One could expect that a single launch, even a test flight could go
beyond $100 (all-total) a flight minimum. There's NO guarantee
that all balloons are recoverable and reuseable, despite all the
little glued-on "return address" tags.

>And, what would you like from us? - encouragement, ideas, assistance -
>or just phony and gratuitous praise and accolades? You posted this
>here for a reason - please advise.

My opinion is that "gratuitous praise and accolades" are THE
thing desired. Especially all the kudos for "a job well done" even
before the first steps are taken! :-)

If "others" have done it, then all those who Want to do it MUST
ALREADY be successful, even without doing so themselves! :-)

Known: Others have already DONE this. Project "managers" NEED
to go to them and get acquainted with what they will need, how-to-do-
it advice taken in, find out what their costs are, and a myriad of

data involved in such ballooning apart from the radio payload details. All that radio "science" is useless without the transport up into those higher altitudes to perform all that "science."

>Perhaps you're thread is being hijacked......? :)

It's all a CONSPIRACY of the NCTA infidels and fedayeen hijacking all the enthusiasm and all-one-needs-is-emotional-outlook to get it done!!! [damn the practical details, not needed in fantasyland]

Anyone against a PCTA dreaming up something is "obviously" in "hatred of all amateur radio" or the equivalent and must be a kid, a lid, or a space cadet!!! :-)

[aside: all astronauts not yet in space must be 'space cadets?']

Like Brian Kelly, "I'm outa this thread!" :-)

>By what?

By the fact that as long as the tests that were conducted overseas were
conducted in accordance with FCC rules, and those applicants, as far as it
pertains to their FCC licenses are complying with those laws, how can they
refuse?

>>If Joe Englishman or Juan Filipino takes the US
>>exam
>>in accordance with US rules and regulations and comples with US laws, how
>can
>>they refuse?
>>
>Simple: The licenses are intended for US residents and visitors only.

Sorry Jim...There's not one single line in Part 97 that supports your
assertion.

US laws generally state one of three conditions: "shall", "shall not"
"may".

Where "shall" is stated, the licensee is obligated to perform that task.

Where "shall not" is stated, the licensee is prohibited from doing that
thing.

Where "may" is stated, the licensee may proceed at his/her own discretion,
but is neither prohibited or obligated to do such a thing.

>> I doubt that many would, however it seems that many others have the

Start at KH0A, Jim and scroll throug QRZ. Many of the QSL cards of the
"foreign" operators reflect some sort of at least occassional operation from US
territory.

>> If I couldn't have held it because someone else already held it, I

>
>That rule could easily be changed, so that if someone voluntarily gives up a
>callsign the 2 year rule doesn't apply.

And if the Tennessee Lottery ticket I bought this afternoon hits, I will
be a multi-millionaire, but until it does, I won't start looking for a BMW.

And "easily", Jm...?!?! C'mon, don't make me laugh! The Code Test
"debate" has been raging for decades now, and even in the face of a changed
treaty status that allows the FCC to accomodate it's own professed desire to be
rid of it, we are no closer now than we were 3 years ago.

The "2 year" rule gives the FCC "breathing room" administratively. They
won't be in any mood to change it without some immense Congressional pressure
to do so.

I don't know. I've never been to one of those VE sessions. I'm not going to
make any claims one way or the other.

However, suppose for a moment that there *were* some rules broken by a VE team
made up of noncitizens who have never been to US territory. How could FCC do
any enforcement actions against them other than revoking their US licenses?

Not true!

25 years ago, there was FCC code testing, sending tests, and only "one minute
solid legible copy" as the passing criteria.

15 years ago, there were no code waivers and *all* US hams were code tested.

5 years ago, there were still 13 and 20 wpm code tests.

Now all we have is 5 wpm.

Until July 2003, the code test debate was always limited by the fact that the
treaty required at least some code testing.

There was and is also the simple fact that, of those who bother to comment to
FCC on the subject, the majority support at least some code testing.

So FCC takes their time.

Suppose 90% of those who comment supported something like the rules changes I
mentioned - do you think FCC would refuse to act on them?
>

Ya *really* wanna stir things up?

Imagine if FCC came up with a new callsign system, like this:

1) No more vanity calls
2) All CONUS callsigns begin with W
3) All non-CONUS callsigns begin with K
4) All nonresident callsigns begin with N
5) All special event callsigns begin with A
6) All callsigns indicate the geographic location of the licensee's address. If
you move across a call district boundary, you get a new callsign, sequentially
issued, no choice.
7) Everybody gets a 2x3 call except Extras, who get the shorter calls,
sequentially issued, until they're used up.

8) If your present call matches the new system, you can keep it. Otherwise you get a sequentially issued new call on the next renewal. No choice of the new call.

Can you imagine the uproar?

Of course it'll never happen, because the admin paperwork alone would be a nightmare. Plus the vanity revenue would go away.

Actually, the motion picture business in Toronto has been booming for
quite a few years now as well - still no igloos, but there seems to be
a shoot going on just about every day downtown (last week, I saw a
fake NYPD police car in front of the Royal York Hotel, and about 12
trailers parked along the street....even saw a US flag flying on the
flagpole of the old Toronto City Hall during one shoot - that was a
double-take moment...)

No, I didn't. WA8JOC provided it.

> Typical Extra attitude.

I think so. We performed a service to those desiring to legally obtain
U.S. licenses. If you don't like it, I can live with that.

> Just help
> yourself to whatever you want, pass some around to your friends.

I helped myself to nothing. I helped others to obtain that which they
desired. Neither U.S. nor Finnish laws were broken. Almost all of
those who tested have visited the U.S. at least once and have used the
licenses they obtained. Again, if it bothers you, I can live with that.

Or they should be told to buzz off. Why should any U.S. license be
issued to someone in a foreign country that has no intention of using
it in the U.S. ?

And with the CEPT stuff, there's even more reason not to issue U.S.
licenses in many countries.

>If you do, why have you not provided this information to the >appropriate authorities?

We preached to the choir for a lot of years from Guam. Nobody listened, because nobody cared. There were numerous complaints made to

the ARRL and Washington, D.C. about testing discrepancies, P.O. boxes, mail drops in California, licenses arriving unexpectedly.

When the hams in Saipan reported to the ARRL VE (a number of times) that 3 CB'ers with extra class KH0 calls were making sure that all the other CB'ers got an extra class call too, nothing happened.

If you lived in New Jersey and there were VE tests given at your local ham club once a month, would you fly to Saipan (or Manila) to take a test? Smell the rat yet?

But then again, you can't expect the ARRL VE manager to fly to Saipan because the DXCC desk used up all the airplane ticket money flying to the Tokyo hamfest to check post cards.

>It still comes down to "it's allowed by OUR law"...at least at >present...

Just because the rules are the rules doesn't mean the rules make any sense. There's a fine line between abusing a law and breaking it maybe. People are abusing the hell out of the U.S. licensing system because it's very easy to abuse. It needs to be fixed. But the people who could fix it don't seem to care that it's broken.

I don't think we should start putting JA's in radio prison for grabbing U.S. calls, but I think it's way past time where we should have smartened up and fixed a very poorly implemented licensing system.

VE testing wasn't a great idea. Allowing VE testing anywhere by anybody is way past rediculous.

No...YOU said the "most desireable" calls were being gobbled up! That's
pretty subjective. Personally, I don't care for the 2 x 1 formatted calls. If
it were me, and I were out there, I'd get a 2 x 2 formatted call in either the
AH or KH block.

>> You've NOT answered my question Jim.

>any enforcement actions against them other than revoking their US licenses?

Fair enough. However, after 20+ years of VE testing, I have yet to hear
of one of those overseas tests as being determined to be a "license for sale"
situation rather than an above-board test session.

Yet we HAVE had more than a small number of VE test session right here in
the US that WERE just that (license for sale). I am sure there have been cases
of fines, but in most cases, revocation of of licensure for both "licensee" and
"examiner" was the only penalty enforced.

Big snippage...Not much to argue with...

>> I'm not the one arguing that there's a probelm, Jim. (Note: IRT Jim;s
concerens vis-a-vis foreign nationals holding US licensure) You and Hans can
>>work that one out!

>
>That's what we're trying to do.

OK...then send a copy of the document to me and I'd be glad to sign on as a co-sponsor. But right now there's not much to argue with since what's going on appears to be legal and there's no other legal precedent for the FCC to say "No, We won't accept license applications from non-resident foreign nationals".

>Ya *really* wanna stir things up?
>
>Imagine if FCC came up with a new callsign system, like this:
>

>8) If your present call matches the new system, you can keep it. Otherwise
>you
>get a sequentially issued new call on the next renewal. No choice of the new
>call.
>
>Can you imagine the uproar?

Since when has creating an up-roar been un-American...?!?!

Actually, Here's MY idea.

All new callsigns are assigned a 2x3 callsign, regardless of class, period. All existing calls stay the same unless the licensee requests a change which they pay for.

The FCC continues to offer the different "Group" callsigns, but if the licensee wants a call other than what was issued, they pony up the change...No more "sequential" calls other than the 2x3 they were issued.

If you move across a call district line, you either apply for a call in that district, or you are obligated to sign "portable", "stroke", "mobile", etc that call district. There are both enforcement and "good operating practice" issues therein.

The actual cost of the licensing program would go down since the FCC would no longer be issuing tons of "sequential" callsigns gratis, and fees collected would go up since you couldn't get any other format of call without ponying up the change to do so.

>Of course it'll never happen, because the admin paperwork alone would be a
>nightmare. Plus the vanity revenue would go away.

The paperwork would go down since they'd no longer be getting 605's at
every change of class of license or address change and the fees would go up
since they were no longer issuing (save for the initial call) gratis licenses.
And the FCC would be getting paid to process what extra paperwork they DID
receive.

73 and Happy Turkey Day

Then it sounds to me like you need to address this to the Department of Justice, Jim. This is exactly the scenario Jim, N2EY is proclaiming, but it sounds like >>US<< CBers were responsible for this, if I read you right...NOT the sessions being conducted in the RP as Hans used as a point of conversation.

>Just because the rules are the rules doesn't mean the rules make any

Until Hans brought it up in this forum, Jim, it's the first I heard of anyone fussing about it...Not that I read every line of every journal, but after 20+ years of VE testing, I would have thought it would have made "the news" at least once.

And I agree about things needing to be fixed.

>I don't think we should start putting JA's in radio prison for

As is having callsigns that are peculiar to the Pacific Rim/Alaska held by folks living in CONUS, Jim...KH6's, KL7's, >>KH2's<<...! Defeats the whole purpose of having distinctive calls, doesn't it...???

One more call for one of those kid's on Guam that Hans (or was it Jim...???) is all concerned with?

73 and Happy Turkey Day.

Close, Walt.

Does any other country publish the verbatim questions and answers to their exams?

I don't think our exams, when reviewed specifically, are any harder or easier than any other. It's the fact that you don't have to really know what all those things mean as long as you can rote memorize enough of the questions and answers to get an acceptable score!

My XYL passed the General class written seveal years ago after using the "QRZ" test prep feature...She "passed" the written first time around and still can't tell you the difference between a diode and a dipole ! ! !

How do you pronounce "Ville" from Texas?

And that address sounds familiar.

Callsign: N5TJ Class: Extra Codes: HVIE USA

"All these new club calls...

from [WR3O@music-city.tdec.state.tn.us] [Permanent Link][Original]

Subject: All these new club calls...
From: WR3O@music-city.tdec.state.tn.us
(WR3O@music-city.tdec.state.tn.us)
Date: Mon Sep 11 12:15:59 1995

In the Sprint rumored scores (and other recently published
scores), I have noticed quite a few new club calls. Some of
the club calls appear to belong to individuals who are well
known in contest circles. Here are a couple of examples:

KC5NWX STEINMAN AMATEUR RADIO CLUB LIC ISU
11-APR-1995
CLUB 6719 SHELL FLOWER LN LIC EXP
11-APR-2005
DALLAS TX 75252 LST UPD
11-APR-1995
KR0Y STEINMAN, JEFFREY S IS RESPONSIBLE

KC5OYM ALLIGATOR AMATEUR RADIO CLUB LIC ISU
31-MAY-1995
CLUB P. O. BOX 10465 LIC EXP
31-MAY-2005
MIDLAND TX 79702 LST UPD
31-MAY-1995
N5RZ BOWEN, RALPH E IS RESPONSIBLE

What is the deal with these new calls? Have you guys set up clubs
in your homes, or is this part of the process required to get a
desired vanity call? I am definately NOT looking to start any flames
here, please. I am just trying to understand why several top notch
contesters have applied for club call signs. (And of course,
wondering if I need to do the same to get the call I'm after!)
Thanks for any enlightenment.

73, Kirk WR3O"
***

Note that Steinman no longer holds KR0Y, nor KC5NWX. You have to
wonder if he has enough yet.

> > Callsign: WA8JOC Class: Extra Codes: HAI USA

> > FCC: ULS Listing
> > Lookups: 1075
>
> Yep, that's Shep.

>
> My name is Dave and exams were administered under the Laurel, MD VEC.

***
"The Laurel VEC coordinates the efforts of its Volunteer Examiners
(VEs) in preparing and administering amateur service operator license
examinations. The VEC screens collected information from its VE
teams, resolves all discrepancies, and forwards all required data to
the FCC electronically. All VECs are authorized to coordinate
examination sessions at any location an examination can be conducted.
A VEC, however, may choose to limit its area of operation to a
particular geographical area. The Laurel VEC has certified VEs in
several states as well as overseas.

A Volunteer Examiner (VE) team can administer an operator license
examination to you or file other applications for you, such as an
application for renewing your license, change of address, or change of
name. If you are interested in becoming a VE with the Laurel VEC,
contact your nearest VE Team Leader."
***

And it appears that you were the single point of failure. Although
it's charter states that "The Laurel VEC has certified VEs in several
states as well as overseas," there appear no exams scheduled in
Helsinki for 2004 or 2005; no VE Team Leaders in Helsinki or -any
other- off shore location.

Ah yes. I made a mistake about your mistake, Hans :-)

51% to 49% is about the overstatement of Mr. Kerry vs. Mr. Bush, earlier this
month...

Now throw in the number of US residents that hold Guam or N. Marianas
calls that have never been to Guam or the N. Marianas Islands.

Why would they need such a call?

Easy, have the VE, VE Team, and all those who've tested under them
appear before the FCC for a retest. Maybe if they fly American
Airlines, it would keep them afloat, too.

Why is it that the USA Federal Government refuses to hire
non-citizens, but now it accepts foreign amateurs as surrogates for
licensing purposes which used to be conducted by USA Federal
Government citizen employees?

Something definitely got lost in the translation under the entire VE
concept.

There is usually a time requirement for residency. A VISA may be in
order.

But staying a weekend at the hotel owned by your VE Examiner sounds
like a conflict to me.

> Ya *really* wanna stir things up?

Yo, Ya, I juss mite. Fold foreign national and off-shore
testing/licensing under "Homeland Security."

I wonder if any of the 9/11 terrorists or terrorist insurgents in
Iraq, Afghanistan, Suadi Arabia, Iran, Yemen, Jordan, Pakistan, Egypt,
Morocco, Tunisia, Libya, France, or the UK held an amateur radio
license?

The Republic of Korea didn't allow -mobile- amateur operations while I
was stationed there. Wonder why?

No problemo except scratch #7 - it's just more Extra elitism. If
you're really that much better than the rest of the hams, the same
length callsign won't slow you down at all. Or maybe it would.

>

Not quite correct. If a person tests all the way to Extra starting with no license at one sitting, their new license will be a sequentially assigned 2x2 beginning with A. Your statement is correct, however for anyone who starts out their first license as either a Tech or General since there are no more sequentially available 1x3s.

>that call district. There are both enforcement and "good operating practice"
>issues therein.

So I'd have to start signing "N2EY/3" after more than 20 years of not having to
do so from here? That's effectively lengthening the call to a 2x3

Would I have to pay the fee to get a 3 land call?

What if all the 3-land 1x2s are gone?
>
>The actual cost of the licensing program would go down since the FCC

You came in in the middle of something Dee.

This was my suggestion as to what SHOUL:D be...Not "What is".

My suggestion was that they should "can" the "sequential call system" and
just issue a 2x3 callsign to all new licensees regardless of class earned.
Then if the licensee wants something other than what they got, they can select
from the appropriate Callsign Group and pay for it. It would cut down on
"gratis" license functions and increase revenues at FCC.

Been there, done that, and have the litany of call signs to prove it. In fact, used to be that you needed to NOTIFY the FCC if you were going to operate away from your assigned station location, and periodically renew that notification. Some of just got an additional station callsign if we were going to spend time at another location. Once had a station license with my now-mother-in-laws address because I spent so much time there courting her daughter. Saved having to sign "KG6AQI/W0" and sending those pesky notices to Washington.

FCC finally figured out it was unnecessary regulation for their purposes, and discontinued the requirement.

> There are both enforcement and "good operating practice"
> issues therein.
>

No there aren't.

Each licensee is required to have a current mailing address on file at FCC. One reason, I presume, is in case they need to "enforce".

"Good operating practice"? --- that's just a control-freak way of saying "I want to know exactly where you are, regardless of what the FCC wants".

>sale"
>>situation rather than an above-board test session.
>
>KH2D, who has *been there* says differently. See his posts on the subject.

I read it.

He refered to "CBers" with Amateur licenses. He did not specify that ther
were licenses obtained from VE exams held at foreign hamfests. Sounded to me
like "locals"...

And >>I<< said that if he didn't get the desired results, he should push
it with DoJ.

>>Yet we HAVE had more than a small number of VE test session right here
>>in
>>the US that WERE just that (license for sale). I am sure there have been

That's not the point.

You brought up how to enforce regulations on foreign Amateurs who may
allow some misconduct in the performance of a VE session.

No where did I say ANYthing about using a foreign license in the United
States.

What I >>DID<< say was that in VE session right here at home, conducted by
Americans, the "most" penalties usually enforced are license revocation of both
the licensee and the "examiner".

Are you suggesting any GREATER penalty on a foreigner who commits the same
crime?

Do you dispute this fact?

>> OK...then send a copy of the document to me and I'd be glad to sign on
>as

You're the one talking about changes to the rules.

How's this for example: "Where a change of address is requested and no
other change of callsign would be required due to location within the same call
district, attaching a copy of the letter of notification sent to the Commission
to the original station records shall be considered adequate. A change of

address on the original license document will be reflected upon the next routine renewal or paid license transaction."

>>and the fees would go up
>>since they were no longer issuing (save for the initial call) gratis
>>licenses.

It's a way of saying it's annoying to answer a W1 calling CQ cuz you need
New England states for WAS only to find out he's in Los Angeles.

And stuff your "control freak" issues, Hans. That's just your way of
trying to demean someone else's ideas by attaching some misdirection without
valid reasoning behind it.

Pretty lame, actually, but nothing new.

That's your opinion.

In the FCC's opinion it is not a regulatory necessity, thus they don't require it.

Just as they no longer require you to certify you've operated CW at least 10 hours in the past year or you can't renew your license, they no longer require you to be an Extra to operate an amateur radio station in space, they no longer require you to keep a strict record (log) of your stations transmissions (including fruitless CQ's), they no longer require you to advance-notify your District Engineer each month you will be operating portable or mobile and include a "specific as possible" itinery of your mobile operation, and they no longer require your station to have a device to measure your transmitting frequency (independent of the transmitter).

These are all archaic regulations, just like "primary station location required", which did not serve any FCC regulatory purpose and they have discarded.

If you feel you need to still keep a log, feel free to do so. If you feel you still need your primary station location inscribed on your license, feel free to inscribe it there (there's a nice spot on the document under "Special Conditions" where you could also record the address of your District Engineer so you can notifiy him each month that you'll be operating 'mobile' away from your "primary station location"). When you renew, be sure to include a copy of your log to fulfill the "hours of CW operation in the past year" requirement .

Or not, as you wish.

>
> It's a way of saying it's annoying to answer a W1 calling CQ cuz you
> need
> New England states for WAS only to find out he's in Los Angeles.

FCC doesn't regulate WAS, so they don't impose WAS requirements on the call sign structure.

Your example is pretty contrived anyhow, because there are several states in "1-land", so unless you need every one of them, a quick check of your callboook would have revealed he's in Sacremento.

Why would the FAA require a street address when the FCC doesn't? Very
few pilots fly to their homes (though there's a suburb of Sacramento
when many houses have a hangar next to a runway), but many hams operate
from home.

I remember that the rule was that if you were going to operate away from home for more than 48 hours, you had to send notification to the FCC district offices where you'd be. So a ham on a long car vacation would send a series of cards for each move after the initial 48 hours. Even a long weekend at the shore or mountains required notification.

>Some of just got an additional station
>callsign if we were going to spend time at another location.

Some hams collected a string of them, for just that reason. PArticularly across district lines.

In know, but they do. In 96 I submitted a change-of-address that included my PO box and RR...I got an UGLY letter that stated I was required to provide SPECIFIC directions to my residence from recognizable landmarks, or my certificate was "subject to suspension pending provision of said information".

I certainly don't mind at all, Mike - thanks for asking. By all
means, if you feel that you have a continuing need for the deep
technical insight and engineering assistance that Jim has been
providing to you so far, then do indeed proceed with my best wishes.

However, if you would like to have some control over whether others
participate, not participate, or object to things said in this public
forum, I'd respectfully suggest that you move the discussion off line.
If it's just going to be the two of you, the telephone might be the
best tool for the job....

Otherwise, correspondum emptor.....let the poster beware! :)

Not all threads, Mike....quite a few become Jim versus Len. Or Jim
versus whomever he believes might be Len, a pseudo-Len, or Len-like in
some way that he doesn't like! :)

Then again, Jim may be in a position to make one valuable contribution to the project - you might be able to talk him out of the leftover cabinet from his gutted BC-221, and use it as a field box to carry the balloon and payload to site! 8*p

>Project" (which one of the guys in Network Engineering has posted
>prominently in his cubicle 8*p).

Actaully, Leo, I think you hit upon the very summation of Lennie the Loser's Amateur Radio career:

>The Six Phases Of A Project

Subtitled: "Lennie's Career in 'Professional' and Amateur Radio"

>1. Enthusiasm

Lennie dove into his "army career" as a radio mechanic. It was simple...The Army taught him how to read the maintenance manual and he followed the instructions. Considering the era in which he got involved, there was still a "whole wide world" out there for him to investigate. No doubt a senior NCO buttered Lennie in preparation for getting his "X" on re-enlistment papers, so I am sure he (Lennie) was sure of his invincibility as a radio mechanic.

>2. Disillusionment

Faced with the "real world" obligations (education, training, OJT, etc), it must have appeared daunting to Lennie to even get past the Maytag repairman. While Lennie was no doubt "smart enough" to do it, Lennie's been a short-cut kinda person all his life. Unfortunately all those short cuts, laid end to end, made the trip a lot longer than he envisoned.

>3. Panic

Realizing that he'd never be able to stack-up next to REAL engineers, Lennie latched himself onto the coattails of men and woman who DID have "The Right Stuff" in engineering, and hoped-to-high-heavens thet no one caught on to his game. Looking for yet another shortcut to vindication Lennie saddles up to an Amateur Radio publisher in hopes of getting his name in print.

>4. Search For The Guilty

There's always been "someone" who was responsible for Lennie's inability to gain the respectability and recognition for his wonderfulness. "WAIT! Those !@#$% ham radio operators! THEY did it! They kept me from the fame and fortune I so richly deserve!" This due, no doubt, to the UNDERwhelming arrival of fan mail from his several published bylines in the aforementioned Amateur Radio journal...a journal that went belly-up while Lennie was an "Associate Editor".

>5. Punishment Of The Innocent

Lennie's on-going berating in RRAP says it all. "We" did it to him, and now, By God, he's gonna make sure we "pay for it". Everyone except Lennie is responsible for Lennie's failures in Amateur Radio. The "Mighty Morsemen", "The ARRL", "the Elitists", the "jackbooted thugs", etc etc etc. Forget that Lennie might actually be well received at the local Amateur Radio club with his "professional background"...taking the same tests that "mere mortal" citizens take might further wound his already overinflated ego.

>6. Praise And Accolades For The Non-Participants

If there ever was a "non-participant" in Amateur Radio, it's The Loser of Lanark. Of course, however, it's "professional engineers' such as himself that knows "all about" the "real radio world", and no one save he and his colleagues knows anything about radio other than Part 97.

Uh huh.

>like "locals"...

Unless I'm mistaken, only an Extra can be a VE that gives Extra exams. So you have a chicken-and-egg scenario about how such a setup could get started.

>And >>I<< said that if he didn't get the desired results, he should push
>it with DoJ.

And they would do what? It's an offense committed outside US territory and US jurisdiction, unless it's at an embassy or similar place.

>same
>crime?
>
> Do you dispute this fact?

Cool down and think about the main point:

Besides the fact that it's just plain wrong, hams who live in US territory have two reasons not to cheat as VEs:

1) If they're caught, they could face fines and even jail time

2) If they're caught, they could lose their FCC licenses, which means no ham radio on US territory, and maybe none at all. Ever.

A nonresident alien with both a foreeign and US license doesn't face the same possible consequences.

>misconduct or abuse of that privilege?

Because they think it's not a good thing for the ARS, or for radio in general. Look at the multiple choice code tests - they were eliminated as part of the 2000 restructuring after many years of use - because hams complained that they weren't doing the job.
>
> If you force THAT issue, then "they" can adequately argue that there are

> And no one looking for a 2-land call would wind up working someone in
>PA!

Is that *really* such a problem? Many of the rarest states are in call districts that contain a lot of states, so even if that rule were reenacted the hunt is only slightly reduced.

How about we make it even easier: Carve up the callsign blocks into state-specific ones so you could tell which exact state someone was in just from the call. For example, in the 3rd call district, all calls with an M, R or Y in the suffix could be restricted to Maryland only, all calls with D, E or L could be restricted to Delaware, and all the rest would go to PA. (Adjust as needed for population variation) So you could just look at a callsign and know which state the ham was in.
>
> "dadididadit dididididadah" takes about 1 second extra at 20WPM. Big

Right. Somebody who's been a ham for 60+ years and held the same call, then moved to SFL 15 years ago would have to give it up or sign portable. Thanks a lot.
>
>>>The actual cost of the licensing program would go down since the FCC

No good. FCC is supposed to know how to contact licensees. That's why they need
some sort of current address.

They can find your transmitter by DF ing, but to send you a letter they need an
address. Or at least a PO box.

>>>and the fees would go up

I'm pointing out that your proposed changes would increase admin work that serves "no regulatory purpose". Making my search for WAS easier isn't FCC's job.

Thanks for the info. I couldn't find the case on FindLaw.com, but I didn't know which circuit to look under. I will try searching it under the 9th.

Getting somewhat back on topic, we were discussing civil rights of foreign hams in the US. I beleive that someone suggested that we be given distinctive calls.

As I understand it, Howard v Burlingame said that a ham licence didn't cause any protected civil right to arise, on the ground that the Communications Act foreclosed that possibility by it's statutory language.

That seems to be correct, but it doesn't seem to rule out the application of due process rights (for example) in obtention of a licence.

BTW, do you think the equal protection clause of the 14th amendment could ever be applied to the feds, or do you think that as it says the states it can only be applied to the states? The due process clause of the 5th amendment seems to be the fallback position that can be used against the federal govt., as it doesn't contain that language.

These two clauses have been held to apply to aliens, as they don't use the word 'citizen', even though other clauses within the 14th amendment do.

Alun

I doubt it, but I would never be surprised at how the SCOTUS would
rule in civil rights cases these days.

The problem with CEPT operation under a foreign call is that non-residence is a required condition. This means, amongst other things, that having a green card completely bars operation in the US under CEPT.

However, anyone who has a licence from a country that has an ordinary bilateral reciprocal agrrement with the US can operate in the US even as a permanent resident for an indefinite period of time.

In both cases, FCC rules impose further conditions:-

1) They must not be a US citizen;

2) They must be a citizen of the country that issued their licence; and

3) They must not have a US licence.

OTOH, the rules for obtaining a regular US licence leave it open to anyone except a representative of a foreign government. This is supposed to be so that listening stations can separate diplomats from other hams by their non-US calls. This exception seems to be allowable because of an overriding government interest.

What would you have the FCC do differently?

It doesn't seem likely that you could get back to the situation where foreign hams in general couldn't get a US call, as this would likely not make it past the due process clause.

If you could acheive that I'd still be OK, as I could use W3/my UK call forever if I didn't have a US call. Others wouldn't be so lucky. If they came from a country with no bilateral agreement (remember CEPT is no help to US residents), or if they were citizens of one country with a licence from another, or even if they just got into the hobby after coming to live in the US, those guys would all be QRT. That's how it used to be in the bad old days.

So maybe you'd like to ban VE tests held outside the US? That would be hard on your military. How do you get licenced if you are posted somewhere that you don't speak the language? Well, one way is to get a licence from your own country by taking a test in your own language, and then get reciprocal privileges. Granted, I can't think of other examples of countries offering testing outside their borders, but not many have a VE system either. I think VK does. I wonder if you can take their tests outside VK?

Another suggestion I saw in this thread was to stop aliens from being VEs. I don't think that would fly constitutionally speaking either. BTW, I'm a VE myself. I don't think it would harm me that much if I couldn't be a VE. You could volunteer to explain that to any Americans that might want to take a test but couldn't because we could only muster 2 VEs that day.

Perhaps it would be possible to tinker with the rules only for VE tests held outside the US, restricting the nationality of either the VEs and/or the candidates. OTOH, it's possible that if you did that you might run afoul of the civil rights laws of the host countries.

So, what do you seriously suggest?

I don't really think anyone cares if someone in Japan can get a call that belongs to the mainland US. All that really seems to be needed is some way to prevent those testing overseas from getting an exotic offshore US call. Arguably, those in the mainland US shouldn't be able to either, but the FCC doesn't regard this as important.

GMRS and FRS rules are something of a mess, IMHO.

You have to understand that the GMRS licence actually allows you to use a higher powered mobile transceiver, but only on two channels that you designate. There are actually repeaters on a lot of these channels, but unlike in the amateur service, they are 'closed' and you have to pay to use them (in ham radio in the US a repeater can either be 'closed' to outside users or can raise money by membership of an association, but never both, whereas in GMRS it is invariably both).

GMRS was later expanded so that the licence included the use of lower power handhelds on 'interstitial' channels, i.e. channels that are half way inbetween each of the repeater channels.

Then FRS was introduced at still a lower level of power on the GMRS interstitial channels.

What has happened since is that stores are selling GMRS handhelds alonside the FRS ones. This is either because they are lacking in scruples, or because they are ignorant. Since a GMRS handheld works on all the FRS channels but at higher power, the temptation to get one instead is rather high.

The licence for GMRS is not just for the handhelds, but also for the mobiles which run more power and can use repeaters, albeit at further cost. AFAIK, the mobiles and the handhelds in GMRS can't even communicate with oneanother as they don't use the same channels, which apears to be totally SNAFU to me.

I am not a GMRS user, and there may be some errors in what I said above, but I think that is substantially how it is. BTW, GMRS was originally part of CB!

Not any more. The GMRS license now permits operation on any GMRS
channel, with restrictions only on specified channels above "Line A"
which is roughly 150 miles south of the Canadian border. Stations
above Line A which were licensed on those channels under the old
"2-channel" rule can continue to operate on them.

The FCC sees no regulatory reason (nor enforcement reason, nor "good
operating practice" reason) to change your callsign when you move from
one district to another, nor are they required to consult "numerous
letters in QST" to determine what is "good operating practice"..

They do, however, often take into account the wishes of the citizens who
petition them for rule changes. One of those petitions asked that they
allow amateurs to retain their calls when moving because many hams had
become 'connected' to their call signs, almost as a 'name', and did not
wish to surrender the call when moving. Finding no regulatory,
enforcement, nor "good operating practice" reason that a ham shouldn't
keep their callsign, they ruled in favor of the petitioner.

> I guess it's no problem when you are running a full gallon and
> have the Internet right there at the operating position, Hans.

Whether I'm running a "full gallon" or 100mW (which is closer to what I
normally run) doesn't make it any easier to devine the source of a CQ.
And what does the internet have to do with it?

FAA is not concerned with my amateur station location unless I move close to an airport and build a tower, so I have no occasion to submit a mailing address change to them.

I'll keep it in mind, however, if I move and my location/tower height require permits from them. Until then, I really couldn't care less about what FAA requires, since they lack jurisdiction in amateur radio location matters.

Aw, gee, Jim, that isn't nearly complicated enough. You gotta get it down to the country level at least, preferably the city or township level. The control freaks would like something like the old convoluted USSR system. If you knew a guys call sign, the system was almost detailed enough to use for targeting ICBMs. See below. Riley Hollingsworth could just dial in your call sign, and a boomer sub off the coast of New Jersey would target a tomahawk with the violation notice attached to the nosecone. I can just see it now ---- "Hey, K4CAP, your stations RF Exposure Evaluation appears to need updating. Please report when you have completed the required survey."

There's nothing "chicken and egg" about it. We were discussing
off shore US Amateur Radio exams. Jim chimed in about "CBer's with
Extra licenses" on Guam, but not a word about them being FOREIGNERS,
which is what >>I<< was addressing.

Neither you, the other Jim nor Hans have provided a single bit of
evidence that the tests administered OFF SHORE (in my definition
meaning not conducted under the US flag, regardless if on US soil, an
embassy or US military installation) has been done so inappropriately.

> > >And >>I<< said that if he didn't get the desired results, he should push

> > jurisdiction, unless it's at an embassy or similar place.

It would, hopefully, get the licenses of the offenders revoked
thereby depriving them of the basic premise for them BEING a VE, Jim.

No US tickee no US testee. OK G.I.?

> > >>Yet we HAVE had more than a small number of VE test session right here

> >
> > That's not the point.
>
> Sure it is.

No, it's not.

The whole thread was initiated by Hans' lamentation over >>US<<
exams being conducted overseas. US licenses being used by
foreigners...Not foreign licenses being used by Americans.

> > You brought up how to enforce regulations on foreign Amateurs who may
> >allow some misconduct in the performance of a VE session.
>
> And the answer is...

Determine wrongdoing (if any) by that Amateur and revoke his/her
license.

No US tickee, no US testee. OK, G.I.?

> Cool down and think about the main point:

I'm perfectly cool, Jim.

I'm wondering how YOU are going from Hans' lamentations over US
tests being conducted overseas to this being a discussion about
Americans being able to use foreign licenses here.

THAT was specifically codified in Part 97 as a no-no. No debate.
Against the rules. Period.

> Besides the fact that it's just plain wrong, hams who live in US territory have

>
> 1) If they're caught, they could face fines and even jail time

Uh huh...And how many VE's caught cheating have so far FACED jail
time,

> 2) If they're caught, they could lose their FCC licenses, which means no ham
> radio on US territory, and maybe none at all. Ever.

American licensees HAVE lost their licenses for cheating. So far
just

> A nonresident alien with both a foreeign and US license doesn't face the same
> possible consequences.

A non-resident alien DOES face the same consequences as US
Amateurs...Revocation of licensure....Just like the others who HAVE
lost their tickets, Jim.

> >>> OK...then send a copy of the document to me and I'd be glad to sign on

> weren't doing the job.

Stop.

Go back and read what I said previously and what YOU just wrote,
Jim.

Your own example examplifies MY point, Jim...there were
COMPLAINTS. The Federal Government did not spontaneously decide to
remove the test format.

Allow me to reiterate uncase your scrollback isn't working:

> >>>But right now there's not much to argue with since what's
> going
> >>>on
> >>>appears to be legal and there's no other legal precedent for the FCC to say
> >>>"No, We won't accept license applications from non-resident foreign

> >>Don't need a precedent.
> >
> > Sure you do.
> >
> > Why would the government revoke ANY privilege unless there was some
> >misconduct or abuse of that privilege?

"Why would the government revoke ANY privilege unless there was
some misconduct or abuse of that privilege".

While you can argue the choice of words "misconduct" or "abuse"
when applied to the multiple choice format, Jim, there as certainly no
move afooot by the FCC to change it until there was a precedent
(complaints) from the field to do so.

> > If you force THAT issue, then "they" can adequately argue that there are
> >even far greater abuses right here at home and the whole program goes out the
> >window!
> >
> So?

Proof of discrimination, Jim.

To act against them where no evidence of misconduct exists is
discrimination.

> > Why? If it's someone "new", they will have never known any other
> >way...and
> >I specifically stated that all those already licensed would not be forced to
> >make any changes.
>
> Because the new folks would be subject to conditions that the existing hams
> didn't face.

Amateurs getting licnesed today do not face the same conditions
you and I faced 20-30 years ago, Jim.

New licensees would not face any revocation of service they
previously enjoyed. Old licensees would keep their old calls.

Big deal.

> >>> The FCC continues to offer the different "Group" callsigns, but if the

> >cuts.
>
> How much service is required to issue a sequential callsign?

Enough that the FCC has, on several occassions, demanded to know
why a particular licensee made several license changes within specific
time frames.

If it was no big deal, why would they fuss?

As a matter of fact...I often wonder why they fuss over frequent
Vanity changes...It's the one thing they ARE getting paid for, and the
fee charged far exceeds the expected outlay of materials and manpower
to accomplish.

If some idiot has more money than common sense and wants to
change his call every three months...let him. He paid for it.

> > And no one looking for a 2-land call would wind up working someone in

Jim...have you worked so many that you forgot this one basic
premise of award hunting? Until it's worked and confirmed, they are
ALL "rare"...! ! !

> How about we make it even easier: Carve up the callsign blocks into
> state-specific ones so you could tell which exact state someone was in just

> some sort of current address.

I didn't say "don't send it in", Jim.

I said attach a copy to your original station documents. You'd
still send it in, and the FCC could update their records. They just
wouldn't necessarily sned out a new document with each and every
modification.

> They can find your transmitter by DF ing, but to send you a letter they need an
> address. Or at least a PO box.

Uh huh. And what I proposed changed...what...???

> job.

No, it's not. But under your system, it no longer matters where
the licensee is. So let's stop issuing a "6" call to Californians and
"0" to Minnesotans, 4 to Tennesseeans, etc...Just start at KC1AAA (or
wherever they are in the current sequential system) and keep on going
until they get to WZ1ZZZ. Then start with KD2AAA and go to WZ2ZZZ,
etc etc etc until we get to WZ0ZZZ, regardless of whether they are in
Bangor Maine or Irvine, California. It doesn't matter, right...???

Sorry so late in my response, Brian...I ate, got fat, fell asleep
VERY soundly!

Couple days more of this a year and I WOULD have trouble fitting
into that flight suit.

>wish to surrender the call when moving. Finding no regulatory,
>enforcement, nor "good operating practice" reason that a ham shouldn't
>keep their callsign, they ruled in favor of the petitioner.

Yep.

There's also another factor: availability of callsigns in the new area.

There was a time, back when the ARS was much smaller, that FCC would try to give "corresponding" calls when someone moved. W1ICP was W0ICP, for example. But that became "impractical".

I got N2EY (sequentially issued) when I moved from EPA to WNY in 1977. By the time I moved back (1979), the FCC was not reissuing "abandoned" 1x2 calls. Something about their computer system.

What it meant in my case was that if I'd asked for a 3-land call, I could have gotten a sequentially-issued 3-land 1x2. But N2EY would not have been reissued to anyone. So there would be one less Extra with a 1x2, and I decided to keep N2EY.

Did I do the wrong thing?

>> I guess it's no problem when you are running a full gallon and
>> have the Internet right there at the operating position, Hans.
>
>Whether I'm running a "full gallon" or 100mW (which is closer to what I
>normally run) doesn't make it any easier to devine the source of a CQ.
>And what does the internet have to do with it?

If you have internet access in the shack, you could look up a callsign heard and see what state the ham is in. Not a new idea, though - there used to be this thing called a "callbook"

Hardly. But without some "documentary" evidence, how does one
relate as "fact" something they have no proof for, other than first
hand experience?

> > > But as of right now, NO laws seem to have been broken.
> >
> > Doesn't mean it's right!

So far, it is. Not because >>I<< said so, but because the FCC
does.

> > > By the fact that as long as the tests that were conducted overseas were

> concept.

And...(hold on to your hats boys and girls...) I agree. My one
and only disagreement here is that, as of right now, it appears legal
and within the scope of Part 97.

So WHAT do we do to fix it?

> > Then, under the new rules I would write, they get visitor licenses.

No I don't. Haven't signed it once on the air since I got K4YZ
back. That's a year and a half.

And N0IMD is still not in my logbook.

I've "opposed" a lot of things. I've supported others. Just like
you, Brian.

> like a conflict to me.

Perhaps it is, but there is no "time requirement" presently
codified in Part 97. And the only "conflict of interest" is a
monetary promise or "relationship" by marriage or other famililar
precedent.

> > > I'm not the one arguing that there's a problem, Jim. You and Hans can

I can't speak for Jim, of course, but I am willing to bet they'd
even let you "collaborate" if you were of a mind to, and do so
civilly. I'd certainly accept your signature on such a proposal to
Uncle Charlie.

> > Ya *really* wanna stir things up?
>
> Yo, Ya, I juss mite. Fold foreign national and off-shore
> testing/licensing under "Homeland Security."

Actually, if you wanted to get the whole thing changed in a big
hurry, a well written letter to Tom Ridge & Associates just might get
the plug pulled a lot faster than any FCC process might.

> I wonder if any of the 9/11 terrorists or terrorist insurgents in
> Iraq, Afghanistan, Suadi Arabia, Iran, Yemen, Jordan, Pakistan, Egypt,
> Morocco, Tunisia, Libya, France, or the UK held an amateur radio
> license?

Good question. But since they didn't see the need to get pilot's
licenses to commit their crimes, why would they get radio licenses
too?

> The Republic of Korea didn't allow -mobile- amateur operations while I
> was stationed there. Wonder why?

> No problemo except scratch #7 - it's just more Extra elitism. If

More socialism, Brian. Everyone exactly the same no matter what
they accomplish or how they contribute...?!?! No reward or privilege?

Of course he will, fake FCCHAM guy. But when he puts his application in during the 90 day period before it expires it will be put in Herby status. Don't know what that is? You will learn.

If you do know what it is, you are stupid because your post indicates you don't know squat from shinola.

Dan,

IMHO, now that a major D.C. communications law firm is involved,
Riley will not move against MAN. Just my opinion, but look back.
Every time Riley has to go up against someone who has retained
big name legal representation, Riley backs down, cuts and
runs. Here in Massachusetts, we had a guy whose ham ticket Riley
was not going to renew. Know why Riley cut and ran and permanently
stopped all action against this pesty ham? One phone call from
Senator John Kerry's office is all it took. Kerry's office told Riley
to leave the guy alone, and Riley dropped the whole thing and ran
away from it. Dan, you know for sure, it is all politics, and the FCC
is full of corrupted crooked bureaucrats.

> Yep.
>
> There's also another factor: availability of callsigns in the new area.

This is a more restrictive issue than most realize. There are only 2028
possible 1x2 callsigns and only 2028 possible 2x1 callsigns in each
district. As of this point in time, most districts have none available for
sequential issue and only a few available for vanity calls.

Even the 1x3s, of which there are 52,728 possible combinations per district,
are no longer available for sequential issue.

Actually the number of callsigns is slightly smaller since there are certain
suffixes that for various reasons are not made available for the general ham
population.

>
> Did I do the wrong thing?

Absolutely not IMHO. I've moved several times: from 8 land to 9 land to 0 land and back to 8 land. It would make no sense to me to keep changing my call sign. And if one were restricted to sequentially issued calls, all that was available by the time I moved into each of these areas were the 2x2s beginning with A. I don't happen to like them.

Don't need internet access even today. There are callbooks available on CD ROM for a non-internet connected computer. Besides that, what's wrong with just asking the guy (or gal)? In addition, if one is hunting states for WAS or whatever, monitor the contests that include section as part of the report and jump in when you find one. Or call CQ specifically for the states of interest.

>Amateurs...Revocation of licensure....Just like the others who HAVE
>lost their tickets, Jim.

And that's the difference you're missing. A US ham who loses his US license can't operate in US territory. And since many countries reciprocal-license based on US licensing, those countries are lost, too. That's why he-whose-name-must-not-be-mentioned who lost his license for character issues has tried so hard to get it back.

A foreigner who holds dual licenses is not in the same situation.

Right!

Specifically, there were complaints *in the restructuring comments*. FCC took heed of them and acted.

So Hans and Jim and others complain.

> Allow me to reiterate uncase your scrollback isn't working:

> Enough that the FCC has, on several occassions, demanded to know
>why a particular licensee made several license changes within specific
>time frames.

How often has that happened?

Are you sure FCC didn't have anither reason, such as someone trying to evade
detection? Example: Someone gets booted off the local repeaters for acting
inappropriately, then goes and gets a new callsign to hide his identity.

> If it was no big deal, why would they fuss?

Lots of reasons. Another is TVI.
>
> As a matter of fact...I often wonder why they fuss over frequent
>Vanity changes...It's the one thing they ARE getting paid for, and the
>fee charged far exceeds the expected outlay of materials and manpower
>to accomplish.

For one thing, frequent vanity changing locks up calls from reissue for two
years.
>
> If some idiot has more money than common sense and wants to
>change his call every three months...let him. He paid for it.

Even though it denies others access to those calls for two years? Once or twice
is a mistake, several times is something else.

>> > And no one looking for a 2-land call would wind up working someone in
>> >PA!
>>
>> Is that *really* such a problem? Many of the rarest states are in call

>know
>> which state the ham was in.
>
> Been nipping the cooking sherry a bit, have we, Jim...???

Why couldn't that be done? It would make SS easy as pie. In fact, some hams
have done it already on a voluntary basis. Guess what state N0SD is in...

They'd do better with shorter calls.

Look at the leaders and see how many have 2x3s compared to those with 1x2s.
